Introduction

Does Umbrella Support IPv6?

Introduction

This document describes Cisco Umbrella's support for IPv6.

Does Umbrella Support IPv6?

Umbrella supports recursive IPv6 DNS resolution and security and content filtering for IPv6 traffic. Umbrella's IPv6 DNS server addresses are:

- 2620:119:35::35
- 2620:119:53::53

IPv6 addresses can be registered as network identities. Refer to the Umbrella documentation for more information on network identities: Add an Identity and Protect Your Network
