Preface

This preface includes the following sections:

- Audience, on page v
- Organization, on page v
- Related Documentation, on page v

Audience

This troubleshooting guide is designed for users who are responsible for troubleshooting issues that arise in the Cisco Firepower eXtensible Operating System.

Organization

This reference guide is organized into the following parts and chapters:

- Cisco Firepower eXtensible Operating System Faults
  - Chapter 1, Introduction to Cisco Firepower eXtensible Operating System Faults, on page 1
  - Chapter 2, FXOS Faults, on page 9
  - Chapter 3, FXOS Finite State Machine Faults, on page 227
  - Chapter 4, Troubleshooting Transient Faults, on page 619

Related Documentation

A roadmap that lists all documentation for the Cisco Firepower eXtensible Operating System is available at the following URL:

https://www.cisco.com/c/en/us/td/docs/security/secure-firewall/landing-page/threat-defense/csf-3100-docs.html

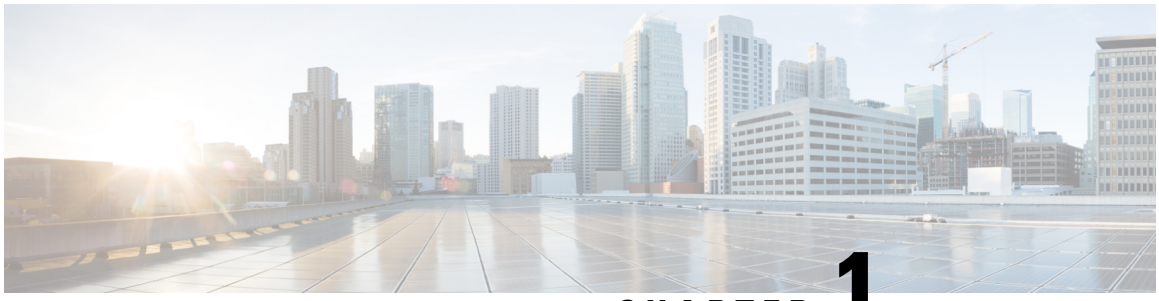

Communications, Services, and Additional Information

- To receive timely, relevant information from Cisco, sign up at Cisco Profile Manager.

- To get the business results you're looking for with the technologies that matter, visit Cisco Services.
- To submit a service request, visit Cisco Support.
- To discover and browse secure, validated enterprise-class apps, products, solutions and services, visit Cisco Marketplace.
- To obtain general networking, training, and certification titles, visit Cisco Press.
- To find warranty information for a specific product or product family, access Cisco Warranty Finder.

Cisco Bug Search Tool

Cisco Bug Search Tool (BST) is a web-based tool that acts as a gateway to the Cisco bug tracking system that maintains a comprehensive list of defects and vulnerabilities in Cisco products and software. BST provides you with detailed defect information about your products and software.

CHAPTER 1

Introduction to Cisco Firepower eXtensible Operating System Faults

This chapter provides an overview of Cisco Firepower eXtensible Operating System faults. This chapter contains the following sections:

- Overview of Faults, on page 1
- Overview of the Finite State Machine, on page 5

Overview of Faults

This section includes the following topics:

About Faults in FXOS

A fault is a mutable object that is managed by the Cisco Firepower eXtensible Operating System. Each fault represents a failure or an alarm threshold that has been raised. During the lifecycle of a fault, it can change from one state or severity to another.

Each fault includes information about the operational state of the affected object at the time the fault was raised. If the fault is transitional and the failure is resolved, then the object transitions to a functional state.

A fault remains in FXOS until the fault is cleared and deleted according to the settings in the fault collection policy.

You can view all faults from either the FXOS CLI or the Firepower Chassis Manager. You can also configure the fault collection policy to determine how a FXOS instance collects and retains faults.

Note All Cisco Firepower eXtensible Operating System faults can be trapped by SNMP.

Fault Severities

A fault can transition through more than one severity during its lifecycle. The following table describes the possible fault severities in alphabetical order.

Table 1: Fault Severities in FXOS

Severity	Description
Cleared	A notification that the condition that caused the fault has been resolved, and the fault has been cleared.
Condition	An informational message about a condition, possibly independently insignificant.
Critical	A service-affecting condition that requires immediate corrective action. For example, this severity could indicate that the managed object is out of service and its capability must be restored.
Info	A basic notification or informational message, possibly independently insignificant.
Major	A service-affecting condition that requires urgent corrective action. For example, this severity could indicate a severe degradation in the capability of the managed object and that its full capability must be restored.
Minor	A non-service-affecting fault condition that requires corrective action to prevent a more serious fault from occurring. For example, this severity could indicate that the detected alarm condition is not currently degrading the capacity of the managed object.
Warning	A potential or impending service-affecting fault that currently has no significant effects in the system. Action should be taken to further diagnose, if necessary, and correct the problem to prevent it from becoming a more serious service-affecting fault.

Fault Types

A fault can be one of the types described in the following table.

Table 2: Types of Faults in FXOS

Type	Description
fsm	An FSM task has failed to complete successfully, or the FXOS is retrying one of the stages of the FSM.
equipment	FXOS has detected that a physical component is inoperable or has another functional issue.
server	FXOS is unable to complete a server task, such as associating a service profile with a server.
configuration	FXOS is unable to successfully configure a component.
environment	FXOS has detected a power problem, thermal problem, voltage problem, or a loss of CMOS settings.

Type	Description
management	FXOS has detected a serious management issue, such as one of the following: • Critical services could not be started. • The primary switch could not be identified. • Components in the instance include incompatible firmware versions.
connectivity	FXOS has detected a connectivity problem, such as an unreachable adapter.
network	FXOS has detected a network issue, such as a link down.
operational	FXOS has detected an operational problem, such as a log capacity issue or a failed server discovery.

Properties of Faults

FXOS provides detailed information about each fault raised on the security appliance. The following table describes the fault properties that can be viewed in the FXOS CLI or the Firepower Chassis Manager.

Table 3: Fault Properties

Property Name	Description
Severity	The current severity level of the fault. This can be any of the severities described in Table 1: Fault Severities in FXOS, on page 2.
Last Transition	The day and time on which the severity for the fault last changed. If the severity has not changed since the fault was raised, this property displays the original creation date.
Affected Object	The component that is affected by the condition that raised the fault.
Description	The description of the fault.
ID	The unique identifier assigned to the fault.
Status	Additional information about the fault state. This can be any of the states described in Table 4: Fault Lifecycle States, on page 4.
Type	The type of fault that has been raised. This can be any of the types described in Table 2: Types of Faults in FXOS, on page 2.
Cause	The unique identifier associated with the condition that caused the fault.
Created at	The day and time when the fault occurred.
Code	The unique identifier assigned to the fault.
Number of Occurrences	The number of times the event that raised the fault occurred.
Original Severity	The severity assigned to the fault on the first time that it occurred.

Property Name	Description
Previous Severity	If the severity has changed, this is the previous severity.
Highest Severity	The highest severity encountered for this issue.

Lifecycle of Faults

FXOS faults are stateful, and a fault transitions through more than one state during its lifecycle. In addition, only one instance of a given fault can exist on each object. If the same fault occurs a second time, FXOS increases the number of occurrences by one.

A fault has the following lifecycle:

1. A condition occurs in the system and FXOS raises a fault in the active state.
2. If the fault is alleviated within a short period of time know as the flap interval, the fault severity remains at its original active value but the fault enters the soaking state. The soaking state indicates that the condition that raised the fault has cleared, but the system is waiting to see whether the fault condition reoccurs.
3. If the condition reoccurs during the flap interval, the fault enters the flapping state. Flapping occurs when a fault is raised and cleared several times in rapid succession. If the condition does not reoccur during the flap interval, the fault is cleared.
4. Once cleared, the fault enters the retention interval. This interval ensures that the fault reaches the attention of an administrator even if the condition that caused the fault has been alleviated, and that the fault is not deleted prematurely. The retention interval retains the cleared fault for the length of time specified in the fault collection policy.
5. If the condition reoccurs during the retention interval, the fault returns to the active state. If the condition does not reoccur, the fault is deleted.

When a fault is active, the additional lifecycle state information listed in the following table may be provided in the Status field of the fault notification.

Table 4: Fault Lifecycle States

State	Description
Soaking	A fault was raised and then cleared within a short time known as the flap interval. Since this may be a flapping condition, the fault severity remains at its original active value, but this state indicates that the condition that raised the fault has cleared. If the fault does not reoccur, the fault moves into the cleared state. Otherwise, the fault moves into the flapping state.
Flapping	A fault was raised, cleared, and then raised again within a short time known as the flap interval.

Fault Collection Policy

The fault collection policy controls the lifecycle of a fault, including the length of time that each fault remains in the flapping and retention intervals.

Faults in Cisco Firepower eXtensible Operating System

This section includes the following topics:

Faults in Firepower Chassis Manager

To view the faults for all objects in the system, navigate to the Overview page in the Firepower Chassis Manager. Each fault severity is represented by a different icon. Above the fault listing you can see how many critical and major faults have occurred in the system. When you double-click a specific fault, Firepower Chassis Manager opens the Faults Properties dialog box and displays details for that fault.

Faults in FXOS CLI

If you want to view the faults for all objects in the system, at the top-level scope, enter the **`show fault`** command. If you want to view faults for a specific object, scope to that object and then enter the **`show fault`** command.

If you want to view all of the available details about a fault, enter the **`show fault detail`** command.

Overview of the Finite State Machine

This section includes the following topics:

About the Finite State Machine in Cisco Firepower eXtensible Operating System

A finite state machine (FSM) is a workflow model, similar to a flow chart, that is composed of the following:

- Finite number of stages (states)
- Transitions between those stages
- Operations

The current stage in the FSM is determined by past stages and the operations performed to transition between the stages. A transition from one stage to another stage is dependent on the success or failure of an operation.

FXOS uses FSM tasks that run in the Data Management Engine (DME) to manage end points in the Firepower object model, including the following:

- Physical components (chassis, I/O module, servers)
- Logical components (LAN cloud, policies)
- Workflows (server discovery, service profile management, downloads, upgrades, backups)

The DME manages the FSM stages and transition, and instructs the Application Gateway (AG) to perform operations on the managed end points. Therefore, each stage can be considered to be an interaction between the DME, the AG, and the managed end point. The AGs do the real work of interacting with managed end points.

When all of the FSM stages have run successfully, the FXOS considers that the FSM operation is successful.

If the FSM encounters an error or a timeout at a stage, the FSM retries that stage at scheduled intervals. When the retry count has been reached for that stage, the FSM stops and the FXOS declares that the change has failed. If an FSM task fails, the FXOS raises the appropriate faults and alarms.

Multiple FSM tasks can be associated to an end point. However, only one FSM task at a time can run. Additional FSM tasks for the same end point are placed in a queue and are scheduled to be run when the previous FSM task is either successfully completed or the task fails.

You can view the FSM details for a particular end point to determine if a task succeeded or failed. You can also use the FSM to troubleshoot any failures.

FSM Stage Names

The FSM stage names are constructed using the following notation:

Fsm *ObjectWorkflowOperationWhere-is-it-executed*

where:

- *Object* is the object that the FSM is running, such as the Blade or Chassis.
- *Workflow* is the overall task being performed by the FSM, such as Discover or Association.
- *Operation* is the task being performed at a particular stage, such as Pnuos-Config.
- *Where-is-it-executed* is generally “”, or “A” or “B” or “Local” or “Peer”. If this is not specified, it is executed on the managingInst node.

Each FSM stage name has a prefix that identifies the FSM and a suffix that identifies a stage within the FSM. The prefix notation is **Fsm** *ObjectWorkflow* and the suffix notation is *OperationWhere-is-it-executed*. For example, if the FSM name is **FsmComputeBladeDiscoverBmcInventory**:

- The prefix is FsmComputeBladeDiscover
- The suffix is BmcInventory

FSM in Cisco Firepower eXtensible Operating System

The FXOS CLI can display the FSM information for an end point when you are in the command mode for that end point.

Enter the **show fsm status** command in the appropriate mode to view the current FSM task for an end point. The information displayed about a current FSM task in the CLI is static. You must re-enter the command to see the progress updates. The following example displays the information about the current FSM task for the server in chassis 1, slot 6:

```
Firepower# scope server 1/1
Firepower /chassis/server # show fsm status
Slot: 1
```

```
Server: sys/chassis-1/blade-1
FSM 1:
Remote Result: Not Applicable
Remote Error Code: None
Remote Error Description:
Status: Discover Blade Boot Wait
Previous Status: Discover Blade Boot Wait
Timestamp: 2006-01-26T23:31:36
Try: 0
Flags: 0
Progress (%): 33
Current Task: Waiting for system reset on server 1/1
(FSM-STAGE:sam:dme:ComputeBladeDiscover:BladeBootWait)
```

Enter the **show fsm task** command in the appropriate mode to view all of the pending tasks in the FSM queue. The following example displays the FSM task queue for chassis 1, slot 1:

```
Firepower# scope server 1/1
Firepower /chassis/server # show fsm task

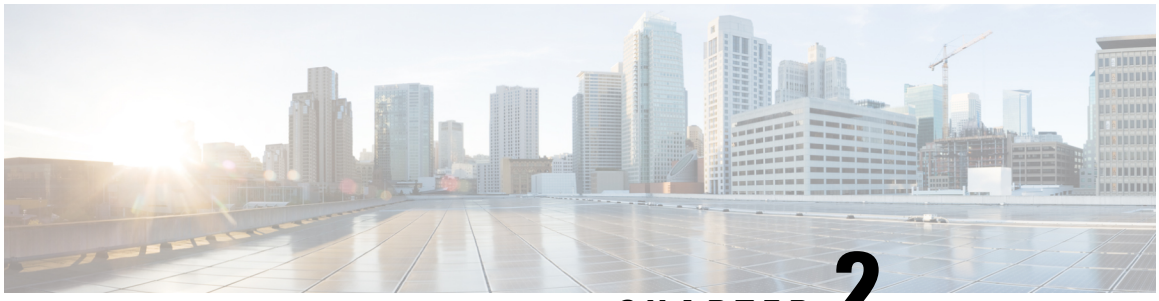

FSM Task:
Item ID Completion FSM Flags
---------------- -------- ------------ ---------
Powercycle 1154858 Scheduled
BiosRecovery 1154860 Scheduled
```

FSM Transition Stages in FXOS upgrade

Following table describes the list of transition stages included in the application and FXOS upgrade process.

Upgrade Transition States	Description
ResolveDistributableNames	Resolving distributable name from infra pack
ResolveDistributable	Resolve distributable from operations manager
ResolveImages	Resolve images from operations manager
ValidatePlatformPack	Validating the platform pack
DebundlePort	Debundle the ports
PollDebundlePort	Waiting for Ports debundle complete
ActivateUCSM	Activating FPRM
PollActivateOfUCSM	Waiting for FPRM Activate to complete
ActivateMgmtExt	Activating MgmtExt
PollActivateOfMgmtEx	Waiting for MgmtExt Activate to complete
UpdateIOM	Updating back-up image of IOMs
PollUpdateOfIOM	Waiting for update of IOMs to complete
ActivateIOM	Activating IOMs
PollActivateOfIOM	Waiting for Activation to complete on IOMs

Upgrade Transition States	Description
ActivateRemoteFI	Activating Peer Fabric Interconnect
PollActivateOfRemoteFI	Waiting for Activation to complete on Peer Fabric Interconnect
WaitForUserAck	Waiting for User Acknowledgement To Start Primary Fabric Interconnect Activation
ActivateLocalFI	Activating Local Fabric Interconnect
PollActivateOfLocalFI	Waiting for Activation to complete on Local Fabric Interconnect

CHAPTER 2

FXOS Faults

This chapter provides information about the faults that may be raised in FXOS.

- FXOS Faults, on page 9

FXOS Faults

fltFabricVlanReqVlanPermitUnresolved

Fault Code: F0019

Message: The VLAN permit does not reference any existing vlans.

Explanation: This fault occurs when a VLAN permit exists but there are no vnics by the name.

Recommended Action: Delete the VLAN permit, create the referenced VLAN (or ignore).

Fault Details

```
Severity: warning
Cause: vlan-permit-unresolved
mibFaultCode: F0019
mibFaultName: fltFabricVlanReqVlanPermitUnresolved
moClass: fabric:VlanReq
Type: configuration
autoCleared: true
Affected MO: org-[name]/vlan-req-[name]
```

fltFabricVlanGroupReqVlanGroupPermitUnresolved

Fault Code: F0021

Message: The VLAN permit does not reference any existing net groups.

Explanation: This fault occurs when a VLAN group permit exists but there are no referenced network groups.

Recommended Action: Delete the VLAN permit, create the referenced VLAN (or ignore).

Fault Details

```
Severity: warning
Cause: group-permit-unresolved
mibFaultCode: F0021
```

```
mibFaultName: fltFabricVlanGroupReqVlanGroupPermitUnresolved
moClass: fabric:VlanGroupReq
Type: configuration
autoCleared: true
Affected MO: org-[name]/vlan-group-req-[name]
```

fltDcxNsFailed

Fault Code: F0056

Message: Server [chassisId]/[slotId] (service profile: [assignedToDn]) virtual network interface allocation failed.Server [id] (service profile: [assignedToDn]) virtual network interface allocation failed.

Explanation: The adapter's vif-namespace activation failed due to insufficient resources. Cisco FPR Chassis Manager raises this fault when the number of deployed VIF resources exceeds the maximum VIF resources available on the adapter connected to the fabric interconnect.

Recommended Action: If you see this fault, take the following actions:

1. Check the NS "size" and "used" resources to determine by how many vNICs the adapter exceeded the maximum.
2. Unconfigure or delete all vNICs on the adapter above the maximum number.
3. Add additional fabric uplinks from the IOM to the corresponding fabric interconnect and reacknowledge the chassis. This increases the "NS size" on the adapter.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: insufficient-resources
mibFaultCode: F0056
mibFaultName: fltDcxNsFailed
moClass: dcx:Ns
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/adaptor-[id]/dcxns-[switchId]
Affected MO: sys/rack-unit-[id]/adaptor-[id]/dcxns-[switchId]
```

fltComputePhysicalInsufficientlyEquipped

Fault Code: F0057

Message: Server [id] (service profile: [assignedToDn]) has insufficient number of DIMMs, CPUs and/or adaptersServer [chassisId]/[slotId] (service profile: [assignedToDn]) has insufficient number of DIMMs, CPUs and/or adapters

Explanation: This fault typically occurs because Cisco FPR Chassis Manager has detected that the server has an insufficient number of DIMMs, CPUs, and/or adapters.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the DIMMs are installed in a supported configuration.
2. Verify that an adapter and CPU are installed.
3. Reacknowledge the server.

4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: insufficiently-equipped
mibFaultCode: F0057
mibFaultName: fltComputePhysicalInsufficientlyEquipped
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalIdentityUnestablishable

Fault Code: F0058

Message: Server [id] (service profile: [assignedToDn]) has an invalid FRUServer [chassisId]/[slotId] (service profile: [assignedToDn]) has an invalid FRU

Explanation: This fault typically occurs because Cisco FPR Chassis Manager has detected an unsupported server or CPU.

Recommended Action: If you see this fault, take the following actions:

1. Verify that a supported server and/or CPU is installed.
2. Verify that the Cisco FPR Chassis Manager capability catalog is up to date.
3. Reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: identity-unestablishable
mibFaultCode: F0058
mibFaultName: fltComputePhysicalIdentityUnestablishable
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/rack-unit-[id]
```

fltComputeBoardPowerError

Fault Code: F0059

Message: Motherboard of server [chassisId]/[slotId] (service profile: [assignedToDn]) power: [operPower]Motherboard of server [id] (service profile: [assignedToDn]) power: [operPower]

Explanation: This fault typically occurs when the server power sensors have detected a problem.

Recommended Action: If you see this fault, take the following actions:

1. Make sure that the server is correctly installed in the chassis and that all cables are secure.
2. If you reinstalled the server, reacknowledge it.

3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: power-problem
mibFaultCode: F0059
mibFaultName: fltComputeBoardPowerError
moClass: compute:Board
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board
Affected MO: sys/rack-unit-[id]/board
```

fltComputeBoardPowerFail

Fault Code: F0060

Message: Motherboard of server [chassisId]/[slotId] (service profile: [assignedToDn]) power: [power]Motherboard of server [id] (service profile: [assignedToDn]) power: [power]

Explanation: This fault typically occurs when the power sensors on a blade server detect a problem.

Recommended Action: If you see this fault, take the following actions:

1. Remove the blade server from the chassis.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: power-problem
mibFaultCode: F0060
mibFaultName: fltComputeBoardPowerFail
moClass: compute:Board
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board
Affected MO: sys/rack-unit-[id]/board
```

fltComputeABoardThermalProblem

Fault Code: F0061

Message: Motherboard [faultQualifier] of server [chassisId]/[slotId] (service profile: [assignedToDn]) thermal: [thermal]Motherboard of server [id] (service profile: [assignedToDn]) thermal: [thermal]

Explanation: This fault typically occurs when the motherboard thermal sensors on a server detect a problem.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the server fans are working properly.
2. Wait for 24 hours to see if the problem resolves itself.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: thermal-problem
mibFaultCode: F0061
mibFaultName: fltComputeABoardThermalProblem
moClass: compute:ABoard
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board
Affected MO: sys/chassis-[id]/blade-[slotId]/ext-board-[id]
Affected MO: sys/rack-unit-[id]/board
Affected MO: sys/rack-unit-[id]/ext-board-[id]
```

fltComputeABoardPowerUsageProblem

Fault Code: F0062

Message: Motherboard [faultQualifier] of server [chassisId]/[slotId] (service profile: [assignedToDn]) powerUsage: [powerUsage]Motherboard of server [id] (service profile: [assignedToDn]) powerUsage: [powerUsage]

Explanation: This fault typically occurs when the motherboard power consumption exceeds certain threshold limits. At that time the power usage sensors on a server detect a problem.

Recommended Action: If you see this fault, take the following actions:

1. Create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: power-problem
mibFaultCode: F0062
mibFaultName: fltComputeABoardPowerUsageProblem
moClass: compute:ABoard
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board
Affected MO: sys/chassis-[id]/blade-[slotId]/ext-board-[id]
Affected MO: sys/rack-unit-[id]/board
Affected MO: sys/rack-unit-[id]/ext-board-[id]
```

fltComputePhysicalPowerProblem

Fault Code: F0063

Message: Server [id] (service profile: [assignedToDn]) oper state: [operState]Server [chassisId]/[slotId] (service profile: [assignedToDn]) oper state: [operState]

Explanation: This fault typically occurs when the server power sensors have detected a problem.

Recommended Action: If you see this fault, take the following actions:

1. Make sure that the server is correctly installed in the chassis and that all cables are secure.
2. If you reinstalled the server, reacknowledge it.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: power-problem
mibFaultCode: F0063
mibFaultName: fltComputePhysicalPowerProblem
moClass: compute:Physical
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalBiosPostTimeout

Fault Code: F0065

Message: Server [id] (service profile: [assignedToDn]) BIOS failed power-on self testServer [chassisId]/[slotId] (service profile: [assignedToDn]) BIOS failed power-on self test

Explanation: This fault typically occurs when the server has encountered a diagnostic failure.

Recommended Action: If you see this fault, take the following actions:

1. Check the POST results for the server. In Cisco FPR Chassis Manager GUI, you can access the POST results from the General tab for the server. In Cisco FPR Chassis Manager CLI, you can access the POST results through the show post command under the scope for the server.
2. Reacknowledge the server and refer to the FXOS CLI and FPR Chassis Manager documentation.
3. If the above actions did not resolve the issue, collect chassis tech support and module tech support files and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: equipment-inoperable
mibFaultCode: F0065
mibFaultName: fltComputePhysicalBiosPostTimeout
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalDiscoveryFailed

Fault Code: F0066

Message: Server [id] (service profile: [assignedToDn]) discovery: [discovery]Server [chassisId]/[slotId] (service profile: [assignedToDn]) discovery: [discovery]

Explanation: This fault typically occurs for one of the following reasons:

- The shallow discovery that occurs when the server associated with service profile failed.
- The server is down.
- The data path is not working.
- Cisco FPR Chassis Manager cannot communicate with the CIMC on the server.
- The server cannot communicate with the fabric interconnect.

Recommended Action: If you see this fault, take the following actions:

1. Check the FSM tab and the current state of the server and any FSM operations.
2. Check the error descriptions and see if any server components indicate a failure.
3. If the server or a server component has failed, do the following:
   a. Check the operational state of the server.
   b. If the server is not operable, re-acknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: discovery-failed
mibFaultCode: F0066
mibFaultName: fltComputePhysicalDiscoveryFailed
moClass: compute:Physical
Type: operational
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalAssociationFailed

Fault Code: F0067

Message: Service profile [assignedToDn] failed to associate with server [id]Service profile [assignedToDn] failed to associate with server [chassisId]/[slotId]

Explanation: This fault typically occurs for one of the following reasons:

- The service profile could not be associated with the server.
- The server is down.
- The data path is not working.
- Cisco FPR Chassis Manager cannot communicate with one or more of the fabric interconnect, the server, or a component on the server.

Recommended Action: If you see this fault, take the following actions:

1. Check the FSM tab and the current state of the server and any FSM operations.
2. If the server is stuck in an inappropriate state, such as booting, power cycle the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: association-failed
mibFaultCode: F0067
mibFaultName: fltComputePhysicalAssociationFailed
moClass: compute:Physical
```

```
Type: configuration
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalDisassociationFailed

Fault Code: F0068

Message: Failed to disassociate server [id]Failed to disassociate server [chassisId]/[slotId]

Explanation: This fault typically occurs for one of the following reasons:

- The server is down.
- The data path is not working.
- Cisco FPR Chassis Manager cannot communicate with one or more of the fabric interconnect, the server, or a component on the server.

Recommended Action: If you see this fault, take the following actions:

1. Check the communication path to the server including fabric interconnect server ports, IOM link and the current state of the server
2. If the server is stuck in an inappropriate state, such as booting, power cycle the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: disassociation-failed
mibFaultCode: F0068
mibFaultName: fltComputePhysicalDisassociationFailed
moClass: compute:Physical
Type: configuration
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalInoperable

Fault Code: F0069

Message: Server [id] (service profile: [assignedToDn]) health: [operability]Server [chassisId]/[slotId] (service profile: [assignedToDn]) health: [operability]

Explanation: This fault typically occurs when the server has encountered a diagnostic failure.

Recommended Action: If you see this fault, take the following actions:

1. Check the POST results for the server.In Cisco FPR Chassis Manager GUI, you can access the POST results from the General tab for the server. In Cisco FPR Chassis Manager CLI, you can access the POST results through the show post command under the scope for the server.
2. Reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-inoperable
mibFaultCode: F0069
mibFaultName: fltComputePhysicalInoperable
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalUnassignedMissing

Fault Code: F0070

Message: Server [id] (no profile) missingServer [chassisId]/[slotId] (no profile) missing

Explanation: This fault typically occurs when the server, which is not associated with a service profile, was previously physically inserted in the slot, but cannot be detected by Cisco FPR Chassis Manager.

Recommended Action: If you see this fault, take the following actions:

1. If the server is physically present in the slot, remove and then reinsert it.
2. If the server is not physically present in the slot, insert it.
3. Reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: equipment-missing
mibFaultCode: F0070
mibFaultName: fltComputePhysicalUnassignedMissing
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalAssignedMissing

Fault Code: F0071

Message: Server [id] (service profile: [assignedToDn]) missingServer [chassisId]/[slotId] (service profile: [assignedToDn]) missing

Explanation: This fault typically occurs when the server, which is associated with a service profile, was previously physically inserted in the slot, but cannot be detected by Cisco FPR Chassis Manager.

Recommended Action: If you see this fault, take the following actions:

1. If the server is physically present in the slot, remove and then reinsert it.
2. If the server is not physically present in the slot, reinsert it.
3. Reacknowledge the server.

4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-missing
mibFaultCode: F0071
mibFaultName: fltComputePhysicalAssignedMissing
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalUnidentified

Fault Code: F0072

Message: Server [id] (service profile: [assignedToDn]) has an invalid FRU: [presence]Server [chassisId]/[slotId] (service profile: [assignedToDn]) has an invalid FRU: [presence]

Explanation: This fault typically occurs because Cisco FPR Chassis Manager has detected an unsupported server or CPU.

Recommended Action: If you see this fault, take the following actions:

1. Verify that a supported server and/or CPU is installed.
2. Verify that the Cisco FPR Chassis Manager capability catalog is up to date.
3. Reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: identity-unestablishable
mibFaultCode: F0072
mibFaultName: fltComputePhysicalUnidentified
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalNetworkMisconfigured

Fault Code: F0075

Message: Server [id] (service profile: [assignedToDn]) has mis-configured network vif resourcesServer [chassisId]/[slotId] (service profile: [assignedToDn]) has mis-configured network vif resources

Explanation: This fault would occur when FPRM VIF-id Map is not the same as the VIF-id map deployed on the adaptor upon Full Backup->Restore etc.

Recommended Action: If you see this fault, take the following actions:

1. Re-acknowledge the server. This will trigger Deep Discovery->Deep Association & will resolve the issue

2. If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: minor
Cause: vif-ids-mismatch
mibFaultCode: F0075
mibFaultName: fltComputePhysicalNetworkMisconfigured
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalAdapterMismatch

Fault Code: F0076

Message: Server [id] (service profile: [assignedToDn]) has invalid adapter combinatonServer [chassisId]/[slotId] (service profile: [assignedToDn]) has invalid adapter combination

Explanation: This fault typically occurs because Cisco FPR Chassis Manager has detected that the server has an invalid combination of Cisco VICs.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the valid adapter combinations are installed configuration.
2. Reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: adaptor-mismatch
mibFaultCode: F0076

```

fltComputePoolEmpty

Fault Code: F0083

Message: server pool [name] is empty

Explanation: This fault typically occurs when the selected server pool does not contain any servers.

Recommended Action: If you see this fault, take the following actions:

1. Verify the qualifier settings in the server pool policy qualifications. If the policy was modified after the server was discovered, reacknowledge the server.
2. Manually associate the service profile with a server.
3. If the server pool is not used, ignore the fault.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: empty-pool
mibFaultCode: F0083
mibFaultName: fltComputePoolEmpty
moClass: compute:Pool
Type: server
autoCleared: true
Affected MO: org-[name]/compute-pool-[name]
```

fltComputePhysicalPost-failure

Fault Code: F0084

Message: Server [id] POST or diagnostic failureServer [chassisId]/[slotId] POST or diagnostic failure

Explanation: This fault typically occurs when the server has encountered a diagnostic failure or an error during POST.

Recommended Action: If you see this fault, take the following actions:

1. Check the POST results for the server. In Cisco FPR Chassis Manager GUI, you can access the POST results from the General tab for the server. In Cisco FPR Chassis Manager CLI, you can access the POST results through the show post command under the scope for the server.

2. Reboot the server.
3. If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

fltFirmwarePackItemImageMissing

Fault Code: F0095

Message: [type] image with vendor [hwVendor], model [hwModel] and version [version] is deleted

Explanation: This fault typically occurs when the image to which a firmware package item refers is missing.

Recommended Action: If you see this fault, take the following actions:

1. In Cisco FPR Manager GUI, navigate to the Firmware Management > Images tab and determine whether the missing image is available or not.
2. If the image is present, click on it to verify the model and vendor.
3. If the image for the required model and vendor is not present, download that image or bundle from the Cisco.com website.
4. If the image is present and the fault persists, create a **show tech-support** file and contact Cisco TAC.

fltFirmwareUpdatableImageUnusable

Fault Code: F0096

Message: backup image is unusable. reason: [operStateQual]

Explanation: This fault typically occurs when the backup firmware image on an endpoint is unusable.

Recommended Action: If you see this fault, take the following actions:

1. Review the fault and the error message on the FSM tab for the endpoint to determine why the firmware image is unusable.
2. If the firmware image is bad or corrupted, download another copy from the Cisco website and update the backup version on the endpoint with the new image.
3. If the image is present and the fault persists, create a **show tech-support** file and contact Cisco TAC.

fltFirmwareBootUnitCantBoot

Fault Code: F0097

Message: unable to boot the startup image. End point booted with backup image

Explanation: This fault typically occurs when the startup firmware image on an endpoint is corrupted or invalid, and the endpoint cannot boot from that image.

Recommended Action: If you see this fault, take the following actions:

1. Review the fault and the error message on the FSM tab for the endpoint to determine why the firmware image is unusable. The error message usually includes an explanation for why the endpoint could not boot from the startup image, such as Bad-Image or Checksum Failed.
2. If the firmware image is bad or corrupted, download another copy from the Cisco website and update the startup version on the endpoint with the new image.
3. If the fault persists, create a **show tech-support** file and contact Cisco TAC.

fltFirmwareBootUnitActivateStatusFailed

Fault Code: F0098

Message: Activation failed and Activate Status set to failed.

Explanation: This fault typically occurs for the following reasons: when firmware activation fails, or if the after activation running image is not the corresponding startup image.

- Firmware activation failed.
- The version of firmware running on the server after activation is not the version listed in Cisco FPR Manager as the startup image.

Recommended Action: If you see this fault, take the following actions:

1. Go to FSM tab for the endpoint on which the fault is raised and review the error description for the reason that the activation failed.

2. If the FSM failed, review the error message in the FSM.
3. If possible, correct the problem described in the error message.
4. If the problem persists, create a **show tech-support** file and contact Cisco TAC.

fltFirmwareStatusCimcFirmwareMismatch

Fault Code: F0099

Message: Aggregate blade CIMC firmware mismatch. Firmware: [cimcVersion]

Explanation: This fault typically occurs when the CIMC firmware image on master and slave node in an aggregate blade does not match.

Recommended Action: Update and activate master and slave CIMC to same firmware version.

Fault Details

```
Severity: critical
Cause: cimc-firmware-mismatch
mibFaultCode: F0099
mibFaultName: fltFirmwareStatusCimcFirmwareMismatch
moClass: firmware:Status
Type: management

```

fltFirmwareAutoSyncPolicyDefaultHostPackageMissing

Fault Code: F0101

Message: Default host firmware package is missing or deleted.

Explanation: This fault typically occurs for the following reasons: when Auto Firmware Sync Policy is set Auto-acknowledge or User-acknowledge and default host firmware pack is not available.

- Auto Firmware Sync is not happening.
- Default host firmware package is missing or deleted.

Recommended Action: If you see this fault, take the following actions:

1. Go to Servers tab and expand policies node. Select Host Firmware Packages under policies node.
2. If the FSM failed, review the error message in the FSM.
3. Create a host firmware package with name 'default'. If the problem persists, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

Affected MO: org-[name]/fw-auto-sync
```

fltPowerChassisMemberPowerGroupCapInsufficient

Fault Code: F0149

Message: Chassis [id] cannot be capped as group cap is low. Please consider raising the cap.

Explanation: This fault typically occurs when an updated group cap is insufficient to meet the minimum hardware requirements and a chassis that has just been added to the power group cannot be capped as a result.

Recommended Action: If you see this fault, take the following actions:

1. Consider increasing the group cap.
2. Reduce the number of blade servers or chassis in the Cisco FPR instance.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: group-cap-insufficient

Type: environmental
autoCleared: true
Affected MO: sys/power-ep/group-[name]/ch-member-[id]
```

fltPowerChassisMemberChassisFirmwareProblem

Fault Code: F0150

Message: Chassis [id] cannot be capped as at least one of the CMC or CIMC or BIOS firmware version is less than 1.4. Please upgrade the firmware for cap to be applied.

Explanation: This fault typically occurs when the CIMC firmware on a server is an earlier release than Cisco FPR, Release 1.4.

Recommended Action: If you see this fault, consider upgrading the CIMC firmware, and the entire Cisco FPR instance if necessary, to Cisco FPR, Release 1.4 or later.

Fault Details

```
Severity: major
Cause: old-chassis-component-firmware

```

fltPowerChassisMemberChassisPsuRedundanceFailure

Fault Code: F0154

Message: Chassis [id] was configured for redundancy, but running in a non-redundant configuration.

Explanation: This fault typically occurs when chassis power redundancy has failed.

Recommended Action: If you see this fault, take the following actions:

1. Consider adding more PSUs to the chassis.
2. Replace any non-functional PSUs.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

Affected MO: sys/power-ep/group-[name]/ch-member-[id]
```

fltPowerBudgetPowerBudgetCmcProblem

Fault Code: F0155

Message: Power cap application failed for chassis [id]

Explanation: This fault typically occurs when the server CIMC has failed to enforce the configured power cap.

Recommended Action: If you see this fault, take the following actions:

1. Check the power consumption of the chassis. If the chassis is consuming significantly more power than configured in the power cap, consider reducing the group cap so that the power consumption of other chassis consumption can be reduced to make up for the increase.
2. If the above action did not resolve the issue, create a **show tech-support** file for Cisco FPR Manager and the chassis and then contact Cisco TAC.

Fault Details

```
Severity: major
Cause: power-cap-fail

```

fltPowerBudgetPowerBudgetBmcProblem

Fault Code: F0156

Message: Power cap application failed for server [chassisId]/[slotId]Power cap application failed for server [id]

Explanation: This fault typically occurs when the server CIMC or BIOS has failed to enforce the configured power cap.

Recommended Action: If you see this fault, take the following actions:

1. Check the power consumption of the blade server. If the server is consuming significantly more power than configured in the power cap, switch to a manual per blade cap configuration. If the power consumption is still too high, consider reducing the group cap so that the power consumption of other chassis consumption can be reduced to make up for the increase.
2. If the power consumption is still too high, the CIMC or BIOS software is likely faulty.
3. Create a **show tech-support** file for Cisco FPR Manager and the chassis and then contact Cisco TAC.

fltPowerBudgetTStateTransition

Fault Code: F0158

Message: Blade [chassisId]/[slotId] has been severely throttled. CIMC can recover if budget is redeployed to the blade or by rebooting the blade. If problem persists, please ensure that OS is ACPI compliantRack server [id] has been severely throttled. CIMC can recover if budget is redeployed to the blade or by rebooting the blade. If problem persists, please ensure that OS is ACPI compliant

Explanation: This fault typically occurs when the processor T-state is used to severely throttle the CPU.

Recommended Action: If you see this fault, take the following actions:

1. Redeploy the power budget for the affected power group, blade server, or chassis.
2. If the problem persists, reboot the blade server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

```

fltPowerPolicyPowerPolicyApplicationFail

Fault Code: F0160

Message: Insufficient budget to apply no-cap priority through policy [name]. Blades will continue to be capped

Explanation: This fault occurs when a power policy cannot be applied to one or more blade servers. The affected blade servers cannot operate normally without power capping due to the limited power budget for those servers.

Recommended Action: If you see this fault, take the following actions:

1. Increase the power budget for the blade servers in the power policy.

2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor

fltVnicEtherConfig-failed

Fault Code: F0314

Message: Eth vNIC [name], service profile [name] failed to apply configuration

Explanation: This fault typically occurs when Cisco FPR Manager could not place the vNIC on the vCon.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the server was successfully discovered.
2. Verify that the correct type of adapters are installed on the server.
3. Confirm that the vCon assignment is correct.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

```

fltVnicEtherPinningMismatch

Fault Code: F0315

Message: Hard pinning target for eth vNIC [name], service profile [name] does not have all the required vlans configured

Explanation: This fault occurs when one or more VLANs required by vNIC in a service profile are not configured on the target uplink port or port channel for a hard-pinned LAN pin group.

Recommended Action: If you see this fault, take the following actions:

1. In the LAN Uplinks Manager of the Cisco FPR Manager GUI, configure all of the VLANs in the vNIC in the target uplink port or port channel for the LAN pin group. If you prefer to use the Cisco FPR Manager CLI, navigate to scope **/eth-uplink/vlan** and create the required member ports for the LAN pin group.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltVnicEtherPinningMisconfig

Fault Code: F0316

Message: Hard pinning target for eth vNIC [name], service profile [name] is missing or misconfigured

Explanation: This fault occurs when one or more vNIC target uplink ports or port channels for a hard-pinned LAN pin group are either missing or misconfigured as the wrong port type.

Recommended Action: If you see this fault, take the following actions:

1. Review the LAN pin group configuration.
2. Correct the configuration of the port and port channels in the pin group.
3. Ensure that all required vLANs are allowed on the target ports or port channels.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltVnicEtherIfVlanAccessFault

Fault Code: F0317

Message: The named vlan [name] for vNIC [name] cannot be accessed from org [name]

Explanation: This fault typically occurs when a Service Profile's vnic interface (LAN) is resolvable but the service profile does not have access to the vlan. In this case, the default vlan will be used.

Recommended Action: This fault will be removed if you perform one of the following actions:

1. Change the vnic's interface name to a VLAN that you have access to.
2. If you wish to use the default vlan, change the vnic's interface name to default.
3. Configure access to the named vlan by creating a vlan permit or vlan group permit in the service profile's org (or a parent org).

fltVnicEtherIfInvalidVlan

Fault Code: F0320

Message: Invalid Vlan in the allowed vlan list

Explanation: This fault typically occurs when a vnic of a service profile or a port profile contains an invalid vlan. an invalid vlan can be any one of the following:

1. an isolated vlan or a community vlan that is not associated to a valid primary vlan
2. a primary vlan without any of its assoicated secondary vlans allowed on the vnic
3. a vlan which has sharing-type or primary vlan name not matching to that of vlan in lan-side/appliance-side

Recommended Action: This fault will be removed if you perform one of the following actions:

1. if invalid vlan is an isolated or community vlan then make sure it is mapped to a valid primary vlan.
2. if invalid vlan is a primary vlan then either allow any of its secondary vlans or delete it from vnic or port profile.
3. if invalid vlan is a vlan that does not match the sharing properties with the vlan of same vlan id in the lan-side/appliance-side, change the properties of this vlan to be the same as the other.

Fault Details

```

fltAdaptorUnitMissing

Fault Code: F0351

Message: Adapter [id] in server [id] presence: [presence]Adapter [id] in server [chassisId]/[slotId] presence: [presence]

Explanation: The adaptor is missing. Cisco FPR Manager raises this fault when any of the following scenarios occur:

- The endpoint reports there is no adapter in the adaptor slot.
- The endpoint cannot detect or communicate with the adapter in the adaptor slot.

Recommended Action: If you see this fault, take the following actions:

1. Make sure an adapter is inserted in the adaptor slot in the server.
2. Check whether the adaptor is connected and configured properly and is running the recommended firmware version.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltAdaptorUnitAdaptorReachability

Fault Code: F0353

Message: Adapter [id]/[id] is unreachableAdapter [chassisId]/[slotId]/[id] is unreachable

Explanation: Cisco FPR Manager cannot access the adapter. This fault typically occurs as a result of one of the following issues:

- The server does not have sufficient power.
- The I/O module is not functional.
- The adapter firmware has failed.
- The adapter is not functional

Recommended Action: If you see this fault, take the following actions:

1. Check the POST results for the server. In Cisco FPR Manager GUI, you can access the POST results from the General tab for the server. In Cisco FPR Manager CLI, you can access the POST results through the **show post** command under the scope for the server.
2. In Cisco FPR Manager, check the power state of the server.
3. Verify that the physical server has the same power state.
4. If the server is off, turn the server on.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltAdaptorHostIfLink-down

Fault Code: F0354

Message: Adapter [transport] host interface [id]/[id]/[id] link state: [linkState]Adapter [transport] host interface [chassisId]/[slotId]/[id]/[id] link state: [linkState]

Explanation: This fault typically occurs as a result of one of the following issues:

- The fabric interconnect is in End-Host mode, and all uplink ports failed.
- The server port to which the adapter is pinned failed.
- A transient error caused the link to fail.

Recommended Action: If you see this fault, take the following actions:

1. If an associated port is disabled, enable the port.
2. Reacknowledge the server with the adapter that has the failed link.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: link-down

fltAdaptorExtIfLink-down

Fault Code: F0355

Message: Adapter uplink interface [id]/[id]/[id] link state: [linkState]. Please verify connectivity to Fabric Interconnect. Acknowledging FEX might be required.Adapter uplink interface [chassisId]/[slotId]/[id]/[id] on security module [slotId] link state: [linkState]. Please check switch blade-facing port status. Resetting security module might be required.

Explanation: The link for a network facing adapter interface is down. Cisco FPR Manager raises this fault when any of the following scenarios occur:

- Cisco FPR Manager cannot establish and/or validate the adapter's connectivity to any of the fabric interconnects.
- The endpoint reports a link down or vNIC down event on the adapter link.
- The endpoint reports an errored link state or errored vNIC state event on the adapter link.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the adapter is connected, configured properly, and is running the recommended firmware version.

2. If the server is stuck at discovery, decommission the server and reacknowledge the server slot.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

```

fltAdaptorHostEthIfMisConnect

Fault Code: F0356

Message: Adapter [id] eth interface [id] in server [id] mis-connected

Explanation: The link for a network-facing host interface is misconnected. Cisco FPR Manager raises this fault when any of the following scenarios occur:

- Cisco FPR Manager detects a new connectivity between a previously configured switch port and the host Ethernet interface.
- Cisco FPR Manager detects a misconnected link between the host interface and its non-peer fabric interconnect.

Recommended Action: If you see this fault, take the following actions:

1. Check whether the host Ethernet interface is connected to a port belonging to its peer fabric interconnect.
2. If connectivity seems correct, reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: link-misconnected
mibFaultCode: F0356
mibFaultName: fltAdaptorHostEthIfMisConnect
moClass: adaptor:HostEthIf
Type: network
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/adaptor-[id]/host-eth-[id]
Affected MO: sys/rack-unit-[id]/adaptor-[id]/host-eth-[id]
```

fltAdaptorHostEthIfMissing

Fault Code: F0357

Message: Connection to Adapter [id] eth interface [id] in server [id] missing

Explanation: The link for a network-facing host interface is missing. Cisco FPR Manager raises this fault when it detects missing connectivity between a previously configured switch port and its previous peer host interface.

Recommended Action: If you see this fault, take the following actions:

1. Check whether the adapter link is connected to a port that belongs to its non-peer fabric interconnect.
2. If that connectivity seems correct, reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: link-missing
mibFaultCode: F0357

Affected MO: sys/rack-unit-[id]/adaptor-[id]/host-eth-[id]
```

fltAdaptorExtEthIfMisConnect

Fault Code: F0358

Message: Adapter [id] eth interface [id] in server [id] mis-connected

Explanation: The link for a network-facing adapter interface is misconnected. Cisco FPR Manager raises this fault when any of the following scenarios occur:

- Cisco FPR Manager detects a new connectivity between a previously configured switch port or FEX port and the adapter's external interface.
- Cisco FPR Manager detects a misconnected link between a fabric interconnect or FEX and its non-peer adapter's interface.

Recommended Action: If you see this fault, take the following actions:

1. Check whether the adapter link is connected to a port that belongs to its peer fabric interconnect or FEX.
2. If that connectivity seems correct, reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: link-misconnected
mibFaultCode: F0358
mibFaultName: fltAdaptorExtEthIfMisConnect
moClass: adaptor:ExtEthIf

```

fltAdaptorExtEthIfMissing

Fault Code: F0359

Message: Connection to Adapter [id] eth interface [id] in server [id] missing

Explanation: The link for a network-facing adapter interface is misconnected. Cisco FPR Manager raises this fault when it detects that the connectivity between a previously configured port on a fabric interconnect or FEX and its prior peer network-facing adapter interface is misconnected or missing.

Recommended Action: If you see this fault, take the following actions:

1. Check whether the adapter interface is connected to a port belonging to its peer fabric interconnect or FEX.
2. If the connectivity seems correct, reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: link-missing
mibFaultCode: F0359

```

fltMemoryUnitDegraded

Fault Code: F0369

Message: DIMM [location] on server [chassisId]/[slotId] operability: [operability]DIMM [location] on server [id] operability: [operability]

Explanation: This fault occurs when a DIMM is in a degraded operability state. This state typically occurs when an excessive number of correctable ECC errors are reported on the DIMM by the server BIOS.

Recommended Action: If you see this fault, take the following actions:

1. Monitor the error statistics on the degraded DIMM through Cisco FPR Manager. If the high number of errors persists, there is a high possibility of the DIMM becoming inoperable.
2. If the DIMM becomes inoperable, replace the DIMM.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: equipment-degraded
mibFaultCode: F0369
mibFaultName: fltMemoryUnitDegraded

autoCleared: true
```

```
Affected MO: sys/chassis-[id]/blade-[slotId]/board/memarray-[id]/mem-[id]
Affected MO: sys/rack-unit-[id]/board/memarray-[id]/mem-[id]
```

fltMemoryUnitIdentity-unestablishable

Fault Code: F0370

Message: DIMM [location] on server [chassisId]/[slotId] has an invalid FRUDIMM [location] on server [id] has an invalid FRU

Explanation: This fault typically occurs because Cisco FPR Manager has detected unsupported DIMM in the server. For example, the model, vendor, or revision is not recognized.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco FPR Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, you may have unsupported DIMMs or DIMM configuration in the server. Create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: identity-unestablishable

Affected MO: sys/rack-unit-[id]/board/memarray-[id]/mem-[id]
```

fltMemoryUnitThermalThresholdNonCritical

Fault Code: F0373

Message: DIMM [location] on server [chassisId]/[slotId] temperature: [thermal]DIMM [location] on server [id] temperature: [thermal]

Explanation: This fault occurs when the temperature of a memory unit on a blade or rack server exceeds a non-critical threshold value, but is still below the critical threshold. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco FPR equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco FPR equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the server.
2. Review the Cisco FPR Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco FPR chassis or rack server are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco FPR power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltMemoryArrayVoltageThresholdNonCritical

Fault Code: F0379

Message: Memory array [id] on server [chassisId]/[slotId] voltage: [voltage]Memory array [id] on server [id] voltage: [voltage]

Explanation: This fault occurs when the memory array voltage is out of normal operating range, but hasn't yet reached a critical stage. Typically the memory array recovers itself from this situation.

Recommended Action: If you see this fault, take the following actions:

1. If the SEL is enabled, look at the SEL statistics on the DIMM to determine which threshold was crossed.
2. Monitor the memory array for further degradation.
3. If the fault occurs on a blade server memory array, remove the blade and re-insert into the chassis.
4. In Cisco FPR Manager, decommission and recommission the server.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltLsServerFailed

Fault Code: F0657

Message: Service profile [name] failed

Explanation: Server has failed. This fault typically occurs if the adapter power on self-test results in major and critical errors.

Recommended Action: If you see this fault, take the following actions:

1. Check the POST results for the server. In Cisco FPR Manager GUI, you can access the POST results from the General tab for the server. In Cisco FPR Manager CLI, you can access the POST results through the **show post** command under the scope for the server.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsServerDiscoveryFailed

Fault Code: F0658

Message: Service profile [name] discovery failed

Explanation: The shallow discovery that occurs when the server associated with service profile fails. If the server is up and the data path is working, this fault typically occurs as a result of one of the following issues:

- Cisco FPR Manager cannot communicate with the CIMC on the server.
- The server cannot communicate with the fabric interconnect.

Recommended Action: If you see this fault, take the following actions:

1. Check the FSM tab and view the current state of the server and any FSM operations.
2. Check the error descriptions and see if any server components indicate a failure.
3. If the server or a server component has failed, do the following:
   a. Check the operational state of the server.
   b. If the server is not operable, reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsServerConfigFailure

Fault Code: F0659

Message: Service profile [name] configuration failed due to [configQualifier]

Explanation: The named configuration qualifier is not available. This fault typically occurs because Cisco FPR Manager cannot successfully deploy the service profile due to a lack of resources that meet the named qualifier. For example, this fault can occur if the following occurs:

- The service profile is configured for a server adapter with vHBAs, and the adapter on the server does not support vHBAs.
- The service profile is created from a template which includes a server pool, and the server pool is empty.
- The local disk configuration policy in the service profile specifies the No Local Storage mode, but the server contains local disks.

Recommended Action: If you see this fault, take the following actions:

1. Check the status of the server pool associated with the service profile. If the pool is empty, add more blade servers to it.
2. Check the state of the server and ensure that it is in either the discovered or unassociated state.
3. If the server is associated or undiscovered, do one of the following:
   - Discover the server.
   - Disassociate the server from the current service profile.
   - Select another server to associate with the service profile.
4. Review each policy in the service profile and verify that the selected server meets the requirements in the policy.
5. If the server does not meet the requirements of the service profile, do one of the following:
   - Modify the service profile to match the server.
   - Select another server that does meet the requirements to associate with the service profile.
6. If you can verify that the server meets the requirements of the service profile, create a **show tech-support** file and contact Cisco TAC.

Fault Details

Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsServerRemoved

Fault Code: F0661

Message: Service profile [name] underlying resource removed

Explanation: Cisco FPR Manager cannot access the server associated with the service profile. This fault typically occurs as a result of one of the following issues:

- The server has been physically removed from the slot.
- The server is not available.

Recommended Action: If you see this fault, take the following actions:

1. If the server was removed from the slot, reinsert the server in the slot.
2. If the server was not removed, remove and reinsert the server.**NOTE:** If the server is operable, this action can be disruptive to current operations.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-removed
mibFaultCode: F0661
mibFaultName: fltLsServerRemoved
moClass: ls:Server
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsServerInaccessible

Fault Code: F0662

Message: Service profile [name] cannot be accessed

Explanation: Cisco FPR Manager cannot communicate with the CIMC on the server. This fault typically occurs as a result of one of the following issues:

- The server port or ports have failed.
- The I/O module is offline.
- The BMC has failed.

Recommended Action: If you see this fault, take the following actions:

1. If Cisco FPR Manager shows that the CIMC is down, physically reseat the server.
2. If Cisco FPR Manager shows that the server ports have failed, attempt to enable them.
3. If the I/O module is offline, check for faults on that component.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: server-inaccessible
mibFaultCode: F0662
mibFaultName: fltLsServerInaccessible
moClass: ls:Server
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsServerAssociationFailed

Fault Code: F0663

Message: Service profile [name] association failed for [pnDn]

Explanation: The service profile could not be associated with the server. This fault typically occurs because Cisco FPR Manager cannot communicate with one or more of the following:

- Fabric interconnect
- CIMC on the server
- SAS controller driver
- Server

Recommended Action: If you see this fault, take the following actions:

1. Check the FSM tab for the server and service profile to determine why the association failed.
2. If the server is stuck in an inappropriate state, such as booting, power cycle the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: association-failed
mibFaultCode: F0663
mibFaultName: fltLsServerAssociationFailed
moClass: ls:Server
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsComputeBindingAssignmentRequirementsNotMet

Fault Code: F0664

Message: Assignment of service profile [name] to server [pnDn] failed

Explanation: The server could not be assigned to the selected service profile. This fault typically occurs as a result of one of the following issues:

- The selected server does not meet the requirements of the service profile.
- If the service profile was configured for restricted migration, the selected server does not match the currently or previously assigned server.

Recommended Action: If you see this fault, select a different server that meets the requirements of the service profile or matches the currently or previously assigned server.

Fault Details

```
Severity: minor
Cause: assignment-failed
mibFaultCode: F0664
mibFaultName: fltLsComputeBindingAssignmentRequirementsNotMet
moClass: ls:ComputeBinding
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]/pn
Affected MO: org-[name]/ls-[name]/pn-req
Affected MO: org-[name]/tier-[name]/ls-[name]/pn
Affected MO: org-[name]/tier-[name]/ls-[name]/pn-req
```

fltLsServerUnassociated

Fault Code: F0665

Message: Service profile [name] is not associated

Explanation: The service profile has not yet been associated with a server or a server pool. This fault typically occurs as a result of one of the following issues:

- There is no acceptable server in the server pool.
- The association failed.

Recommended Action: If you see this fault, take the following actions:

1. If you did not intend to associate the service profile, ignore the fault.
2. If you did intend to associate the service profile, check the association failure fault.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: unassociated
mibFaultCode: F0665
mibFaultName: fltLsServerUnassociated
moClass: ls:Server
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsServerSvnicNotPresent

Fault Code: F0666

Message: Service profile [name] does not contain service vnics for netflow.

Explanation: The service profile does not have service vnics, hence netflow will not function on this server. This fault typically occurs as a result of one of the following issues:

- Service profile has maximum number of vnics already created, hence cannot accomodate service vnics required for netflow.

Recommended Action: If you see this fault, take the following actions:

1. If you have already enabled netflow, please reduce the number of vnics on the SP to accomodate service vnics.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: svnic-not-present
mibFaultCode: F0666
mibFaultName: fltLsServerSvnicNotPresent
moClass: ls:Server
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsServerServer-unfulfilled

Fault Code: F0667

Message: Server [pnDn] does not fulfill Service profile [name] due to [configQualifier]

Explanation: The server no longer meets the qualification requirements of the service profile. This fault typically occurs as a result of one of the following issues:

- The server has been physically changed.
- A required component of the server has failed.

Recommended Action: If you see this fault, take the following actions:

1. Check the server inventory compare to the service profile qualifications.
2. If the server inventory does not match the service profile qualifications, do one of the following:
   - Associate the server with a different service profile.
   - Ensure the server has sufficient resources to qualify for the current service profile.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: server-failed
mibFaultCode: F0667
mibFaultName: fltLsServerServerUnfulfilled

Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsmaintMaintPolicyUnresolvableScheduler

Fault Code: F0668

Message: Schedule [schedName] referenced by maintenance policy [name] does not exist

Explanation: The schedule that is referenced by the maintenance policy does not exist. This fault typically occurs as a result of one of the following issues:

- The schedule does not exist.
- The schedule was deleted.

Recommended Action: If you see this fault, take the following actions:

1. Check if the named schedule exists. If it is deleted or missing, try to create it.
2. If the named schedule is deleted or missing, recreate it.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: non-existent-scheduler
mibFaultCode: F0668
mibFaultName: fltLsmaintMaintPolicyUnresolvableScheduler
moClass: lsmaint:MaintPolicy

Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]/config-issue
Affected MO: org-[name]/tier-[name]/ls-[name]/config-issue
```

fltIqnpoolPoolEmpty

Fault Code: F0675

Message: iqn pool [name] is empty

Explanation: This fault typically occurs when an IQN pool does not contain any IQNs.

Recommended Action: If you see this fault, take the following actions:

1. If the pool is in use, add a block of IQNs to the pool.
2. If the pool is not in use, ignore the fault.

Fault Details

```
Severity: minor
Cause: empty-pool
mibFaultCode: F0675
mibFaultName: fltIqnpoolPoolEmpty
moClass: iqnpool:Pool
Type: server
autoCleared: true
Affected MO: org-[name]/iqn-pool-[name]
```

fltEtherSwitchIntFIoSatellite-connection-absent

Fault Code: F0687

Message: No link between IOM port [chassisId]/[slotId]/[portId] and fabric interconnect [switchId]:[peerSlotId]/[peerPortId]

Explanation: This fault is raised when an I/O module fabric port, which links the I/O module port and the fabric interconnect, is not functional

Recommended Action: If you see this fault, take the following actions:

1. Verify the fabric interconnect-chassis topology. Make sure each I/O module is connected to only one fabric interconnect.
2. Ensure that the fabric interconnect server port is configured and enabled.
3. Ensure that the links are plugged in properly and reacknowledge the chassis.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: satellite-connection-absent
mibFaultCode: F0687
mibFaultName: fltEtherSwitchIntFIoSatelliteConnectionAbsent
moClass: ether:SwitchIntFIo
Type: connectivity
autoCleared: true
Affected MO: sys/chassis-[id]/slot-[id]/[type]/port-[portId]
Affected MO: sys/chassis-[id]/sw-slot-[id]/[type]/port-[portId]

Affected MO: sys/switch-[id]/slot-[id]/[type]/port-[portId]
```

fltEtherSwitchIntFIoSatellite-wiring-problem

Fault Code: F0688

Message: Invalid connection between IOM port [chassisId]/[slotId]/[portId] and fabric interconnect [switchId]:[peerSlotId]/[peerPortId]

Explanation: This fault typically occurs as a result of a satellite wiring problem on the network-facing interface of an I/O module and Cisco FPR Manager detects that at least one IOM uplink is misconnected to one of the fabric interconnect ports.

Recommended Action: If you see this fault, take the following actions:

1. Verify the fabric interconnect-chassis topology. Make sure each I/O module is connected to only one fabric interconnect.
2. Ensure that the links are plugged in properly and re-acknowledge the chassis.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: info
Cause: satellite-mis-connected
mibFaultCode: F0688

Affected MO: sys/switch-[id]/slot-[id]/[type]/port-[portId]
```

fltEtherSwitchIntFIoSatellite-wiring-numbers-unexpected

Fault Code: F0689

Message: Chassis discovery policy conflict: Link IOM [chassisId]/[slotId]/[portId] to fabric interconnect [switchId]:[peerSlotId]/[peerPortId] not configured

Explanation: The configuration of the chassis discovery policy conflicts with the physical IOM uplinks. Cisco FPR Manager raises this fault when the chassis discovery policy is configured for more links than are physically cabled between the IOM uplinks on the chassis and the fabric interconnect.

Recommended Action: If you see this fault, take the following actions:

1. Ensure that you cable at least the same number of IOM uplinks as are configured in the chassis discovery policy, and that you configure the corresponding server ports on the fabric interconnect.
2. Reacknowledge the chassis.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltEquipmentPsuPowerSupplyProblem

Fault Code: F0690

Message: Power supply [id] in chassis [id] power: [power]Power supply [id] in fabric interconnect [id] power: [power]Power supply [id] in fex [id] power: [power]Power supply [id] in server [id] power: [power]

Explanation: This fault typically occurs when Cisco FPR Manager detects a problem with a power supply unit in a chassis, fabric interconnect or a FEX. For example, the PSU is not functional.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the power cord is properly connected to the PSU and the power source.
2. Verify that the power source is 220 volts.
3. Verify that the PSU is properly installed in the chassis or fabric interconnect.
4. Remove the PSU and reinstall it.
5. Replace the PSU.
6. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

Affected MO: sys/switch-[id]/psu-[id]
```

fltEquipmentPsuOffline

Fault Code: F0691

Message: Power supply [id] in chassis [id] power: [power]Power supply [id] in fabric interconnect [id] power: [power]Power supply [id] in fex [id] power: [power]Power supply [id] in server [id] power: [power]

Explanation: This fault typically occurs when Cisco FPR Manager detects that a power supply unit in a chassis, fabric interconnect, or FEX is offline.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the power cord is properly connected to the PSU and the power source.
2. Verify that the power source is 220 volts.
3. Verify that the PSU is properly installed in the chassis or fabric interconnect.
4. Remove the PSU and reinstall it.

5. Replace the PSU.
6. If the above actions did not resolve the issue, note down the type of PSU, execute the **show tech-support** command, and contact Cisco Technical Support.

Fault Details

```

fltEquipmentPsuPowerSupplyShutdown

Fault Code: F0692

Message: Power supply [id] in chassis [id] shutdown reason:[powerStateQualifier]

Explanation: This fault typically occurs when a power supply unit in a chassis, fabric interconnect, or a FEX is shut down, either due to higher than expected power current, higher than expected temperatures, or the failure of a fan.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the server.
2. Review the Cisco FPR Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco FPR chassis or rack server are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Verify that the power cord is properly connected to the PSU and the power source.
7. Verify that the power source is 220 volts.
8. Verify that the PSU is properly installed in the chassis or fabric interconnect.
9. Remove the PSU and reinstall it.
10. Replace the PSU.
11. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Affected MO: sys/switch-[id]/psu-[id]
```

fltEquipmentChassisIdentity-unestablishable

Fault Code: F0693

Message: Chassis [id] has an invalid FRU

Explanation: This fault typically occurs because Cisco FPR Manager has detected an unsupported chassis. For example, the model, vendor, or revision is not recognized.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco FPR Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, execute the **show tech-support** command and contact Cisco technical support.

Fault Details

```
Severity: major
Cause: identity-unestablishable
mibFaultCode: F0693
mibFaultName: fltEquipmentChassisIdentityUnestablishable
moClass: equipment:Chassis
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentFexIdentity-unestablishable

Fault Code: F0694

Message: Fex [id] has an invalid FRU

Explanation: This fault typically occurs because Cisco FPR Manager detected an unsupported chassis. For example, the model, vendor, or revision is not recognized.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco FPR Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: identity-unestablishable
mibFaultCode: F0694
mibFaultName: fltEquipmentFexIdentityUnestablishable
moClass: equipment:Fex
Type: equipment
autoCleared: true
Affected MO: sys/fex-[id]
```

fltEquipmentFexFex-unsupported

Fault Code: F0695

Message: Fex [id] with model [model] is unsupported

Explanation: This fault typically occurs because Cisco FPR Manager has detected an unsupported FEX. For example, the model, vendor, or revision is not recognized.

Recommended Action: If you see this fault, take the following actions:

1. Verify that a supported FEX is installed.
2. Verify that the capability catalog in Cisco FPR Manager is up to date. If necessary, update the catalog.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: fex-unsupported
mibFaultCode: F0695
mibFaultName: fltEquipmentFexFexUnsupported
moClass: equipment:Fex
Type: equipment
autoCleared: true
Affected MO: sys/fex-[id]
```

fltEquipmentFanModuleDegraded

Fault Code: F0696

Message: Fan module [tray]-[id] in chassis [id] operability: [operability]Fan module [tray]-[id] in server [id] operability: [operability]Fan module [tray]-[id] in fabric interconnect [id] operability: [operability]

Explanation: This fault occurs when a fan module is not operational.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the fan module.
2. Review the Cisco FPR Site Preparation Guide to ensure the fan module has adequate airflow, including front and back clearance.
3. Verify that the air flows for the fan module are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco FPR power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: equipment-degraded
mibFaultCode: F0696
mibFaultName: fltEquipmentFanModuleDegraded
moClass: equipment:FanModule

```

fltEquipmentFanDegraded

Fault Code: F0697

Message: Fan [id] in Fan Module [tray]-[id] under chassis [id] operability: [operability]Fan [id] in fabric interconnect [id] operability: [operability]Fan [id] in fex [id] operability: [operability]Fan [id] in Fan Module [tray]-[id] under server [id] operability: [operability]

Explanation: This fault occurs when one or more fans in a fan module are not operational, but at least one fan is operational.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the fan module.
2. Review the Cisco FPR Site Preparation Guide and ensure the fan module has adequate airflow, including front and back clearance.
3. Verify that the air flows are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Replace the faulty fan modules.
8. Use the Cisco FPR power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
9. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltEquipmentChassisInoperable

Fault Code: F0698

Message: Chassis [id] operability: [operability]

Explanation: This fault typically occurs for one of the following reasons:

- The fabric interconnect cannot communicate with a chassis. For a cluster configuration, this fault means that neither fabric interconnect can communicate with the chassis.
- The chassis has an invalid FRU.

Recommended Action: If you see this fault, take the following actions:

1. In Cisco FPR Manager, reacknowledge the chassis that raised the fault.
2. Physically unplug and replug the power cord into the chassis.
3. Verify that the I/O modules are functional.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical

Affected MO: sys/switch-[id]/psu-[id]
```

fltEquipmentIOCardRemoved

Fault Code: F0703

Message: [side] IOM [chassisId]/[id] ([switchId]) is removed

Explanation: This fault typically occurs because an I/O module is removed from the chassis. In a cluster configuration, the chassis fails over to the other I/O module. For a standalone configuration, the chassis associated with the I/O module loses network connectivity. This is a critical fault because it can result in the loss of network connectivity and disrupt data traffic through the I/O module.

Recommended Action: If you see this fault, take the following actions:

1. Reinsert the I/O module and configure the fabric-interconnect ports connected to it as server ports and wait a few minutes to see if the fault clears.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: equipment-removed
mibFaultCode: F0703
mibFaultName: fltEquipmentIOCardRemoved

fltEquipmentIOCardInaccessible

Fault Code: F0704

Message: [side] IOM [chassisId]/[id] ([switchId]) is inaccessible

Explanation: This fault typically occurs because an I/O module has lost its connection to the fabric interconnects. In a cluster configuration, the chassis fails over to the other I/O module. For a standalone configuration, the chassis associated with the I/O module loses network connectivity. This is a critical fault because it can result in the loss of network connectivity and disrupt data traffic through the I/O module.

Recommended Action: If you see this fault, take the following actions:

1. Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: equipment-inaccessible
mibFaultCode: F0704
mibFaultName: fltEquipmentIOCardInaccessible
moClass: equipment:IOCard
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/slot-[id]
Affected MO: sys/fex-[id]/slot-[id]
```

fltEquipmentIOCardPost-failure

Fault Code: F0705

Message: [side] IOM [chassisId]/[id] ([switchId]) POST failure

Explanation: This fault typically occurs when an I/O module encounters errors during the Power On Self Test (POST). The impact of this fault varies according to the errors that were encountered during POST.

Recommended Action: If you see this fault, take the following actions:

1. Check the POST results for the I/O module. In Cisco FPR Manager GUI, you can access the POST results from the General tab for the I/O module. In Cisco FPR Manager CLI, you can access the POST results through the show post command under the scope for the I/O module.
2. If the POST results indicate FRU error, check if FPR manager has raised fault for the FRU and follow recommended action for the fault.
3. Otherwise, reboot the I/O module.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-problem
mibFaultCode: F0705
mibFaultName: fltEquipmentIOCardPostFailure
moClass: equipment:IOCard
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/slot-[id]
Affected MO: sys/fex-[id]/slot-[id]
```

fltEquipmentFexPost-failure

Fault Code: F0706

Message: fex [id] POST failure

Explanation: This fault typically occurs when a FEX encounters errors during the Power On Self Test (POST). The impact of this fault varies depending on which errors were encountered during POST.

Recommended Action: If you see this fault, take the following actions:

1. Check the POST results for the FEX. In the Cisco FPR Manager GUI, you can access the POST results from the General tab for the FEX. In the Cisco FPR Manager CLI, you can access the POST results by entering the **show post** command under the scope for the FEX.
2. Reboot the FEX.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-problem
mibFaultCode: F0706
mibFaultName: fltEquipmentFexPostFailure

```

fltEquipmentFanModuleMissing

Fault Code: F0707

Message: Fan module [tray]-[id] in chassis [id] presence: [presence]Fan module [tray]-[id] in server [id] presence: [presence]Fan module [tray]-[id] in fabric interconnect [id] presence: [presence]

Explanation: This fault occurs if a fan Module slot is not equipped or removed from its slot

Recommended Action: If you see this fault, take the following actions:

1. If the reported slot is empty, insert a fan module into the slot.
2. If the reported slot contains a fan module, remove and reinsert the fan module.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical

```

fltEquipmentFanMissing

Fault Code: F0708

Message: Fan [id] in fabric interconnect [id] presence: [presence]Fan [id] in fex [id] presence: [presence]Fan [id] in Fan Module [tray]-[id] under server [id] presence: [presence]

Explanation: This fault occurs in the unlikely event that a fan in a fan module cannot be detected.

Recommended Action: If you see this fault, take the following actions:

1. Insert/reinsert the fan module in the slot that is reporting the issue.
2. Replace the fan module with a different fan module, if available.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltEquipmentPsuMissing

Fault Code: F0709

Message: Power supply [id] in chassis [id] presence: [presence]Power supply [id] in fabric interconnect [id] presence: [presence]Power supply [id] in fex [id] presence: [presence]Power supply [id] in server [id] presence: [presence]

Explanation: This fault typically occurs when Cisco FPR Manager detects a problem with a power supply unit in a chassis, fabric interconnect, or a FEX. For example, the PSU is missing.

Recommended Action: If you see this fault, take the following actions:

1. If the PSU is physically present in the slot, remove and then reinsert it.
2. If the PSU is not physically present in the slot, insert a new PSU.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltEquipmentIOCardThermalProblem

Fault Code: F0710

Message: [side] IOM [chassisId]/[id] ([switchId]) operState: [operState]

Explanation: This fault occurs when there is a thermal problem on an I/O module. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco FPR equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco FPR equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the I/O module.
2. Review the Cisco FPR Site Preparation Guide to ensure the I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco FPR chassis are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Replace faulty I/O modules.
8. Use the Cisco FPR power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
9. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltEquipmentIOCardThermalThresholdNonCritical

Fault Code: F0711

Message: [side] IOM [chassisId]/[id] ([switchId]) temperature: [thermal]

Explanation: This fault occurs when the temperature of an I/O module has exceeded a non-critical threshold value, but is still below the critical threshold. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco FPR equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco FPR equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the I/O module.
2. Review the Cisco FPR Site Preparation Guide to ensure the chassis and I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco FPR chassis and I/O module are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco FPR power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Explanation: This fault occurs when the PSU voltage has exceeded the specified hardware voltage rating.

Recommended Action: If you see this fault, take the following actions:

1. Remove and reseat the PSU.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: voltage-problem
mibFaultCode: F0721
mibFaultName: fltEquipmentPsuVoltageThresholdCritical
moClass: equipment:Psu
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/psu-[id]
Affected MO: sys/fex-[id]/psu-[id]
Affected MO: sys/rack-unit-[id]/psu-[id]
Affected MO: sys/switch-[id]/psu-[id]
```

fltEquipmentPsuVoltageThresholdNonRecoverable

Fault Code: F0722

Message: Power supply [id] in chassis [id] voltage: [voltage]Power supply [id] in fabric interconnect [id] voltage: [voltage]Power supply [id] in fex [id] voltage: [voltage]Power supply [id] in server [id] voltage: [voltage]

Explanation: This fault occurs when the PSU voltage has exceeded the specified hardware voltage rating and PSU hardware may have been damaged as a result or may be at risk of being damaged.

Recommended Action: If you see this fault, take the following actions:

1. Remove and reseat the PSU.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: voltage-problem
mibFaultCode: F0722
mibFaultName: fltEquipmentPsuVoltageThresholdNonRecoverable
moClass: equipment:Psu
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/psu-[id]
Affected MO: sys/fex-[id]/psu-[id]
Affected MO: sys/rack-unit-[id]/psu-[id]
Affected MO: sys/switch-[id]/psu-[id]
```

fltEquipmentPsuPerfThresholdNonCritical

Fault Code: F0723

Message: Power supply [id] in chassis [id] output power: [perf]Power supply [id] in fabric interconnect [id] output power: [perf]Power supply [id] in server [id] output power: [perf]

Explanation: This fault is raised as a warning if the current output of the PSU in a chassis, fabric interconnect, or rack server does not match the desired output value.

Recommended Action: If you see this fault, take the following actions:

1. Monitor the PSU status.
2. If possible, remove and reseat the PSU.
3. If the above action did not resolve the issue, create a **show tech-support** file for the chassis and Cisco FPR Manager, and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: performance-problem

```

fltEquipmentPsuPerfThresholdCritical

Fault Code: F0724

Message: Power supply [id] in chassis [id] output power: [perf]Power supply [id] in fabric interconnect [id] output power: [perf]Power supply [id] in server [id] output power: [perf]

Explanation: This fault occurs if the current output of the PSU in a chassis, fabric interconnect, or rack server is far below or above the desired output value.

Recommended Action: If you see this fault, take the following actions:

1. Monitor the PSU status.
2. Plan to replace the PSU as soon as possible.
3. If the above actions did not resolve the issue, create a **show tech-support** file for the chassis and Cisco FPR Manager, and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: performance-problem
mibFaultCode: F0724
mibFaultName: fltEquipmentPsuPerfThresholdCritical
moClass: equipment:Psu
Type: equipment
```

```
autoCleared: true

Affected MO: sys/fex-[id]/psu-[id]
Affected MO: sys/rack-unit-[id]/psu-[id]
Affected MO: sys/switch-[id]/psu-[id]
```

fltEquipmentPsuPerfThresholdNonRecoverable

Fault Code: F0725

Message: Power supply [id] in chassis [id] output power: [perf]Power supply [id] in fabric interconnect [id] output power: [perf]Power supply [id] in server [id] output power: [perf]

Explanation: This fault occurs if the current output of the PSU in a chassis, fabric interconnect, or rack server is far above or below the non-recoverable threshold value.

Recommended Action: If you see this fault, plan to replace the PSU as soon as possible.

Fault Details

```
Severity: critical
Cause: performance-problem
mibFaultCode: F0725
mibFaultName: fltEquipmentPsuPerfThresholdNonRecoverable
moClass: equipment:Psu
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/psu-[id]
Affected MO: sys/fex-[id]/psu-[id]
Affected MO: sys/rack-unit-[id]/psu-[id]
Affected MO: sys/switch-[id]/psu-[id]
```

fltEquipmentFanPerfThresholdNonCritical

Fault Code: F0726

Message: Fan [id] in Fan Module [tray]-[id] under chassis [id] speed: [perf]Fan [id] in fabric interconnect [id] speed: [perf]Fan [id] in Fan Module [tray]-[id] under server [id] speed: [perf]

Explanation: This fault occurs when the fan speed reading from the fan controller does not match the desired fan speed and is outside of the normal operating range. This can indicate a problem with a fan or with the reading from the fan controller.

Recommended Action: If you see this fault, take the following actions:

1. Monitor the fan status.
2. If the problem persists for a long period of time or if other fans do not show the same problem, reseat the fan.
3. Replace the fan module.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: info
Cause: performance-problem
mibFaultCode: F0726
mibFaultName: fltEquipmentFanPerfThresholdNonCritical
```

```
moClass: equipment:Fan
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/fan-[id]
Affected MO: sys/chassis-[id]/fan-module-[tray]-[id]/fan-[id]

Affected MO: sys/rack-unit-[id]/fan-module-[tray]-[id]/fan-[id]
Affected MO: sys/switch-[id]/fan-[id]
Affected MO: sys/switch-[id]/fan-module-[tray]-[id]/fan-[id]
```

fltEquipmentFanPerfThresholdCritical

Fault Code: F0727

Message: Fan [id] in Fan Module [tray]-[id] under chassis [id] speed: [perf]Fan [id] in fabric interconnect [id] speed: [perf]Fan [id] in Fan Module [tray]-[id] under server [id] speed: [perf]

Explanation: This fault occurs when the fan speed read from the fan controller does not match the desired fan speed and has exceeded the critical threshold and is in risk of failure. This can indicate a problem with a fan or with the reading from the fan controller.

Recommended Action: If you see this fault, take the following actions:

1. Monitor the fan status.
2. If the problem persists for a long period of time or if other fans do not show the same problem, reseat the fan.
3. If the above actions did not resolve the issue, create a **show tech-support** file for the chassis and contact Cisco TAC.

Fault Details

```
Severity: info
Cause: performance-problem
mibFaultCode: F0727
mibFaultName: fltEquipmentFanPerfThresholdCritical
moClass: equipment:Fan
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/fan-[id]

Affected MO: sys/switch-[id]/fan-module-[tray]-[id]/fan-[id]
```

fltEquipmentFanPerfThresholdNonRecoverable

Fault Code: F0728

Message: Fan [id] in Fan Module [tray]-[id] under chassis [id] speed: [perf]Fan [id] in fabric interconnect [id] speed: [perf]Fan [id] in Fan Module [tray]-[id] under server [id] speed: [perf]

Explanation: This fault occurs when the fan speed read from the fan controller has far exceeded the desired fan speed. It frequently indicates that the fan has failed.

Recommended Action: If you see this fault, take the following actions:

1. Replace the fan.

2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: info
Cause: performance-problem
mibFaultCode: F0728

Affected MO: sys/switch-[id]/fan-[id]
Affected MO: sys/switch-[id]/fan-module-[tray]-[id]/fan-[id]
```

fltEquipmentIOCardFirmwareUpgrade

Fault Code: F0730

Message: Chassis controller in IOM [chassisId]/[id] ([switchId]) firmware upgrade problem: [upgradeStatus]

Explanation: This fault typically occurs when an IOM upgrade fails.

Recommended Action: If you see this fault, take the following actions:

1. On the FSM tab for the IOM, verify whether FSM for the upgrade completed successfully or failed.
2. If the FSM failed, review the error message in the FSM.

3. If the error message is self explanatory, verify the physical connectivity. For example, an error message could be No Connection to Endpoint or Link Down.
4. If the above action did not resolve the issue and the fault persists, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: firmware-upgrade-problem
mibFaultCode: F0730
mibFaultName: fltEquipmentIOCardFirmwareUpgrade
moClass: equipment:IOCard
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/slot-[id]
Affected MO: sys/fex-[id]/slot-[id]
```

fltEquipmentChassisUnsupportedConnectivity

Fault Code: F0731

Message: Current connectivity for chassis [id] does not match discovery policy: [configState]

Explanation: This fault typically occurs when the current connectivity for a chassis does not match the configuration in the chassis discovery policy.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the correct number of links are configured in the chassis discovery policy.
2. Check the state of the I/O module links.
3. Reacknowledge the chassis.
4. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: unsupported-connectivity-configuration
mibFaultCode: F0731
mibFaultName: fltEquipmentChassisUnsupportedConnectivity
moClass: equipment:Chassis
Type: connectivity
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentChassisUnacknowledged

Fault Code: F0732

Message: Chassis [id] connectivity configuration: [configState]

Explanation: This fault typically occurs when or more of the I/O module links from the chassis are unacknowledged.

Recommended Action: If you see this fault, take the following actions:

1. Check the state of the I/O module links.

2. Reacknowledge the chassis.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: equipment-unacknowledged
mibFaultCode: F0732
mibFaultName: fltEquipmentChassisUnacknowledged
moClass: equipment:Chassis
Type: connectivity
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentIOCardUnsupportedConnectivity

Fault Code: F0733

Message: IOM [chassisId]/[id] ([switchId]) current connectivity does not match discovery policy or connectivity is unsupported: [configState]

Explanation: This fault typically occurs when the current connectivity for an I/O module does not match the configuration in the chassis discovery policy.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the correct number of links are configured in the chassis discovery policy.
2. Check the state of the I/O module links.
3. Note that atleast 2 links are required to be connected between FEX and 61xx Fabric Interconnect
4. Reacknowledge the chassis.
5. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: unsupported-connectivity-configuration
mibFaultCode: F0733
mibFaultName: fltEquipmentIOCardUnsupportedConnectivity
moClass: equipment:IOCard
Type: connectivity
autoCleared: true
Affected MO: sys/chassis-[id]/slot-[id]
Affected MO: sys/fex-[id]/slot-[id]
```

fltEquipmentIOCardAutoUpgradingFirmware

Fault Code: F0734

Message: IOM [chassisId]/[id] ([switchId]) is auto upgrading firmware

Explanation: This fault typically occurs when an I/O module is auto upgrading. Auto-upgrade occurs when the firmware version on the IOM is incompatible with the firmware version on the fabric interconnect.

Recommended Action: If you see this fault, take the following actions:

1. If the IOM and fabric interconnects are not running the same firmware version, wait for the auto-upgrade to complete.
2. When the IOM upgrade is completed, verify that Cisco FPR Manager has cleared this fault.
3. If you see this fault after the IOM overall status changes to operable, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: auto-firmware-upgrade
mibFaultCode: F0734
mibFaultName: fltEquipmentIOCardAutoUpgradingFirmware
moClass: equipment:IOCard
Type: connectivity
autoCleared: true
Affected MO: sys/chassis-[id]/slot-[id]
Affected MO: sys/fex-[id]/slot-[id]
```

fltEquipmentIOCardUnacknowledged

Fault Code: F0735

Message: IOM [chassisId]/[id] ([switchId]) connectivity configuration: [configState]

Explanation: This fault typically occurs when an I/O module is unacknowledged.

Recommended Action: If you see this fault, take the following actions:

1. Check the state of the I/O module links.
2. Reacknowledge the chassis.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: equipment-unacknowledged
mibFaultCode: F0735
mibFaultName: fltEquipmentIOCardUnacknowledged
moClass: equipment:IOCard
Type: connectivity
autoCleared: true
Affected MO: sys/chassis-[id]/slot-[id]
Affected MO: sys/fex-[id]/slot-[id]
```

fltEquipmentIOCardPeerDisconnected

Fault Code: F0736

Message: IOM [chassisId]/[id] ([switchId]) peer connectivity: [peerCommStatus]

Explanation: This fault typically occurs when an I/O module is unable to communicate with its peer I/O module.

Recommended Action: If you see this fault, take the following actions:

1. Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.
2. If the fault does not clear after a few minutes, remove and reinsert the I/O module.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: equipment-disconnected
mibFaultCode: F0736
mibFaultName: fltEquipmentIOCardPeerDisconnected
moClass: equipment:IOCard
Type: connectivity
autoCleared: true
Affected MO: sys/chassis-[id]/slot-[id]
Affected MO: sys/fex-[id]/slot-[id]
```

fltEquipmentChassisIdentity

Fault Code: F0737

Message: Chassis [id] has a mismatch between FRU identity reported by Fabric/IOM vs. FRU identity reported by CMC

Explanation: This fault typically occurs when the FRU information for an I/O module is corrupted or malformed.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco FPR Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: fru-problem
mibFaultCode: F0737
mibFaultName: fltEquipmentChassisIdentity
moClass: equipment:Chassis
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentChassisInvalid-fru

Fault Code: F0738

Message: Chassis [id] has a empty value for FRU identity reported by CMC.

Explanation: This fault typically occurs when the FRU information for a chassis has empty value.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco FPR Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: fru-problem
mibFaultCode: F0738
mibFaultName: fltEquipmentChassisInvalidFru
moClass: equipment:Chassis
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentChassisPowerProblem

Fault Code: F0739

Message: Power state on chassis [id] is [power]

Explanation: This fault typically occurs when the chassis fails to meet the minimal power requirements defined in the power policy or when one or more power supplies have failed.

Recommended Action: If you see this fault, take the following actions:

1. In Cisco FPR Manager, verify that all PSUs for the chassis are functional.
2. Verify that all PSUs are seated properly within the chassis and are powered on.
3. Physically unplug and replug the power cord into the chassis.
4. If all PSUs are operating at maximum capacity, either add more PSUs to the chassis or redefine the power policy in Cisco FPR Manager.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: power-problem
mibFaultCode: F0739
mibFaultName: fltEquipmentChassisPowerProblem
moClass: equipment:Chassis
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentChassisThermalThresholdCritical

Fault Code: F0740

Message: Chassis thermal state is [thermal]. [faultMsg]

Explanation: This fault occurs under the following conditions:

1. If a component within a chassis is operating outside the safe thermal operating range.
2. If the chassis controller in the IOM is unable to determine the thermal condition of a blade server, the **show tech-support** file for the chassis provides a more detailed report of the most severe thermal conditions currently applicable for that chassis.

Recommended Action: If you see this fault, take the following actions:

1. Check the temperature readings for the blade servers and IOM and ensure they are within the recommended thermal safe operating range.
2. If the fault reports a "Thermal Sensor threshold crossing in blade" error for one or more blade servers, check if DIMM or processor temperature related faults have been raised against that blade.
3. If the fault reports a "Thermal Sensor threshold crossing in IOM" error for one or both the IOMs, check if thermal faults have been raised against that IOM. Those faults include details of the thermal condition.
4. If the fault reports a "Missing or Faulty Fan" error, check on the status of that fan. If it needs replacement, create a **show tech-support** file for the chassis and contact Cisco TAC.
5. If the fault reports a "No connectivity between IOM and blade" or "Thermal Sensor readings unavailable from blade" error, check if that blade server is operational and whether any faults have been raised against that blade server. In this situation, the chassis controller may go into a fail-safe operating mode and the fan speeds may increase as a precautionary measure.
6. If the above actions did not resolve the issue and the condition persists, create a **show tech-support** file for Cisco FPR Manager and the chassis and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: thermal-problem
mibFaultCode: F0740
mibFaultName: fltEquipmentChassisThermalThresholdCritical
moClass: equipment:Chassis
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentChassisThermalThresholdNonCritical

Fault Code: F0741

Message: Thermal condition on chassis [id]. [thermalStateQualifier]

Explanation: FPRM raises this fault under the following conditions:

1. If a component within a chassis is operating outside the safe thermal operating range.
2. If the chassis controller in the IOM is unable to determine the thermal condition of a blade server, the **show tech-support** file for the chassis provides a more detailed report of the most severe thermal conditions currently applicable for that chassis.

Recommended Action: If you see this fault, take the following actions:

1. Check the temperature readings for the blade servers and IOM and ensure they are within the recommended thermal safe operating range.
2. If the fault reports a "Thermal Sensor threshold crossing in blade" error for one or more blade servers, check if DIMM or processor temperature related faults have been raised against that blade.
3. If the fault reports a "Thermal Sensor threshold crossing in IOM" error for one or both the IOMs, check if thermal faults have been raised against that IOM. Those faults include details of the thermal condition.
4. If the fault reports a "Missing or Faulty Fan" error, check on the status of that fan. If it needs replacement, create a **show tech-support** file for the chassis and contact Cisco TAC.

5. If the fault reports a "No connectivity between IOM and blade" or "Thermal Sensor readings unavailable from blade" error, check if that blade server is operational and whether any faults have been raised against that blade server. In this situation, the chassis controller may go into a fail-safe operating mode and the fan speeds may increase as a precautionary measure.
6. If the above actions did not resolve the issue and the condition persists, create a **show tech-support** file for Cisco FPR Manager and the chassis and contact Cisco TAC.

```

fltEquipmentChassisThermalThresholdNonRecoverable

Fault Code: F0742

Message: Thermal condition on chassis [id]. [thermalStateQualifier]

Explanation: FPRM raises this fault under the following conditions:

1. If a component within a chassis is operating outside the safe thermal operating range.
2. If the chassis controller in the IOM is unable to determine the thermal condition of a blade server, the **show tech-support** file for the chassis provides a more detailed report of the most severe thermal conditions currently applicable for that chassis.

Recommended Action: If you see this fault, take the following actions:

1. Check the temperature readings for the blade servers and IOM and ensure they are within the recommended thermal safe operating range.
2. If the fault reports a "Thermal Sensor threshold crossing in blade" error for one or more blade servers, check if DIMM or processor temperature related faults have been raised against that blade.
3. If the fault reports a "Thermal Sensor threshold crossing in IOM" error for one or both the IOMs, check if thermal faults have been raised against that IOM. Those faults include details of the thermal condition.
4. If the fault reports a "Missing or Faulty Fan" error, check on the status of that fan. If it needs replacement, create a **show tech-support** file for the chassis and contact Cisco TAC.
5. If the fault reports a "No connectivity between IOM and blade" or "Thermal Sensor readings unavailable from blade" error, check if that blade server is operational and whether any faults have been raised against that blade server. In this situation, the chassis controller may go into a fail-safe operating mode and the fan speeds may increase as a precautionary measure.
6. If the above actions did not resolve the issue and the condition persists, create a **show tech-support** file for Cisco FPR Manager and the chassis and contact Cisco TAC.

fltEquipmentIOCardIdentity

Fault Code: F0743

Message: [side] IOM [chassisId]/[id] ([switchId]) has a malformed FRU

Explanation: This fault typically occurs when the FRU information for an I/O module is corrupted or malformed.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco FPR Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: fru-problem

Affected MO: sys/switch-[id]/fan-module-[tray]-[id]/health-led
Affected MO: sys/switch-[id]/psu-[id]/health-led
```

fltEquipmentSwitchIOCardRemoved

Fault Code: F0754

Message: [side] FI IOM [chassisId]/[id] ([switchId]) is removed

Explanation: This fault typically occurs because an FI I/O module is removed from the chassis. In a cluster configuration, the chassis fails over to the other FI I/O module. For a standalone configuration, the chassis associated with the FI I/O module loses network connectivity. This is a critical fault because it can result in the loss of network connectivity and disrupt data traffic through the FI I/O module.

Recommended Action: If you see this fault, take the following actions:

1. Reinsert the FI I/O module and configure the fabric-interconnect ports connected to it as server ports and wait a few minutes to see if the fault clears.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: equipment-removed
mibFaultCode: F0754
mibFaultName: fltEquipmentSwitchIOCardRemoved
moClass: equipment:SwitchIOCard
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/sw-slot-[id]
```

fltEquipmentSwitchIOCardThermalProblem

Fault Code: F0755

Message: [side] FI IOM [chassisId]/[id] ([switchId]) operState: [operState]

Explanation: This fault occurs when there is a thermal problem on an FI I/O module. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco FPR equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco FPR equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the FI I/O module.
2. Review the Cisco FPR Site Preparation Guide to ensure the FI I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco FPR chassis are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Replace faulty FI I/O modules.
8. Use the Cisco FPR power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
9. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: thermal-problem
mibFaultCode: F0755
mibFaultName: fltEquipmentSwitchIOCardThermalProblem
moClass: equipment:SwitchIOCard
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/sw-slot-[id]
```

fltEquipmentSwitchIOCardThermalThresholdNonCritical

Fault Code: F0756

Message: [side] FI IOM [chassisId]/[id] ([switchId]) temperature: [thermal]

Explanation: This fault occurs when the temperature of an FI I/O module has exceeded a non-critical threshold value, but is still below the critical threshold. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco FPR equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco FPR equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the FI I/O module.

2. Review the Cisco FPR Site Preparation Guide to ensure the chassis and FI I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco FPR chassis and FI I/O module are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco FPR power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

```

fltEquipmentSwitchIOCardThermalThresholdCritical

Fault Code: F0757

Message: [side] FI IOM [chassisId]/[id] ([switchId]) temperature: [thermal]

Explanation: This fault occurs when the temperature of an FI I/O module has exceeded a critical threshold value. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco FPR equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco FPR equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the FI I/O module.
2. Review the Cisco FPR Site Preparation Guide to ensure the chassis and FI I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco FPR chassis and FI I/O module are not obstructed.
4. Verify that the site cooling system is operating properly.

5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Replace the faulty FI I/O modules.
8. Use the Cisco FPR power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
9. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

```

fltEquipmentSwitchIOCardThermalThresholdNonRecoverable

Fault Code: F0758

Message: [side] FI IOM [chassisId]/[id] ([switchId]) temperature: [thermal]

Explanation: This fault occurs when the temperature of an FI I/O module has been out of the operating range, and the issue is not recoverable. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco FPR equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco FPR equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the FI I/O module.
2. Review the Cisco FPR Site Preparation Guide to ensure the chassis and FI I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco FPR chassis and FI I/O module are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.

7. Replace the faulty FI I/O modules.
8. Use the Cisco FPR power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
9. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

```

fltEquipmentSwitchIOCardCpuThermalThresholdCritical

Fault Code: F0760

Message: [side] FI IOM [chassisId]/[id] ([switchId]) processor temperature exceeded the limit

Explanation: This fault typically occurs when the processor temperature in FI-IOM exceeds the limit.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the FI I/O module.

2. Review the Cisco FPR Site Preparation Guide to ensure the chassis and FI I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco FPR chassis and FI I/O module are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Replace the faulty FI I/O modules.
8. Use the Cisco FPR power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Cause: equipment-degraded
mibFaultCode: F0810
mibFaultName: fltStorageLocalDiskDegraded
moClass: storage:LocalDisk
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/disk-[id]
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/disk-[id]
```

fltStorageLocalDiskSlotEpUnusable

Fault Code: F0811

Message: Local disk [id] on server [serverId] is not usable by the operating system

Explanation: This fault occurs when the server disk drive is in a slot that is not supported by the storage controller.

Recommended Action: If you see this fault, take the following actions:

1. Insert the server disk drive in a supported slot.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: equipment-inoperable
mibFaultCode: F0811
mibFaultName: fltStorageLocalDiskSlotEpUnusable
moClass: storage:LocalDiskSlotEp
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/disk-[id]
Affected MO: sys/rack-unit-[id]/board/disk-[id]
```

fltStorageItemCapacityExceeded

Fault Code: F0812

Message: Disk usage for partition [name] on fabric interconnect [id] exceeded 70%

Explanation: This fault occurs when the partition disk usage exceeds 70% but is less than 90%.

Recommended Action: If you see this fault, take the following actions:

1. Reduce the partition disk usage to less than 70% by deleting unused and unnecessary files.

2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: capacity-exceeded
mibFaultCode: F0812
mibFaultName: fltStorageItemCapacityExceeded
moClass: storage:Item
Type: environmental
autoCleared: true
Affected MO: sys/switch-[id]/stor-part-[name]
```

fltStorageItemCapacityWarning

Fault Code: F0813

Message: Disk usage for partition [name] on fabric interconnect [id] exceeded 90%

Explanation: This fault occurs when the partition disk usage exceeds 90%.

Recommended Action: If you see this fault, take the following actions:

1. Reduce the partition disk usage to less than 90% by deleting unused and unnecessary files.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: capacity-exceeded
mibFaultCode: F0813
mibFaultName: fltStorageItemCapacityWarning
moClass: storage:Item
Type: environmental
autoCleared: true
Affected MO: sys/switch-[id]/stor-part-[name]
```

fltStorageItemFilesystemIssues

Fault Code: F0814

Message: Partition [name] on fabric interconnect [id] has file system errors

Explanation: This fault occurs when the partition develops faults

Recommended Action: If you see this fault, take the following actions:

1. Create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-degraded
mibFaultCode: F0814
mibFaultName: fltStorageItemFilesystemIssues
moClass: storage:Item
Type: equipment
```

```
autoCleared: true
Affected MO: sys/switch-[id]/stor-part-[name]
```

fltStorageRaidBatteryInoperable

Fault Code: F0815

Message: RAID Battery on server [chassisId]/[slotId] operability: [operability]. Reason: [operQualifierReason]RAID Battery on server [id] operability: [operability]. Reason: [operQualifierReason]

Explanation: This fault occurs when the RAID backup unit is not operational.

Recommended Action: If you see this fault, take the following actions:

1. If the backup unit is a battery, replace the battery.
2. If the backup unit is a supercapacitor type and the supercapacitor is missing, verify its presence and supply if missing.
3. If the backup unit is a supercapacitor type and the TFM is missing, verify its presence and supply if missing.
4. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-inoperable
mibFaultCode: F0815
mibFaultName: fltStorageRaidBatteryInoperable
moClass: storage:RaidBattery
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/raid-battery
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/raid-battery
```

fltStorageMezzFlashLifeConfiguration-error

Fault Code: F0816

Message: Flash Life on server [chassisId]/[slotId] flashStatus: [flashStatus]

Explanation: This fault occurs when FPRM is not able to retrieve the Fusion-io life left due to an error.

Recommended Action: If you see this fault, take the following actions:

1. Upgrade Fusion-io Firmware.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: info
Cause: configuration-error
mibFaultCode: F0816
mibFaultName: fltStorageMezzFlashLifeConfigurationError
moClass: storage:MezzFlashLife
Type: equipment
autoCleared: true
```

```
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/flash-life-
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/flash-life-
```

fltStorageMezzFlashLifeDegraded

Fault Code: F0817

Message: Flash Life on server [chassisId]/[slotId] flashStatus: [flashStatus]

Explanation: This fault occurs when the Fusion-io life left is 10 percent or less.

Recommended Action: If you see this fault, take the following actions:

1. Continue to monitor the the Fusion-io life left and if it reaches 0 percent, the adapter might revert to read-only.

Fault Details

```
Severity: warning
Cause: equipment-degraded
mibFaultCode: F0817
mibFaultName: fltStorageMezzFlashLifeDegraded
moClass: storage:MezzFlashLife
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/flash-life-
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/flash-life-
```

fltStorageRaidBatteryDegraded

Fault Code: F0818

Message: RAID Battery on server [chassisId]/[slotId] operability: [operability]. Reason: [operQualifierReason]RAID Battery on server [id] operability: [operability]. Reason: [operQualifierReason]

Explanation: This fault occurs when the RAID backup unit is degraded.

Recommended Action: If you see this fault, take the following actions:

1. If the fault reason indicates the backup unit is in a relearning cycle, wait for relearning to complete.
2. If the fault reason indicates the backup unit is about to fail, replace the backup unit.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: equipment-degraded
mibFaultCode: F0818
mibFaultName: fltStorageRaidBatteryDegraded
moClass: storage:RaidBattery
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/raid-battery
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/raid-battery
```

fltStorageRaidBatteryRelearnAborted

Fault Code: F0819

Message: RAID Battery on server [chassisId]/[slotId] operability: [operability]. Reason: [operQualifierReason]RAID Battery on server [id] operability: [operability]. Reason: [operQualifierReason]

Explanation: NOTE: This fault is not currently implemented by Firepower ManagerThis fault is present only as a placeholder, possibly for another release,such as stand-alone rack servers.--- This fault occurs when the backup unit's relearning cycle was aborted.

Recommended Action: If you see this fault, take the following actions:

1. Retry the learn cycle.
2. Replace the backup unit.

Fault Details

```
Severity: minor
Cause: equipment-degraded
mibFaultCode: F0819
mibFaultName: fltStorageRaidBatteryRelearnAborted
moClass: storage:RaidBattery
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/raid-battery
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/raid-battery
```

fltStorageRaidBatteryRelearnFailed

Fault Code: F0820

Message: RAID Battery on server [chassisId]/[slotId] operability: [operability]. Reason: [operQualifierReason]RAID Battery on server [id] operability: [operability]. Reason: [operQualifierReason]

Explanation: NOTE: This fault is not currently implemented by Firepower ManagerThis fault is present only as a placeholder, possibly for another release,such as stand-alone rack servers.--- This fault occurs when the backup unit's relearning cycle has failed.

Recommended Action: If you see this fault, take the following actions:

1. Retry the learn cycle.
2. Replace the backup unit.

Fault Details

```
Severity: major
Cause: equipment-degraded
mibFaultCode: F0820
mibFaultName: fltStorageRaidBatteryRelearnFailed
moClass: storage:RaidBattery
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/raid-battery
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/raid-battery
```

fltStorageControllerPatrolReadFailed

Fault Code: F0822

Message: Controller [id] on server [chassisId]/[slotId] had a patrol read failure. Reason: [operQualifierReason]Controller [id] on server [id] had a patrol read failure. Reason: [operQualifierReason]

Explanation: NOTE: This fault is not currently implemented by Firepower ManagerThis fault is present only as a placeholder, possibly for another release,such as stand-alone rack servers.--- This fault occurs when a Patrol Read operation has failed.

Recommended Action: Re-run the patrol read operation.

Fault Details

```
Severity: warning
Cause: operation-failed
mibFaultCode: F0822
mibFaultName: fltStorageControllerPatrolReadFailed
moClass: storage:Controller
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]
```

fltStorageControllerInoperable

Fault Code: F0823

Message: Controller [id] on server [chassisId]/[slotId] is inoperable. Reason: [operQualifierReason]Controller [id] on server [id] is inoperable. Reason: [operQualifierReason]

Explanation: This fault occurs when the storage controller is inaccessible.

Recommended Action: For PCI and mezz-based storage controllers, check the seating of the storage controller. If the problem persists, replace the controller.

Fault Details

```
Severity: critical
Cause: equipment-inoperable
mibFaultCode: F0823
mibFaultName: fltStorageControllerInoperable
moClass: storage:Controller
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]
```

fltStorageLocalDiskRebuildFailed

Fault Code: F0824

Message: Local disk [id] on server [chassisId]/[slotId] operability: [operability]. Reason: [operQualifierReason]Local disk [id] on server [id] operability: [operability]. Reason: [operQualifierReason]

Explanation: NOTE: This fault is not currently implemented by Firepower ManagerThis fault is present only as a placeholder, possibly for another release,such as stand-alone rack servers.--- This fault occurs when a rebuild operation has failed. This may cause a degradation in performance.

Recommended Action: If you see this fault, take the following action:

1. Retry the rebuild operation.

2. Replace the disk.

Fault Details

```
Severity: major
Cause: equipment-offline
mibFaultCode: F0824
mibFaultName: fltStorageLocalDiskRebuildFailed
moClass: storage:LocalDisk
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/disk-[id]
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/disk-[id]
```

fltStorageLocalDiskCopybackFailed

Fault Code: F0825

Message: Local disk [id] on server [chassisId]/[slotId] operability: [operability]. Reason: [operQualifierReason]Local disk [id] on server [id] operability: [operability]. Reason: [operQualifierReason]

Explanation: NOTE: This fault is not currently implemented by Firepower ManagerThis fault is present only as a placeholder, possibly for another release,such as stand-alone rack servers.--- This fault occurs when a copyback operation has failed. This may cause a degradation in performance.

Recommended Action: If you see this fault, take the following action:

1. Retry the copyback operation.
2. Replace the disk.

Fault Details

```
Severity: major
Cause: equipment-offline
mibFaultCode: F0825
mibFaultName: fltStorageLocalDiskCopybackFailed
moClass: storage:LocalDisk
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/disk-[id]
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/disk-[id]
```

fltStorageLocalDiskMissing

Fault Code: F0826

Message: Local disk [id] missing on server [chassisId]/[slotId]Local disk [id] missing on server [id]

Explanation: This fault occurs when a disk is missing.

Recommended Action: If you see this fault, take the following action:

1. Insert the disk.

Fault Details

```
Severity: major
Cause: equipment-missing
```

```
mibFaultCode: F0826
mibFaultName: fltStorageLocalDiskMissing
moClass: storage:LocalDisk
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/disk-[id]
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/disk-[id]
```

fltStorageVirtualDriveInoperable

Fault Code: F0827

Message: Virtual drive [id] on server [chassisId]/[slotId] operability: [operability]. Reason: [operQualifierReason]Virtual drive [id] on server [id] operability: [operability]. Reason: [operQualifierReason]

Explanation: This fault occurs when the virtual drive has become inoperable.

Recommended Action: If you see this fault, take the following actions:

1. Verify the presence and health of disks that are used by the virtual drive.
2. If applicable, reseat or replace used disks.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: equipment-inoperable
mibFaultCode: F0827
mibFaultName: fltStorageVirtualDriveInoperable
moClass: storage:VirtualDrive
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/vd-[id]
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/vd-[id]
```

fltStorageVirtualDriveDegraded

Fault Code: F0828

Message: Virtual drive [id] on server [chassisId]/[slotId] operability: [operability]. Reason: [operQualifierReason]Virtual drive [id] on server [id] operability: [operability]. Reason: [operQualifierReason]

Explanation: This fault occurs when the virtual drive has become degraded. The fault description will contain the physical drive state, which indicates the reason for the degradation.

Recommended Action: If you see this fault, take the following actions:

1. If the drive is performing a consistency check operation, wait for the operation to complete.
2. Verify the presence and health of disks that are used by the virtual drive.
3. If applicable, reseat or replace used disks.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
```

```
Cause: equipment-degraded
mibFaultCode: F0828
mibFaultName: fltStorageVirtualDriveDegraded
moClass: storage:VirtualDrive
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/vd-[id]
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/vd-[id]
```

fltStorageVirtualDriveReconstructionFailed

Fault Code: F0829

Message: Virtual drive [id] on server [chassisId]/[slotId] operability: [operability]. Reason: [operQualifierReason]Virtual drive [id] on server [id] operability: [operability]. Reason: [operQualifierReason]

Explanation: NOTE: This fault is not currently implemented by Firepower ManagerThis fault is present only as a placeholder, possibly for another release,such as stand-alone rack servers.--- This fault occurs when a drive reconstruction operation has failed. This may cause a degradation in performance.

Recommended Action: If you see this fault, take the following action:

1. Retry the reconstruction operation.
2. Delete and recreate the virtual drive.

Fault Details

```
Severity: major
Cause: equipment-degraded
mibFaultCode: F0829
mibFaultName: fltStorageVirtualDriveReconstructionFailed
moClass: storage:VirtualDrive
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/vd-[id]
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/vd-[id]
```

fltStorageVirtualDriveConsistencyCheckFailed

Fault Code: F0830

Message: Virtual drive [id] on server [chassisId]/[slotId] operability: [operability]. Reason: [operQualifierReason]Virtual drive [id] on server [id] operability: [operability]. Reason: [operQualifierReason]

Explanation: NOTE: This fault is not currently implemented by Firepower ManagerThis fault is present only as a placeholder, possibly for another release,such as stand-alone rack servers.--- This fault occurs when a drive consistency check operation has failed. This may cause a degradation in performance.

Recommended Action: If you see this fault, take the following action:

1. Retry the consistency check operation.
2. Delete and recreate the virtual drive.

Fault Details

```
Severity: major
Cause: equipment-degraded
```

```
mibFaultCode: F0830
mibFaultName: fltStorageVirtualDriveConsistencyCheckFailed
moClass: storage:VirtualDrive
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/vd-[id]
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/vd-[id]
```

fltStorageFlexFlashControllerInoperable

Fault Code: F0831

Message: FlexFlash Controller [id] on server [chassisId]/[slotId] is inoperable. Reason: [operQualifierReason] Status: [controllerHealth]FlexFlash Controller [id] on server [id] is inoperable. Reason: [operQualifierReason] Status: [controllerHealth]

Explanation: This fault occurs when the flexflash controller is inaccessible.

Recommended Action: If you see this fault, take the following action:

1. If reported as Firmware Mismatch, update the CIMC and Board Controller firmware
2. If reported as Fatal Error, reset the CIMC and update Board Controller firmware
3. For PCI and mezz-based controllers, check the seating of the storage controller. If the problem persists, replace the controller

Fault Details

```
Severity: major
Cause: equipment-inoperable
mibFaultCode: F0831
mibFaultName: fltStorageFlexFlashControllerInoperable
moClass: storage:FlexFlashController

autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-flexflash-[id]
Affected MO: sys/rack-unit-[id]/board/storage-flexflash-[id]
```

fltStorageFlexFlashCardInoperable

Fault Code: F0832

Message: FlexFlash Card [slotNumber] on server [chassisId]/[slotId] is inoperable. Reason: [operQualifierReason]FlexFlash Card [slotNumber] on server [id] is inoperable. Reason: [operQualifierReason]

Explanation: This fault occurs when the flexflash card is inaccessible.

Recommended Action: If you see this fault, take the following action:

1. If reported as Write Protected, then remove write protection from the card
2. If reported as Invalid Capacity, use an OS disk utility to delete/recreate the partitions
3. If the above action did not resolve the issue, replace the card

Fault Details

```
Severity: major
Cause: equipment-inoperable
```

```
mibFaultCode: F0832
mibFaultName: fltStorageFlexFlashCardInoperable
moClass: storage:FlexFlashCard
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-flexflash-[id]/card-[slotNumber]
Affected MO: sys/rack-unit-[id]/board/storage-flexflash-[id]/card-[slotNumber]
```

fltStorageFlexFlashCardMissing

Fault Code: F0833

Message: FlexFlash Card [slotNumber] missing on server [chassisId]/[slotId]FlexFlash Card [slotNumber] missing on server [id]

Explanation: This fault occurs when a FlexFlash Card is missing.

Recommended Action: If you see this fault, take the following action:

1. Insert the Card.

Fault Details

```
Severity: info
Cause: equipment-missing
mibFaultCode: F0833
mibFaultName: fltStorageFlexFlashCardMissing
moClass: storage:FlexFlashCard
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-flexflash-[id]/card-[slotNumber]
Affected MO: sys/rack-unit-[id]/board/storage-flexflash-[id]/card-[slotNumber]
```

fltStorageFlexFlashVirtualDriveDegraded

Fault Code: F0834

Message: FlexFlash Virtual Drive RAID degraded on server [chassisId]/[slotId]. Reason: [raidState]FlexFlash Virtual Drive RAID degraded on server [id]. Reason: [raidState]

Explanation: This fault occurs when the flexflash raid is degraded.

Recommended Action: If you see this fault, take the following action:

1. Re-acknowledge the server by setting the flexflash scrub policy to yes. Please note that this action will erase all data in the card(s)
2. Verify the health of the controller/card(s). If the above action did not resolve the issue, replace the card(s)

Fault Details

```
Severity: minor
Cause: equipment-degraded
mibFaultCode: F0834

```

fltIppoolPoolEmpty

Fault Code: F0844

Message: IP pool [name] is empty

Explanation: This fault typically occurs when an IP address pool does not contain any IP addresses.

Recommended Action: If you see this fault, take the following actions:

1. If the pool is in use, add a block of IP addresses to the pool.
2. If the pool is not in use, ignore the fault.

Fault Details

```
Severity: minor
Cause: empty-pool
mibFaultCode: F0844
mibFaultName: fltIppoolPoolEmpty
moClass: ippool:Pool
Type: server
autoCleared: true
Affected MO: fabric/lan/network-sets/ip-pool-[name]
Affected MO: org-[name]/ip-pool-[name]
```

fltAaaProviderGroupProvidergroup

Fault Code: F0850

Message: For [dn]: Server Group with name [name] already exist, You need to specify a unique name for this object.

Explanation: This fault typically occurs because Cisco FPR Manager has detected multiple provider-groups with same name.

Recommended Action: If you see this fault, take the following actions:

1. Need to delete the duplicate provider group configured causing this problem.

Fault Details

```
Severity: major
Cause: provider-group-already-exists
mibFaultCode: F0850
mibFaultName: fltAaaProviderGroupProvidergroup
moClass: aaa:ProviderGroup

fltAaaConfigServergroup

Fault Code: F0852

Message: For [dn]: [realm] Server Group with name [providerGroup] doesn't exist or is not deployed.

Explanation: This fault typically occurs because Cisco FPR Manager has detected an unsupported authentication method.

Recommended Action: If you see this fault, take the following actions:

1. Verify that server group configured for authentication is present.
2. If the server group is not configured, create the server group to use for authentication.

Fault Details

```
Severity: critical
Cause: invalid-server-group
```

```
mibFaultCode: F0852
mibFaultName: fltAaaConfigServergroup
moClass: aaa:Config
Type: security
autoCleared: true
Affected MO: sys/auth-realm/console-auth

Affected MO: sys/auth-realm/domain-[name]/domain-auth
```

fltPkiKeyRingStatus

Fault Code: F0853

Message: [name] Keyring's certificate is invalid, reason: [certStatus].

Explanation: This fault occurs when certificate status of Keyring has become invalid.

Recommended Action: None set.

Fault Details

```
Severity: major
Cause: invalid-keyring-certificate
mibFaultCode: F0853
mibFaultName: fltPkiKeyRingStatus
moClass: pki:KeyRing
Type: security
autoCleared: true
Affected MO: sys/pki-ext/keyring-[name]
```

fltPkiKeyRingModulus

Fault Code: F0854

Message: [name] Keyring's RSA modulus is invalid.

Explanation: This fault occurs when RSA keyring is created without modulus set.

Recommended Action: None set.

Fault Details

```
Severity: major
Cause: invalid-keyring-modulus
mibFaultCode: F0854
mibFaultName: fltPkiKeyRingModulus
moClass: pki:KeyRing
Type: security
autoCleared: true
Affected MO: sys/pki-ext/keyring-[name]
```

fltPkiTPStatus

Fault Code: F0855

Message: [name] Trustpoint's cert-chain is invalid, reason: [certStatus].

Explanation: This fault occurs when certificate status of TrustPoint has become invalid.

Recommended Action: None set.

Fault Details

```
Severity: major
Cause: invalid-trustpoint-cert-chain
mibFaultCode: F0855
mibFaultName: fltPkiTPStatus
moClass: pki:TP
Type: security
autoCleared: true
Affected MO: sys/pki-ext/tp-[name]
```

fltAaaRoleRoleNotDeployed

Fault Code: F0856

Message: Role [name] can't be deployed. Error: [configStatusMessage]

Explanation: This fault typically occurs because Cisco FPR Manager has detected an unsupported role.

Recommended Action: If you see this fault, take the following actions:

1. Verify that total number of roles is less than maximum supported roles.
2. Verify that sum of privileges across all roles is less than maximum privileges sum.

Fault Details

```
Severity: critical
Cause: role-config-error
mibFaultCode: F0856
mibFaultName: fltAaaRoleRoleNotDeployed
moClass: aaa:Role
Type: security
autoCleared: true
Affected MO: sys/user-ext/role-[name]
```

fltAaaLocaleLocaleNotDeployed

Fault Code: F0857

Message: Locale [name] can't be deployed. Error: [configStatusMessage]

Explanation: This fault typically occurs because Cisco FPR Manager has detected an unsupported locale.

Recommended Action: If you see this fault, take the following actions:

1. Verify that total number of locale is less than maximum supported roles.

Fault Details

```
Severity: critical
Cause: locale-config-error
mibFaultCode: F0857
mibFaultName: fltAaaLocaleLocaleNotDeployed
moClass: aaa:Locale
Type: security
autoCleared: true
Affected MO: sys/user-ext/locale-[name]
```

fltAaaOrgLocaleOrgNotPresent

Fault Code: F0858

Message: Locale Org [name] can't be deployed. Error: [configStatusMessage]

Explanation: This fault typically occurs because Cisco FPR Manager has detected an unidentified org reference.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the org dn referenced in this Org is exists, if not create the same.

Fault Details

```
Severity: warning
Cause: locale-org-config-error
mibFaultCode: F0858
mibFaultName: fltAaaOrgLocaleOrgNotPresent
moClass: aaa:Org
Type: security
autoCleared: true
Affected MO: sys/user-ext/locale-[name]/org-[name]
```

fltAaaUserRoleUserRoleNotDeployed

Fault Code: F0859

Message: For user: [name] role [name] can't be assigned. Error: [configStatusMessage].For Ldap Group: [name] role [name] can't be assigned. Error: [configStatusMessage].

Explanation: This fault typically occurs because Cisco FPR Manager has detected an unsupported user role for ldap groups or local users.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the role is present .
2. Verify that the role is applied .
3. Verify that the role is compatible with locales assigned to ldap group or local user .

Fault Details

```
Severity: critical
Cause: user-role-config-error
mibFaultCode: F0859
mibFaultName: fltAaaUserRoleUserRoleNotDeployed
moClass: aaa:UserRole
Type: security
autoCleared: true
Affected MO: sys/ldap-ext/ldapgroup-[name]/role-[name]
Affected MO: sys/user-ext/remoteuser-[name]/role-[name]
Affected MO: sys/user-ext/user-[name]/role-[name]
```

fltAaaUserLocaleUserLocaleNotDeployed

Fault Code: F0860

Message: For user: [name] locale [name] can't be assigned. Error: [configStatusMessage].For Ldap Group: [name] locale [name] can't be assigned. Error: [configStatusMessage].

Explanation: This fault typically occurs because Cisco FPR Manager has detected an unsupported user locale for ldap groups or local users.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the locale is present .
2. Verify that the locale is applied .
3. Verify that the locale is compatible with roles assigned to ldap group or local user .

Fault Details

```
Severity: critical
Cause: user-locale-config-error
mibFaultCode: F0860
mibFaultName: fltAaaUserLocaleUserLocaleNotDeployed
moClass: aaa:UserLocale
Type: security
autoCleared: true

```

fltPkiKeyRingKeyRingNotDeployed

Fault Code: F0861

Message: Keyring [name] can't be deployed. Error: [configStatusMessage]

Explanation: This fault typically occurs because Cisco FPR Manager has detected an invalid Keyring.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the trust point configured for this keyring is present .
2. Verify that the trust point found above is applied .

Fault Details

```
Severity: critical
Cause: keyring-config-error
mibFaultCode: F0861
mibFaultName: fltPkiKeyRingKeyRingNotDeployed
moClass: pki:KeyRing
Type: security
autoCleared: true
Affected MO: sys/pki-ext/keyring-[name]
```

fltCommSnmpSyscontactEmpty

Fault Code: F0862

Message: Manager cannot deploy an empty value of SNMP Syscontact when Callhome is enabled. The previous value [sysContact] for SNMP Syscontact has been retained.

Explanation: This fault typically occurs when FPR Manager receives an invalid configuration from FPR Central wherein SNMP Syscontact is set to empty when Callhome is enabled.

Recommended Action: If you see this fault, please ensure that the SNMP Syscontact field on FPR Central is configured correctly for the domain group corresponding to this FPRM.

Fault Details

```
Severity: warning
Cause: snmp-config-error
mibFaultCode: F0862
mibFaultName: fltCommSnmpSyscontactEmpty
moClass: comm:Snmp
Type: configuration
autoCleared: true
Affected MO: sys/svc-ext/snmp-svc
```

fltCommDateTimeCommTimeZoneInvalid

Fault Code: F0863

Message: Timezone:[timezone] is invalid

Explanation: This fault typically occurs because Cisco FPR Manager has detected an unsupported role.

Recommended Action: If you see this fault, take the following actions:

1. Verify that total number of roles is less than maximum supported roles.
2. Verify that sum of privileges across all roles is less than maximum privileges sum.

Fault Details

```
Severity: minor
Cause: timezone-file-not-exists
mibFaultCode: F0863
mibFaultName: fltCommDateTimeCommTimeZoneInvalid
moClass: comm:DateTime
Type: configuration
autoCleared: true
Affected MO: sys/svc-ext/datetime-svc
```

fltAaaUserLocalUserNotDeployed

Fault Code: F0864

Message: Local User [name] can't be deployed. Error: [configStatusMessage]

Explanation: This fault typically occurs because Cisco FPR Manager has detected an invalid system user.

Recommended Action: If you see this fault, take the following actions:

1. Verify that local user name is not used by snmp users.

Fault Details

```
Severity: major
Cause: user-config-error
mibFaultCode: F0864
mibFaultName: fltAaaUserLocalUserNotDeployed
```

```
moClass: aaa:User
Type: security
autoCleared: true
Affected MO: sys/user-ext/user-[name]
```

fltCommSnmpUserSnmpUserNotDeployed

Fault Code: F0865

Message: SNMP User [name] can't be deployed. Error: [configStatusMessage]

Explanation: This fault typically occurs because Cisco FPR Manager has detected an invalid snmp user.

Recommended Action: If you see this fault, take the following actions:

1. Verify that snmp user name is not used by system users.

Fault Details

```
Severity: major
Cause: snmp-user-config-error
mibFaultCode: F0865
mibFaultName: fltCommSnmpUserSnmpUserNotDeployed
moClass: comm:SnmpUser
Type: configuration
autoCleared: true
Affected MO: sys/svc-ext/snmp-svc/snmpv3-user-[name]
```

fltCommSvcEpCommSvcNotDeployed

Fault Code: F0866

Message: Communication Service configuration can't be deployed. Error: [configStatusMessage]

Explanation: This fault typically occurs because Cisco FPR Manager has detected an invalid communication policy confiuration.

Recommended Action: If you see this fault, take the following actions:

1. Verify that ports configured across all communication services is unique.

Fault Details

```
Severity: major
Cause: comm-svc-config-error
mibFaultCode: F0866
mibFaultName: fltCommSvcEpCommSvcNotDeployed
moClass: comm:SvcEp
Type: configuration
autoCleared: true
Affected MO: sys/svc-ext
```

fltSysdebugLogExportStatusLogExportFailure

Fault Code: F0871

Message: Log export to remote server failed from [switchId]:[exportFailureReason]

Explanation: This fault occurs when Cisco Firepower Manager cannot transfer a log file to a remote server. This is typically the result of one of the following issues:

- The remote server is not accessible.
- One or more of the parameters for the remote server that are specified for the log export target, such as path, username, password, ssh-key and server name, are incorrect.

Recommended Action: If you see this fault, take the following actions:

1. Verify the connectivity to the remote server.
2. Verify the path information of the remote server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: server-error
mibFaultCode: F0871
mibFaultName: fltSysdebugLogExportStatusLogExportFailure
moClass: sysdebug:LogExportStatus
Type: sysdebug
autoCleared: true
Affected MO: sys/sysdebug/log-export-policy/log-export-status-[switchId]
```

fltSysdebugAutoCoreFileExportTargetAutoCoreTransferFailure

Fault Code: F0872

Message: Auto core transfer failure at remote server [hostname]:[path] [exportFailureReason]

Explanation: This fault occurs when Cisco Firepower Manager cannot transfer a core file to a remote TFTP server. This is typically the result of one of the following issues:

- The remote TFTP server is not accessible.
- One or more of the parameters for the TFTP server that are specified for the core export target, such as path, port, and server name, are incorrect.

Recommended Action: If you see this fault, take the following actions:

1. Verify the connectivity to the remote server.
2. Verify the path information of the remote server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: tftp-server-error
mibFaultCode: F0872

Type: sysdebug
autoCleared: true
Affected MO: sys/sysdebug/file-export
```

fltProcessorUnitInoperable

Fault Code: F0899

Message: Processor [id] on server [chassisId]/[slotId] operability: [operability]

Explanation: This fault occurs in the unlikely event that processor is inoperable.

Recommended Action: If you see this fault, take the following actions:

1. If the fault occurs on a blade server processor, remove the server from the chassis and then reinsert it.
2. In Cisco FPR Manager, decommission and then recommission the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-inoperable
mibFaultCode: F0899
mibFaultName: fltProcessorUnitInoperable
moClass: processor:Unit
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/cpu-[id]
Affected MO: sys/chassis-[id]/blade-[slotId]/npu/cpu-[id]
Affected MO: sys/rack-unit-[id]/board/cpu-[id]
```

fltProcessorUnitThermalNonCritical

Fault Code: F0900

Message: Processor [id] on server [chassisId]/[slotId] temperature: [thermal]Processor [id] on server [id] temperature: [thermal]

Explanation: This fault occurs when the processor temperature on a blade or rack server exceeds a non-critical threshold value, but is still below the critical threshold. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco FPR equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco FPR equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the server.
2. Review the Cisco FPR Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco FPR chassis or rack server are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.

6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco FPR power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: info
Cause: thermal-problem

fltProcessorUnitThermalThresholdNonRecoverable

Fault Code: F0902

Message: Processor [id] on server [chassisId]/[slotId] temperature: [thermal]Processor [id] on server [id] temperature: [thermal]

Explanation: This fault occurs when the processor temperature on a blade or rack server has been out of the operating range, and the issue is not recoverable. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco FPR equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco FPR equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

```

fltProcessorUnitVoltageThresholdNonCritical

Fault Code: F0903

Message: Processor [id] on server [chassisId]/[slotId] voltage: [voltage]Processor [id] on server [id] voltage: [voltage]

Explanation: This fault occurs when the processor voltage is out of normal operating range, but hasn't yet reached a critical stage. Normally the processor recovers itself from this situation

Recommended Action: If you see this fault, take the following actions:

1. Monitor the processor for further degradation.
2. If the fault occurs on a blade server processor, remove the server from the chassis and then reinsert it.
3. In Cisco FPR Manager, decommission and then recommission the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltNetworkElementInoperable

Fault Code: F0977

Message: Fabric Interconnect [id] operability: [operability]

Explanation: This fault typically occurs when the fabric interconnect cluster controller reports that the membership state of the fabric interconnect is down, indicating that the fabric interconnect is inoperable.

Recommended Action: If you see this fault, take the following actions:

1. Verify that both fabric interconnects in the cluster are running the same Kernel and System software versions.
2. Verify that the fabric interconnects software version and the Cisco FPR Manager software versions are the same.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
```

```
Cause: equipment-inoperable
mibFaultCode: F0977
mibFaultName: fltNetworkElementInoperable
moClass: network:Element
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]
```

fltNetworkElementRemoved

Fault Code: F0978

Message: Fabric Interconnect [id] operability: [operability]

Explanation: This fault occurs when the fabric interconnect is removed in a clustering setup.

Recommended Action: If you see this fault, take the following actions:

1. Reinsert the removed fabric interconnect back into the chassis (applicable to FPR-Mini only).
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: equipment-removed
mibFaultCode: F0978
mibFaultName: fltNetworkElementRemoved
moClass: network:Element
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]
```

fltSwVlanPortNsResourceStatus

Fault Code: F0979

Message: Vlan-Port Resource exceeded

Explanation: This fault occurs when the total number of configured VLANs in the Cisco FPR instance has exceeded the allowed maximum number of configured VLANs on the fabric interconnect.

Recommended Action: If you see this fault, take the following actions:

1. In the Cisco FPR Manager CLI or Cisco FPR Manager GUI, check the port VLAN count to determine by how many VLANs the system is over the maximum.
2. Reduce the VLAN port count in one of the following ways:
   - Delete VLANs configured on the LAN cloud.
   - Delete VLANs configured on vNICs.
   - Unconfigure one or more vNICs.
   - Unconfigure one or more uplink Ethernet ports on the fabric interconnect.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: limit-reached
mibFaultCode: F0979
mibFaultName: fltSwVlanPortNsResourceStatus
moClass: sw:VlanPortNs
Type: management
autoCleared: true
Affected MO: sys/switch-[id]/vlan-port-ns
```

fltSwVlanPortNsResourceStatusWarning

Fault Code: F0980

Message: Total Available Vlan-Port Count on switch [switchId] is below 10%

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: near-max-limit
mibFaultCode: F0980
mibFaultName: fltSwVlanPortNsResourceStatusWarning
moClass: sw:VlanPortNs
Type: management
autoCleared: true
Affected MO: sys/switch-[id]/vlan-port-ns
```

fltNetworkElementInventoryFailed

Fault Code: F0981

Message: Fabric Interconnect [id] inventory is not complete [inventoryStatus]

Explanation: Cisco FPR Manager raises this fault when the management subsystem is unable to perform an inventory of the physical components, such as I/O cards or physical ports.

Recommended Action: If you see this fault, take the following actions:

1. Ensure that both fabric interconnects in an HA cluster are running the same software versions.
2. Ensure that the fabric interconnect software is a version that is compatible with the Cisco FPR Manager software.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: inventory-failed
mibFaultCode: F0981
mibFaultName: fltNetworkElementInventoryFailed
moClass: network:Element
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]
```

fltNetworkElementThermalThresholdCritical

Fault Code: F0982

Message: Fabric Interconnect [id] temperature: [thermal]

Explanation: This fault occurs when the temperature of a Fabric Interconnect exceeds a critical threshold value. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco FPR equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment.
- Cisco FPR equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the Fabric Interconnect.
2. Review the Cisco FPR Site Preparation Guide to ensure the Fabric Interconnects have adequate airflow, including front and back clearance.
3. Verify that the air flows are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
6. Replace faulty Fabric Interconnects.
7. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: thermal-problem
mibFaultCode: F0982
mibFaultName: fltNetworkElementThermalThresholdCritical
moClass: network:Element
Type: environmental
autoCleared: true
Affected MO: sys/switch-[id]
```

fltNetworkElementMemoryerror

Fault Code: F0983

Message: Fabric Interconnect [id] memory less than expected! Total Memory: [totalMemory] and Expected Memory: [expectedMemory]

Explanation: This fault occurs when the total memory on FI is less than expected.

Recommended Action: If you see this fault, take the following actions:

1. You will need to do a manual physical inspection of the DIMMs on the FI. Try removing and reinserting the DIMMs, and verify the Total Memory. If this does not resolve the issue, one of the DIMMs has gone bad and needs to be replaced.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: memory-error
mibFaultCode: F0983
mibFaultName: fltNetworkElementMemoryerror
moClass: network:Element
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]
```

fltNetworkOperLevelExtraprimaryvlans

Fault Code: F0984

Message: Fabric Interconnect [id]: Number of primary vlans exceeds the max limit on the FI: Number of Primary Vlans: [primaryVlanCount] and Max primary vlans allowed: [maxPrimaryVlanCount]

Explanation: This fault occurs when the fabric interconnect has more number of primary vlans than what is supported.

Recommended Action: If you see this fault, take the following actions:

1. It is recommended that operator should delete the extra primary vlans than are there in the FI. System may appear to be normally functioning even with these extra primary vlans in place. However there may be performance issues observed as the system is operating above the recommended scale limits..
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: extra-primary-vlans
mibFaultCode: F0984
mibFaultName: fltNetworkOperLevelExtraprimaryvlans
moClass: network:OperLevel
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]/oper-level
```

fltNetworkOperLevelExtrasecondaryvlans

Fault Code: F0985

Message: Fabric Interconnect [id]: Number of secondary vlans exceeds the max limit on the FI: Number of secondary vlans: [secondaryVlanCount] and Max secondary vlans allowed: [maxSecondaryVlanCount]

Explanation: This fault occurs when the fabric interconnect has more number of secondary vlans than what is supported.

Recommended Action: If you see this fault, take the following actions:

1. It is recommended that operator should delete the extra secondary vlans that are there in the FI. System may appear to be normally functioning even with these extra secondary vlans in place. However there may be performance issues observed as the system is operating above the recommended scale limits..
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: extra-secondary-vlans
mibFaultCode: F0985
mibFaultName: fltNetworkOperLevelExtrasecondaryvlans
moClass: network:OperLevel
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]/oper-level
```

fltSwVlanExtrasecondaryvlansperprimary

Fault Code: F0986

Message: Number of secondary vlans associated with the primary vlan [id] in Fabric Interconnect [switchId] exceeds the max limit: Number of secondary vlans: [secVlanPerPrimaryVlanCount] and Max secondary vlans allowed in a primary vlan: 30

Explanation: This fault occurs when the fabric interconnect has more number of secondary vlans per primary vlan than what is supported.

Recommended Action: If you see this fault, take the following actions:

1. It is recommended that operator should delete the extra secondary vlans on this primary vlan that are there in the FI. System may appear to be normally functioning even with these extra secondary vlans on this primary vlan in place. However there may be performance issues observed as the system is operating above the recommended scale limits..
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltFcpoolInitiatorsEmpty

Fault Code: F0987

Message: FC pool [purpose] [name] is empty

Explanation: This fault typically occurs when a WWN pool does not contain any WWNs.

Recommended Action: If you see this fault, take the following actions:

1. If the pool is in use, add a block of WWNs to the pool.
2. If the pool is not in use, ignore the fault.

Fault Details

Severity: minor
Cause: empty-pool
mibFaultCode: F0987
mibFaultName: fltFcpoolInitiatorsEmpty
moClass: fcpool:Initiators
Type: server
autoCleared: true
Affected MO: org-[name]/wwn-pool-[name]

fltOsControllerFailedBladeBootup

Fault Code: F0996

Message: Slot [slotId], boot up failed - recovery in progress

Explanation: This fault occurs when blade failed to boot up.

Recommended Action: If you see this fault, do nothing because the blade will try to recover

1. Reboot the Blade associated with the Slot

Fault Details

Severity: major
Cause: bootup-failure
mibFaultCode: F0996

```
mibFaultName: fltOsControllerFailedBladeBootup
moClass: os:Controller
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/os-ctrl
Affected MO: sys/os-ctrl
Affected MO: sys/rack-unit-[id]/os-ctrl
```

fltOsControllerFailedBootupRecovery

Fault Code: F0997

Message: Slot [slotId], boot up failed - exceeded max number of retries

Explanation: This fault occurs when blade failed to boot up.

Recommended Action: If you see this fault, do the following:

1. Reboot the Blade associated with the Slot

Fault Details

```
Severity: major
Cause: bootup-failure
mibFaultCode: F0997
mibFaultName: fltOsControllerFailedBootupRecovery
moClass: os:Controller
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/os-ctrl
Affected MO: sys/os-ctrl
Affected MO: sys/rack-unit-[id]/os-ctrl
```

fltUuidpoolPoolEmpty

Fault Code: F1014

Message: UUID suffix pool [name] is empty

Explanation: This fault typically occurs when a UUID suffix pool does not contain any UUID suffixes.

Recommended Action: If you see this fault, take the following actions:

1. If the pool is in use, add a block of UUID suffixes to the pool.
2. If the pool is not in use, ignore the fault.

Fault Details

```
Severity: minor
Cause: empty-pool
mibFaultCode: F1014
mibFaultName: fltUuidpoolPoolEmpty
moClass: uuidpool:Pool
Type: server
autoCleared: true
Affected MO: org-[name]/uuid-pool-[name]
```

fltCapabilityCatalogueLoadErrors

Fault Code: F1020

Message: Load errors: File parse errors: [fileParseFailures], provider load failures: [providerLoadFailures], XML element load errors: [loadErrors].

Explanation: The capability catalog failed to load fully. This may be caused by either a faulty FPRM image or a faulty catalog image.

Recommended Action: If you see this fault, take the following actions:

1. Check the version of the capability catalog.
2. Contact Cisco TAC to see if there are known issues with the catalog and if there is a catalog image that will fix the known issues.

Fault Details

```
Severity: major
Cause: load-catalog-failed
mibFaultCode: F1020
mibFaultName: fltCapabilityCatalogueLoadErrors
moClass: capability:Catalogue
Type: management
autoCleared: true
Affected MO: capabilities
```

fltFabricComputeSlotEpMisplacedInChassisSlot

Fault Code: F1038

Message: Server, vendor([vendor]), model([model]), serial([serial]) in slot [chassisId]/[slotId] presence: [presence]

Explanation: This fault typically occurs when Cisco FPR Manager detects a server in a chassis slot that does not match what was previously equipped in the slot.

Recommended Action: If you see this fault, take the following actions:

1. If the previous server was intentionally removed and a new one was inserted, reacknowledge the server.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: server-moved
mibFaultCode: F1038
mibFaultName: fltFabricComputeSlotEpMisplacedInChassisSlot
moClass: fabric:ComputeSlotEp
Type: equipment
autoCleared: true
Affected MO: fabric/server/chassis-[chassisId]/slot-[slotId]
```

fltFabricComputeSlotEpServerIdentificationProblem

Fault Code: F1039

Message: Problem identifying server in slot [chassisId]/[slotId]

Explanation: This fault typically occurs when Cisco FPR Manager encountered a problem identifying the server in a chassis slot.

Recommended Action: If you see this fault, take the following actions:

1. Remove and reinsert the server.
2. Reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

Affected MO: fabric/server/chassis-[chassisId]/slot-[slotId]
```

fltFabricVlanPrimaryVlanMissingForIsolated

Fault Code: F1040

Message: Primary Vlan can not be resolved for isolated vlan [name]

Explanation: This fault typically occurs when Cisco FPR Manager encounters a problem resolving the primary VLAN ID corresponding to a particular isolated VLAN.

Recommended Action: If you see this fault, take the following actions:

1. Associate the isolated VLAN with a valid primary VLAN.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor

fltFabricPinTargetDown

Fault Code: F1045

Message: Pin target is a non-existent interface

Explanation: This fault typically occurs when a PinGroup has an unresolvable target.

Recommended Action: If you see this fault, take the following action:

1. Check whether the PinGroup target is correctly provisioned.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: invalid-target
mibFaultCode: F1045
mibFaultName: fltFabricPinTargetDown
moClass: fabric:PinTarget
Type: network
autoCleared: true
Affected MO: fabric/lan/lan-pin-group-[name]/target-[fabricId]
Affected MO: fabric/san/san-pin-group-[name]/target-[fabricId]
```

fltFabricDceSwSrvPcEpDown

Fault Code: F1046

Message: [type] Member [slotId]/[aggrPortId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership][type] Member [slotId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership]

Explanation: This fault typically occurs when a member port in a fabric port channel is down.

Recommended Action: If you see this fault, take the following action:

1. Check the link connectivity between the FEX or IOM and the fabric interconnect.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltFabricMonSpanConfigFail

Fault Code: F1047

Message: Configuration for traffic monitor [name] failed, reason: [configFailReason]

Explanation: This fault typically occurs when the configuration of a traffic monitoring session is incorrect.

Recommended Action: If you see this fault, correct the configuration problem provided in the fault description.

Fault Details

Severity: major
Cause: config-error
mibFaultCode: F1047
mibFaultName: fltFabricMonSpanConfigFail
moClass: fabric:Mon
Type: network
autoCleared: true
Affected MO: fabric/lanmon/[id]/eth-mon-[name]

fltFabricEpMgrEpTransModeFail

Fault Code: F1048

Message: Port constraint violation on switch [id]: [confQual]

Explanation: This fault occurs when at least one logical interface is misconfigured. This can happen when upgrading to a different type or series of fabric interconnect or when importing a configuration. The configuration must meet the following constraints:

- There must be at most one logical port per fabric interconnect ID/module ID/port ID.

Recommended Action: If you see this fault, take the following action:

1. Create a list of all logical interfaces that are misconfigured and have caused an 'error-misconfigured' fault.
2. For each logical interface, note the reason listed in the fault for the misconfiguration.

3. Log into Cisco FPR Manager and correct each misconfigured logical interface. If you used the Cisco FPR Manager CLI, commit all changes.
4. Review any faults or error messages that describe additional misconfigurations and correct those errors.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: config-error
mibFaultCode: F1048
mibFaultName: fltFabricEpMgrEpTransModeFail
moClass: fabric:EpMgr
Type: network
autoCleared: true
Affected MO: fabric/[id]
```

fltFabricVlanMismatch-a

Fault Code: F1049

Message: VLAN [name] has [overlapStateForA] with another vlan under lan-cloud/appliance-cloud for the fabric interconnect A

Explanation: This fault typically occurs when private vlan properties of VLAN under one cloud conflicts with the private vlan properties of VLAN under another cloud for the fabric interconnect A. The cloud here means either a LAN cloud or an appliance cloud. This issue can stop the usage of this vlan.

Recommended Action: If you see this fault, take the following action:

1. Check the sharing property of the VLAN under both clouds and fabric A referred by its VLAN ID.
2. If the sharing property of the VLAN does not match with the VLAN on the other cloud, then change the sharing property of either of the VLANs, so that it matches with each other.
3. If the VLAN is a isolated/community vlan, check the pubnwname property of the VLAN under both clouds referred by its VLAN ID.
4. If the pubnwname property of the isolated/community VLAN does not match with the isolated/community VLAN on the other cloud, then change the pubnwname property of either of the VLANs, so that it matches with each other.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: vlan-mismatch

Affected MO: fabric/lan/[id]/net-[name]
Affected MO: fabric/lan/net-[name]
```

fltFabricVlanMismatch-b

Fault Code: F1050

Message: VLAN [name] has [overlapStateForB] with another vlan under lan-cloud/appliance-cloud for the fabric interconnect B

Explanation: This fault typically occurs when private vlan properties of VLAN under one cloud conflicts with the private vlan properties of VLAN under another cloud for the fabric interconnect B. The cloud here means either a LAN cloud or an appliance cloud. This issue can stop the usage of this vlan.

Recommended Action: If you see this fault, take the following action:

1. Check the sharing property of the VLAN under both clouds and fabric B referred by its VLAN ID.
2. If the sharing property of the VLAN does not match with the VLAN on the other cloud, then change the sharing property of either of the VLANs, so that it matches with each other.
3. If the VLAN is a isolated/community vlan, check the pubnwname property of the VLAN under both clouds referred by its VLAN ID.
4. If the pubnwname property of the isolated/community VLAN does not match with the isolated/community VLAN on the other cloud, then change the pubnwname property of either of the VLANs, so that it matches with each other.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

Affected MO: fabric/lan/[id]/net-[name]
Affected MO: fabric/lan/net-[name]
```

fltFabricVlanErrorAssocPrimary

Fault Code: F1051

Message: VLAN [name] is in error state because the associated primary vlan [assocPrimaryVlanState]

Explanation: This fault typically occurs when there is an error in associated primary vlan of a secondary VLAN. This issue can stop the usage of this vlan.

Recommended Action: If you see this fault, take the following action:

1. Check the pubnwname property of the VLAN.
2. If the pubnwname is not given or refers to a non-existing primary vlan, give a name of a primary vlan which is in good state.
3. If the pubnwname refers to a vlan which is not a primary vlan, then either change the referred vlan to be a primary vlan or give a different primary vlan.

4. If the pubnwname refers to a valid primary vlan, then check the state of the primary VLAN.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltFabricEthLanEpMissingPrimaryVlan

Fault Code: F1053

Message: Primary vlan missing from fabric: [switchId], port: [slotId]/[aggrPortId]/[portId].Primary vlan missing from fabric: [switchId], port: [slotId]/[portId].

Explanation: This fault occurs when an uplink port or port channel is configured with a primary VLAN that does not exist in the Cisco FPR instance.

Recommended Action: If you see this fault, take the following action:

1. Update the configuration of the port or port channel to include a primary VLAN.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

autoCleared: true
Affected MO: sys/mgmt-entity-[id]
```

fltMgmtEntityElection-failure

Fault Code: F1117

Message: Fabric Interconnect [id], election of primary managemt instance has failed

Explanation: This fault occurs in an unlikely event that the fabric interconnects in a cluster configuration could not reach an agreement for selecting the primary fabric interconnect. This impacts the full HA functionality of the fabric interconnect cluster.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the initial setup configuration is correct on both fabric interconnects.
2. Verify that the L1 and L2 links are properly connected between the fabric interconnects.
3. In the Cisco FPR Manager CLI, run the **cluster force primary** local-mgmt command on one fabric interconnect.
4. Reboot the fabric interconnects.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: election-failure

fltMgmtEntityManagement-services-unresponsive

Fault Code: F1119

Message: Fabric Interconnect [id], management services are unresponsive

Explanation: This fault occurs when management services on a fabric interconnect are unresponsive. This impacts the full HA functionality of the fabric interconnect cluster.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the initial setup configuration is correct on both fabric interconnects.
2. Verify that the L1 and L2 links are properly connected between the fabric interconnects.
3. Reboot the fabric interconnects.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltMgmtEntityHa-not-ready

Fault Code: F1120

Message: Fabric Interconnect [id], HA functionality not ready

Explanation: This fault occurs if Cisco FPR Manager cannot discover or communicate with one or more chassis or rack servers to write the HA Cluster state. This impacts the full HA functionality of the fabric interconnect cluster.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the initial setup configuration is correct on both fabric interconnects.
2. Verify that the L1 and L2 links are properly connected between the fabric interconnects.
3. Verify that the IOMs and/or FEXes are reachable and the server ports are enabled and operationally up.
4. Verify that the chassis and/or rack servers are powered up and reachable
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltMgmtEntityVersion-incompatible

Fault Code: F1121

Message: Fabric Interconnect [id], management services, incompatible versions

Explanation: This fault occurs if the Cisco FPR Manager software on the subordinate fabric interconnect is not the same release as that of the primary fabric interconnect. This impacts the full HA functionality of the fabric interconnect cluster.

Recommended Action: If you see this fault, take the following actions:

1. Upgrade the Cisco FPR Manager software on the subordinate fabric interconnect to the same release as the primary fabric interconnect and verify that both fabric interconnects are running the same release of Cisco FPR Manager.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltMgmtEntityHa-ssh-keys-mismatched

Fault Code: F1125

Message: Fabric Interconnect [id], management services, mismatched SSH keys

Explanation: This fault indicates that one of the following scenarios has occurred:

- The internal SSH keys used for HA in the cluster configuration are mismatched. This causes certain operations to fail.
- Another fabric interconnect is connected to the primary fabric interconnect in the cluster without first erasing the existing configuration in the primary.

Recommended Action: If you see this fault, take the following actions:

1. Log into the Cisco FPR Manager CLI on the subordinate fabric interconnect.
2. Enter **connect local-mgmt**
3. When the secondary fabric interconnect has rebooted, reconfigure it for the cluster.
4. Enter **erase configuration** to erase the configuration on the subordinate fabric interconnect and reboot it.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltSysdebugMEpLogMEpLogVeryLow

Fault Code: F1128

Message: Log capacity on [side] IOM [chassisId]/[id] is [capacity]Log capacity on Management Controller on server [chassisId]/[slotId] is [capacity]Log capacity on Management Controller on server [id] is [capacity]

Explanation: This fault typically occurs because Cisco FPR Manager has detected that the system event log (SEL) on the server is almost full. The available capacity in the log is very low. This is an info-level fault and can be ignored if you do not want to clear the SEL at this time.

Recommended Action: If you see this fault, you can clear the SEL in Cisco FPR Manager if desired.

fltSysdebugMEpLogMEpLogFull

Fault Code: F1129

Message: Log capacity on [side] IOM [chassisId]/[id] is [capacity]Log capacity on Management Controller on server [chassisId]/[slotId] is [capacity]Log capacity on Management Controller on server [id] is [capacity]

Explanation: This fault typically occurs because Cisco FPR Manager could not transfer the SEL file to the location specified in the SEL policy. This is an info-level fault and can be ignored if you do not want to clear the SEL at this time.

Recommended Action: If you see this fault, take the following actions:

1. Verify the configuration of the SEL policy to ensure that the location, user, and password provided are correct.
2. If you do want to transfer and clear the SEL and the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltSysdebugMEpLogTransferError

Fault Code: F1130

Message: Server [chassisId]/[slotId] [type] transfer failed: [operState]Server [id] [type] transfer failed: [operState]

Explanation: This fault occurs when the transfer of a managed endpoint log file, such as the SEL, fails.

Recommended Action: If you see this fault, take the following actions:

1. If the fault is related to the SEL, verify the connectivity to the CIMC on the server.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltMgmtIfMisConnect

Fault Code: F1131

Message: Management Port [id] in server [id] is mis connected

Explanation: This fault occurs when the server and FEX connectivity changes.

Recommended Action: If you see this fault, take the following actions:

1. Check the connectivity between the server and FEX.
2. If the connectivity was changed by mistake, restore it to its previous configuration.
3. If the connectivity change was intentional, reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltMgmtIfNew

Fault Code: F1133

Message: New connection discovered on Management Port [id] in server [id]

Explanation: This fault occurs when the connectivity between a server and a FEX is added or changed.

Recommended Action: If you see this fault, take the following actions:

1. Check the connectivity between the server and FEX.
2. If the connectivity was changed by mistake, restore it to its previous configuration.
3. If the connectivity change was intentional, reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltMgmtConnectionDisabled

Fault Code: F1134

Message: Management Connection [type] in server [id] is not operational

Explanation: This fault occurs when multiple management connections are acknowledegd.

Recommended Action: If you see this fault, take the following actions:

1. Disable the management connection which is unused.
2. If new management connection needs to be used, decommission and recommission server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltMgmtConnectionUnsupportedConnectivity

Fault Code: F1136

Message: Unsupported connectivity for management connection [type] in server [id]

Explanation: This fault typically occurs because Cisco FPR Manager has detected that the physical connectivity of the management port of the server is unsupported.

Recommended Action: If you see this fault, take the following actions:

1. Connect the management port/s of the rack mount server to the Fabric Extender/s
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltPortPloLink-down

Fault Code: F1150

Message: [transport] port [portId] on chassis [id] oper state: [operState], reason: [stateQual][transport] port [slotId]/[aggrPortId]/[portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual][transport] port [slotId]/[portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual]

Explanation: This fault occurs when a fabric interconnect port is in link-down state. This state impacts the traffic destined for the port.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the physical link is properly connected between the fabric interconnect and the peer component.
2. Verify that the configuration on the peer entity is properly configured and matches the fabric interconnect port configuration.
3. Unconfigure and re-configure the port.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

```

fltPortPIoFailed

Fault Code: F1151

Message: [transport] port [portId] on chassis [id] oper state: [operState], reason: [stateQual][transport] port [slotId]/[aggrPortId]/[portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual][transport] port [slotId]/[portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual]

Explanation: This fault is raised on fabric interconnect ports and on server-facing ports on an IOM or a FEX module when FPRM detects that the port is not up and in failed state while it is expected to be up since it has been enabled by user and there is no known hardware failure or missing SFP issue and port license is valid. Additional reason is displayed by the fault description string.

Recommended Action: If you see this fault, Corrective action maybe taken based on reason information in the fault description whenever such a reason is displayed. If the fault description displays reason as "ENM source pinning failed" then it means that the fabric interconnect is operating in End-host Node Mode and the uplink port that this server facing port is pinned to is down or does not have appropriate VLAN configured. In case of such an error for an appliance port check the VLAN configuration on uplink port. A VLAN with same id as the one on the appliance port will also need to be configured on the uplink port. After setting the configuration right if you still see the fault then create a **show tech-support** file for Cisco FPR Manager and the chassis or FEX module, and then contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: port-failed
mibFaultCode: F1151

fltPortPIoSfp-not-present

Fault Code: F1153

Message: [transport] port [portId] on chassis [id] oper state: [operState][transport] port [slotId]/[aggrPortId]/[portId] on fabric interconnect [id] oper state: [operState][transport] port [slotId]/[portId] on fabric interconnect [id] oper state: [operState]

Explanation: When a fabric interconnect port is not in an unconfigured state, an SFP is required for its operation. This fault is raised to indicate that the SFP is missing from a configured port.

Recommended Action: If you see this fault, insert a supported SFP into the port on the fabric interconnect. A list of supported SFPs can be found on www.Cisco.com.

Fault Details

fltFabricExternalPcDown

Fault Code: F1156

Message: [type] port-channel [portId] on fabric interconnect [switchId] oper state: [operState], reason: [stateQual][type] port-channel [portId] on fabric interconnect [switchId] oper state: [operState], reason: [stateQual]

Explanation: This fault typically occurs when a fabric interconnect reports that a fabric port channel is operationally down.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the member ports in the fabric port channel are administratively up and operational. Check the link connectivity for each port.
2. If connectivity seems correct, check the operational states on the peer switch ports of the port channel members.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltFabricInternalPcDown

Fault Code: F1157

Message: [type] port-channel [portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual]

Explanation: This fault occurs when the transport VIF for a server is down. Cisco FPR Manager raises this fault when a fabric interconnect reports the connectivity state on virtual interface as one of the following:

- Down
- Errored
- Unavailable

Recommended Action: If you see this fault, take the following actions:

1. Verify that the blade server discovery was successful.
2. Check the states on all communicating ports from end to end.
3. If connectivity seems correct, decommission and recommission the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: operational-state-down
mibFaultCode: F1157
mibFaultName: fltFabricInternalPcDown
moClass: fabric:InternalPc
Type: network
autoCleared: true
Affected MO: fabric/server/sw-[id]/pc-[portId]
```

fltDcxVcDown

Fault Code: F1158

Message: [transport] VIF [id] on server [chassisId] / [slotId] of switch [switchId] down, reason: [stateQual][transport] VIF [id] on server [id] of switch [switchId] down, reason: [stateQual]

Explanation: This fault typically occurs when a fabric interconnect reports one of the following connectivity states for a virtual interface:

- Down
- Errored
- Unavailable

Recommended Action: If you see this fault, take the following actions:

1. Verify that the uplink physical interface is up.
2. If the vNIC/vHBA is configured for a pin group, verify that the pin group targets are configured correctly.
3. In the Network Control Policy for the vNIC, verify that the 'Action on Uplink Fail' field is set to 'warning'.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltPolicyControlEpSuspendModeActive

Fault Code: F1174

Message: FPRM is suspended from receiving updates from FPR Central.

Explanation: This fault occurs when FPRM enters into suspend state from receiving updates from FPR Central that it is registered with.

Recommended Action: If you see this fault, take the following actions:

1. Please check if FPR Central is restored to a previous version or a policy roll-back has occured. You may have brought FPR in to manual suspension mode by using **set suspendstate on** command under the system->control-ep policy scope.
2. Please confirm the suspend state by using **show control-ep policy detail** under system scope. If you still want to receive the updates from FPR Central, you need to restore it back to a version compatible with FPRM or set the suspend state to off by acknowledging it by using **set ackstate acked** under policy-control scope.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltEquipmentFanModuleFanModuleUnidentified

Fault Code: F1322

Message: Fan module inserted unidentified

Explanation: This fault typically occurs when Cisco FPR Manager can not identify a Fan Tray

Recommended Action: If you see this fault, take the following actions:

1. Verify that the fan tray is properly installed in the chassis.
2. Remove the fan tray and reinstall it.
3. Make sure that a Cisco Firepower fan tray is inserted.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: fan-module-unidentified
mibFaultCode: F1322
mibFaultName: fltEquipmentFanModuleFanModuleUnidentified
moClass: equipment:FanModule
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/fan-module-[tray]-[id]
Affected MO: sys/rack-unit-[id]/fan-module-[tray]-[id]
Affected MO: sys/switch-[id]/fan-module-[tray]-[id]
```

fltEquipmentPsuPsuUnidentified

Fault Code: F1323

Message: Power supply inserted into slot [id] unidentified

Explanation: This fault typically occurs when Cisco FPR Manager can not identify a PSU

Recommended Action: If you see this fault, take the following actions:

1. Verify that the PSU is properly installed in the chassis.
2. Remove the PSU and reinstall it.
3. Make sure that a Cisco Firepower Psu is inserted.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: psu-unidentified
mibFaultCode: F1323
mibFaultName: fltEquipmentPsuPsuUnidentified
moClass: equipment:Psu
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/psu-[id]
Affected MO: sys/fex-[id]/psu-[id]
Affected MO: sys/rack-unit-[id]/psu-[id]
Affected MO: sys/switch-[id]/psu-[id]
```

fltEquipmentPsuPsuFanProblem

Fault Code: F1324

Message: Power supply [id] in chassis [id] Fan Status: [psuFanStatus]Power supply [id] in fabric interconnect [id] Fan Status: [psuFanStatus]Power supply [id] in fex [id] Fan Status: [psuFanStatus]Power supply [id] in server [id] Fan Status: [psuFanStatus]

Explanation: This fault typically occurs when Cisco FPR Manager detects a problem with PSU Fan

Recommended Action: None set.

Fault Details

```
Severity: major
Cause: psu-fan-problem
mibFaultCode: F1324
mibFaultName: fltEquipmentPsuPsuFanProblem
moClass: equipment:Psu
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/psu-[id]

```

fltEquipmentChassisBoot-problem

Fault Code: F1325

Message: Device [id] Boot Status: [bootStatus]

Explanation: This fault occurs in the event that the Chassis Boot Status is not normal

Recommended Action: <@faultExplanation This fault occurs in the unlikely event that the Chassis shared storage (SEEPROM) is not operational. < If you see this fault, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: boot-problem
mibFaultCode: F1325
mibFaultName: fltEquipmentChassisBootProblem
moClass: equipment:Chassis
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentSwitchCardUnsupported

Fault Code: F1326

Message: Switch/EPM card in slot [id] is not supported or recognized

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: critical
Cause: unsupported
mibFaultCode: F1326
mibFaultName: fltEquipmentSwitchCardUnsupported
moClass: equipment:SwitchCard
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]/slot-[id]
```

fltStorageLocalDiskDisk-unidentified

Fault Code: F1328

Message: Disk inserted into slot [id] unidentified

Explanation: This fault typically occurs when Cisco FPR Manager can not identify a storage disk

Recommended Action: If you see this fault, take the following actions:

1. Verify that the storage disk is properly installed in the chassis.
2. Remove the disk and reinstall it.
3. Make sure that a Cisco Firepower storage disk is inserted.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment
mibFaultCode: F1328
mibFaultName: fltStorageLocalDiskDiskUnidentified
moClass: storage:LocalDisk
Type: equipment
autoCleared: true
```

```
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/disk-[id]
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]/disk-[id]
```

fltCommDateTimeCommNtpConfigurationFailed

Fault Code: F1329

Message: Ntp Configuration failed, please check the error message in Ntp host

Explanation: This fault typically occurs because all Ntp configuration failed adn the system is out of sync.

Recommended Action: If you see this fault, take the following actions:

1. Verify that whether at least one Ntp configuration succeeded.

Fault Details

```
Severity: major
Cause: ntp-config-failed
mibFaultCode: F1329
mibFaultName: fltCommDateTimeCommNtpConfigurationFailed
moClass: comm:DateTime
Type: configuration
autoCleared: true
Affected MO: sys/svc-ext/datetime-svc
```

fltFabricMgmtLanPcEpDown

Fault Code: F1353

Message: [type] Member [slotId]/[portId] of Management Port-Channel [portId] on firepower is down, membership: [membership]

Explanation: This fault typically occurs when a member port in a management port channel is down.

Recommended Action: If you see this fault, take the following action:

1. Check the link connectivity on the upstream Ethernet switch.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: membership-down
mibFaultCode: F1353
mibFaultName: fltFabricMgmtLanPcEpDown
moClass: fabric:MgmtLanPcEp
Type: network
autoCleared: true
Affected MO: fabric/lan/[id]/pc-[portId]/ep-port-[portId]
```

fltNpuEventFpgaFatalError

Fault Code: F1356

Message: NPU FPGA raised a FATAL error on pipe [pipe]

Explanation: This fault occurs when NPU FPGA reports a fatal error.

Recommended Action: If you see this fault, take the following actions:

1. Refer to npu_accel_mgr.log and try rebooting the chassis to fix the error.

Fault Details

```
Severity: critical
Cause: npu-fpga-failure
mibFaultCode: F1356
mibFaultName: fltNpuEventFpgaFatalError
moClass: npu:Event
Type: server
autoCleared: true
Affected MO: shaperports-cfg-ep/event-id-[id]-pipe-[pipe]-level-[level]
```

fltNpuEventQdmaFatalError

Fault Code: F1357

Message: NPU QDMA Subsystem raised a FATAL error on pipe [pipe]

Explanation: This fault occurs when QDMA reports a fatal error.

Recommended Action: If you see this fault, take the following actions:

1. Refer to npu_accel_mgr.log and try rebooting the chassis to fix the error.

Fault Details

```
Severity: critical
Cause: npu-qdma-failure
mibFaultCode: F1357
mibFaultName: fltNpuEventQdmaFatalError
moClass: npu:Event
Type: server
autoCleared: true
Affected MO: shaperports-cfg-ep/event-id-[id]-pipe-[pipe]-level-[level]
```

fltTopSystemFailsafe-mode

Fault Code: F1360

Message: System is in failsafe mode: [failsafeReason]

Explanation: This fault is raised when the system enters failsafe mode due to critical errors during boot or operation.

Recommended Action: If you see this fault, take the following actions:

1. Review the failsafe reason to understand what caused the system to enter failsafe mode.
2. Address the underlying issue (e.g., fix configuration errors, resolve boot failures).
3. Run the 'failsafe-exit' command from local-mgmt to exit failsafe mode once the issue is resolved.
4. If the issue persists, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: system-entered-failsafe-mode
mibFaultCode: F1360
mibFaultName: fltTopSystemFailsafeMode
moClass: top:System
Type: operational
autoCleared: true
Affected MO: sys
```

fltStorageLocalDiskThermalThresholdCritical

Fault Code: F1363

Message: SSD thermal state is [thermal]. [faultMsg]

Explanation: This fault occurs when the SSD temperature exceeds upper threshold limit

Recommended Action: None set.

Fault Details

```
Severity: critical
Cause: thermal-problem
mibFaultCode: F1363
mibFaultName: fltStorageLocalDiskThermalThresholdCritical

Type: configuration
autoCleared: true
Affected MO: sys/device-manager-[name]
```

fltCommSshcEncryptAlgoInvalid

Fault Code: F1379

Message: Encryption algorithm [cliEncryptAlgo] is not supported when CC mode is enabled.

Explanation: This fault typically when 3des-cbc and chacha20-poly1305_openssh_com algo is enabled in cc-mode.

Recommended Action: If you see this fault, take the following actions:

1. Verify that encryptAlgo$ is not supported when CC mode is enabled.

Fault Details

```
Severity: major
Cause: encryption-algo-not-supported
mibFaultCode: F1379
mibFaultName: fltCommSshcEncryptAlgoInvalid
moClass: comm:Sshc
Type: configuration
autoCleared: true
Affected MO: sys/svc-ext/sshc-svc
```

fltIpsecConnectionIpsecConnInvalidKey

Fault Code: F1380

Message: Invalid keyring [keyring] for IPSec connection [name]

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: major
Cause: ipsec-config-error
mibFaultCode: F1380
mibFaultName: fltIpsecConnectionIpsecConnInvalidKey
moClass: ipsec:Connection
Type: configuration
autoCleared: true
Affected MO: sys/ipsec-ext/conn-[name]
```

fltIpsecConnectionIpsecConnInvalidCert

Fault Code: F1381

Message: Invalid Cert of keyring [keyring] for IPSec connection [name]

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: major
Cause: ipsec-config-error
mibFaultCode: F1381
mibFaultName: fltIpsecConnectionIpsecConnInvalidCert
moClass: ipsec:Connection
Type: configuration
autoCleared: true
Affected MO: sys/ipsec-ext/conn-[name]
```

fltIpsecAuthorityIpsecAuthorInvalidTp

Fault Code: F1382

Message: Invalid trustpoint [tpName] for IPSec

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: major
Cause: ipsec-config-error
mibFaultCode: F1382
mibFaultName: fltIpsecAuthorityIpsecAuthorInvalidTp
moClass: ipsec:Authority
Type: configuration
autoCleared: true
Affected MO: sys/ipsec-ext/author-[tpName]
```

fltNetworkEthLanMgmtFailed

Fault Code: F1390

Message: [name] interface is down!

Explanation: This fault is raised on management interface link down.

Recommended Action: If you see this fault, please make sure the management interface is enabled, and the wire is properly connected.

Fault Details

```
Severity: major
Cause: port-failed
mibFaultCode: F1390
mibFaultName: fltNetworkEthLanMgmtFailed
moClass: network:EthLanMgmt
Type: network
autoCleared: true
Affected MO: sys/switch-[id]/mgmt-port-[portId]
```

fltEquipmentChassisMixed-ac-and-dc-psu

Fault Code: F1392

Message: Chassis [id] has an invalid PSU configuration (AC+DC)

Explanation: This fault typically occurs because Cisco FPR Manager has detected AC + DC PSU combination usage (which is unsupported).

Recommended Action: If you see this fault, take the following actions:

1. Remove one of PSU modules or change it to compatible.
2. If the above action did not resolve the issue, execute the **show tech-support** command and contact Cisco technical support.

Fault Details

```
Severity: major
Cause: mixed-ac-and-dc-psu
mibFaultCode: F1392
mibFaultName: fltEquipmentChassisMixedAcAndDcPsu
moClass: equipment:Chassis
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentSwitchCardMismatch

Fault Code: F1393

Message: EPM card in slot [id] mismatch the previous EPM card, reboot required

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: critical
Cause: unsupported
mibFaultCode: F1393
mibFaultName: fltEquipmentSwitchCardMismatch
moClass: equipment:SwitchCard
```

```
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]/slot-[id]
```

fltFirmwareRommonInfoFpgaGoldenTooOld

Fault Code: F1398

Message: FPGA Golden Version [fpgaGoldenVersion] must be upgraded to Version [fpgaGoldenRequiredVersion] or newer.

Explanation: This fault occurs when FPGA Golden Image is older than expected.

Recommended Action: If you see this fault, troubleshoot the firmware upgrade process.

Fault Details

```
Severity: major
Cause: fpga-golden-failed-upgrade
mibFaultCode: F1398
mibFaultName: fltFirmwareRommonInfoFpgaGoldenTooOld
moClass: firmware:RommonInfo
Type: management
autoCleared: true
Affected MO: sys/fw-system/fw-rommoninfo
```

fltFirmwareRommonInfoExtCrntRommonFail

Fault Code: F1399

Message: Current Rommon [crntRommonId] is running in L1 mode, need to re-install the Rommon firmware.

Explanation: This fault occurs when current Rommon is running in L1 mode.

Recommended Action: If you see this fault, troubleshoot the firmware upgrade process.

Fault Details

```
Severity: critical
Cause: crnt-rommon-in-l1-mode
mibFaultCode: F1399

Type: server
autoCleared: true
Affected MO: sec-svc/slot-[slotId]/app-inst-[appName]-[identifier]
```

fltSmAppInstance2AppInstallFailed

Fault Code: F1416

Message: Failed to install App Instance [appName] on slot [slotId]. Error: [errorMsg]

Explanation: This fault occurs when an app instance installation fails.

Recommended Action: None set.

Fault Details

```
Severity: major
Cause: appinstance-install-failed
mibFaultCode: F1416
mibFaultName: fltSmAppInstance2AppInstallFailed
moClass: sm:AppInstance2
Type: server
autoCleared: true
Affected MO: sec-svc/slot-[slotId]/app-inst-[appName]-[identifier]
```

fltSmAppInstance2AppStartFailed

Fault Code: F1417

Message: Failed to start App Instance [appName] on slot [slotId]. Error: [errorMsg]

Explanation: This fault occurs when an app instance start fails.

Recommended Action: None set.

Fault Details

```
Severity: major
Cause: appinstance-start-failed
mibFaultCode: F1417
mibFaultName: fltSmAppInstance2AppStartFailed
moClass: sm:AppInstance2
Type: server
autoCleared: true
Affected MO: sec-svc/slot-[slotId]/app-inst-[appName]-[identifier]
```

fltSmAppInstance2AppUpdateFailed

Fault Code: F1418

Message: Failed to update App Instance [appName] on slot [slotId]. Error: [errorMsg]

Explanation: This fault occurs when an app instance updation fails.

Recommended Action: None set.

Fault Details

```
Severity: major
Cause: appinstance-update-failed
mibFaultCode: F1418
mibFaultName: fltSmAppInstance2AppUpdateFailed
moClass: sm:AppInstance2
Type: server
autoCleared: true
Affected MO: sec-svc/slot-[slotId]/app-inst-[appName]-[identifier]
```

fltSmAppInstance2AppStopFailed

Fault Code: F1419

Message: Failed to stop App Instance [appName] on slot [slotId]. Error: [errorMsg]

Explanation: This fault occurs when an app instance stop fails.

Recommended Action: None set.

Fault Details

```
Severity: major
Cause: appinstance-stop-failed
mibFaultCode: F1419
mibFaultName: fltSmAppInstance2AppStopFailed
moClass: sm:AppInstance2

Affected MO: sec-svc/slot-[slotId]/app-inst-[appName]-[identifier]
```

fltSmAppInstance2AppInstanceErrorMajor

Fault Code: F1422

Message: Error in App Instance [appName]. [errorMsg]

Explanation: This fault occurs when an app instance is in a non-terminal error state.

Recommended Action: None set.

Fault Details

```
Severity: major
Cause: appinstance-error
mibFaultCode: F1422
mibFaultName: fltSmAppInstance2AppInstanceErrorMajor
moClass: sm:AppInstance2
Type: server
autoCleared: true
Affected MO: sec-svc/slot-[slotId]/app-inst-[appName]-[identifier]
```

fltSmAppInstance2AppFaultState

Fault Code: F1423

Message: AppInstance [appName]-[identifier] with version [runningVersion] on slot [slotId] is in failed state. Error: [errorMsg]

Explanation: This fault occurs when AppInstance is in "fault" state.

Recommended Action: None set.

Fault Details

```
Severity: major
Cause: appinstance-fault-state
mibFaultCode: F1423
mibFaultName: fltSmAppInstance2AppFaultState
moClass: sm:AppInstance2
Type: server
autoCleared: true
Affected MO: sec-svc/slot-[slotId]/app-inst-[appName]-[identifier]
```

fltSmAppInstance2AppInstanceUnsupported

Fault Code: F1424

Message: App Instance [appName] on slot [slotId] is not supported in the current bundle. Error: [errorMsg]

Explanation: This fault occurs when an app instance is not supported in the current platform bundle

Recommended Action: None set.

Fault Details

```
Severity: major
Cause: appinstance-unsupported
mibFaultCode: F1424
mibFaultName: fltSmAppInstance2AppInstanceUnsupported
moClass: sm:AppInstance2
Type: server
autoCleared: true
Affected MO: sec-svc/slot-[slotId]/app-inst-[appName]-[identifier]
```

fltSmAppAppImageCorrupted

Fault Code: F1425

Message: The application image [appId] is corrupted

Explanation: This fault occurs when an application meta data cannot be reloaded.

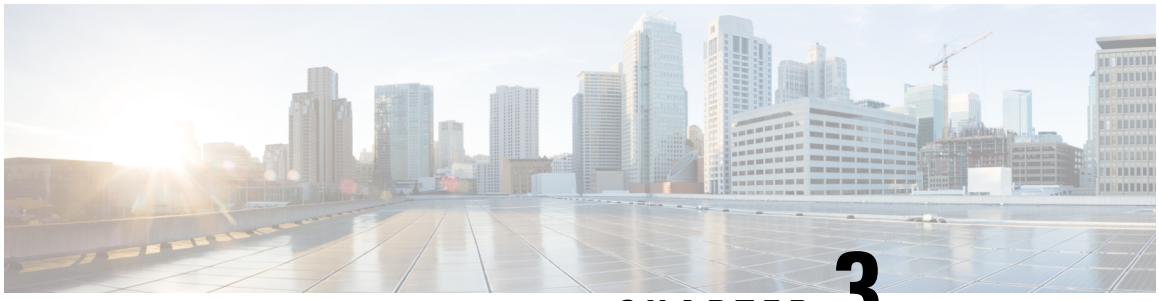

Recommended Action: If you see this fault, take the following actions:

1. Re-download the application from a trusted source

Fault Details

```
Severity: major
Cause: app-img-corrupted
mibFaultCode: F1425
mibFaultName: fltSmAppAppImageCorrupted
```

moClass: sm:App
Type: server
autoCleared: true
Affected MO: sec-svc/app-[name]-[version]
Affected MO: sys-secsvc/slot-[slotId]/app-inst-[appInstId]/app-[name]-[version]

CHAPTER 3

FXOS Finite State Machine Faults

This chapter provides information about the faults that may be raised during one or more stages of an FSM task.

Note Unless an FSM fault appears on the Overview page, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

- FXOS Finite State Machine Faults, on page 227

FXOS Finite State Machine Faults

fsmStFailComputeServerDiscPolicyResolveScrubPolicy:Resolve

Fault Code: F16476

Message: [FSM:STAGE:FAILED|RETRY]: Resolving scrub policy(FSM-STAGE:sam:dme:ComputeServerDiscPolicyResolveScrubPolicy:Resolve)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: resolve-failed
mibFaultCode: F16476
mibFaultName: fsmStFailComputeServerDiscPolicyResolveScrubPolicyResolve
moClass: compute:ServerDiscPolicy
Type: fsm
autoCleared: true
Affected MO: org-[name]/server-discovery
```

fsmStFailGmetaHolderInventory:CheckInventoryStatus

Fault Code: F16477

Message: [FSM:STAGE:FAILED|RETRY]: Throttle inventory(FSM-STAGE:sam:dme:GmetaHolderInventory:CheckInventoryStatus)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: check-inventory-status-failed
mibFaultCode: F16477
mibFaultName: fsmStFailGmetaHolderInventoryCheckInventoryStatus
moClass: gmeta:Holder
Type: fsm
autoCleared: true
Affected MO: gmeta/category-[category]-provider-[provider]
```

fsmStFailGmetaHolderInventory:ReportFullInventory

Fault Code: F16477

Message: [FSM:STAGE:FAILED|RETRY]: Report inventory(FSM-STAGE:sam:dme:GmetaHolderInventory:ReportFullInventory)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: report-full-inventory-failed
mibFaultCode: F16477
mibFaultName: fsmStFailGmetaHolderInventoryReportFullInventory
moClass: gmeta:Holder
Type: fsm
autoCleared: true
Affected MO: gmeta/category-[category]-provider-[provider]
```

fsmStFailFirmwareDownloaderDownload:CheckPendingNetworkConfig

Fault Code: F16517

Message: [FSM:STAGE:FAILED|RETRY]: checking pending management network config(FSM-STAGE:sam:dme:FirmwareDownloaderDownload:CheckPendingNetworkConfig)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: check-pending-network-config-failed
mibFaultCode: F16517
mibFaultName: fsmStFailFirmwareDownloaderDownloadCheckPendingNetworkConfig
moClass: firmware:Downloader
Type: fsm
autoCleared: true
```

```
Affected MO: sys/fw-catalogue/dnld-[fileName]
Affected MO: sys/pki-ext/tp-[name]/certrevoke/dnld-[fileName]
```

fsmStFailFirmwareDownloaderDownload:CopyRemote

Fault Code: F16517

Message: [FSM:STAGE:FAILED|RETRY]: sync images to subordinate(FSM-STAGE:sam:dme:FirmwareDownloaderDownload:CopyRemote)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: copy-remote-failed
mibFaultCode: F16517
mibFaultName: fsmStFailFirmwareDownloaderDownloadCopyRemote
moClass: firmware:Downloader
Type: fsm
autoCleared: true
Affected MO: sys/fw-catalogue/dnld-[fileName]
Affected MO: sys/pki-ext/tp-[name]/certrevoke/dnld-[fileName]
```

fsmStFailFirmwareDownloaderDownload:DeleteExtraImages

Fault Code: F16517

Message: [FSM:STAGE:FAILED|RETRY]: deleting extra distributable images(FSM-STAGE:sam:dme:FirmwareDownloaderDownload:DeleteExtraImages)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: delete-extra-images-failed
mibFaultCode: F16517
mibFaultName: fsmStFailFirmwareDownloaderDownloadDeleteExtraImages
moClass: firmware:Downloader
Type: fsm
autoCleared: true
Affected MO: sys/fw-catalogue/dnld-[fileName]
Affected MO: sys/pki-ext/tp-[name]/certrevoke/dnld-[fileName]
```

fsmStFailFirmwareDownloaderDownload:DeleteLocal

Fault Code: F16517

Message: [FSM:STAGE:FAILED|RETRY]: deleting downloadable [fileName] on local(FSM-STAGE:sam:dme:FirmwareDownloaderDownload:DeleteLocal)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: delete-local-failed
mibFaultCode: F16517
mibFaultName: fsmStFailFirmwareDownloaderDownloadDeleteLocal
moClass: firmware:Downloader
Type: fsm
autoCleared: true
Affected MO: sys/fw-catalogue/dnld-[fileName]
Affected MO: sys/pki-ext/tp-[name]/certrevoke/dnld-[fileName]
```

fsmStFailFirmwareDownloaderDownload:FreeDiskSpace

Fault Code: F16517

Message: [FSM:STAGE:FAILED|RETRY]: Free up disk space before downloading image(FSM-STAGE:sam:dme:FirmwareDownloaderDownload:FreeDiskSpace)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: free-disk-space-failed
mibFaultCode: F16517
mibFaultName: fsmStFailFirmwareDownloaderDownloadFreeDiskSpace
moClass: firmware:Downloader
Type: fsm
autoCleared: true
Affected MO: sys/fw-catalogue/dnld-[fileName]
Affected MO: sys/pki-ext/tp-[name]/certrevoke/dnld-[fileName]
```

fsmStFailFirmwareDownloaderDownload:Local

Fault Code: F16517

Message: [FSM:STAGE:FAILED|RETRY]: downloading image [fileName] from [server](FSM-STAGE:sam:dme:FirmwareDownloaderDownload:Local)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: local-failed
mibFaultCode: F16517
mibFaultName: fsmStFailFirmwareDownloaderDownloadLocal
moClass: firmware:Downloader
Type: fsm
autoCleared: true
Affected MO: sys/fw-catalogue/dnld-[fileName]
Affected MO: sys/pki-ext/tp-[name]/certrevoke/dnld-[fileName]
```

fsmStFailFirmwareDownloaderDownload:UnpackLocal

Fault Code: F16517

Message: [FSM:STAGE:FAILED|RETRY]: unpacking image [fileName] on primary(FSM-STAGE:sam:dme:FirmwareDownloaderDownload:UnpackLocal)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: unpack-local-failed
mibFaultCode: F16517
mibFaultName: fsmStFailFirmwareDownloaderDownloadUnpackLocal
moClass: firmware:Downloader
Type: fsm
autoCleared: true
Affected MO: sys/fw-catalogue/dnld-[fileName]
Affected MO: sys/pki-ext/tp-[name]/certrevoke/dnld-[fileName]
```

fsmStFailFirmwareImageDelete:Local

Fault Code: F16518

Message: [FSM:STAGE:FAILED|RETRY]: deleting image file [name] ([invTag]) from primary(FSM-STAGE:sam:dme:FirmwareImageDelete:Local)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: local-failed
mibFaultCode: F16518
mibFaultName: fsmStFailFirmwareImageDeleteLocal
moClass: firmware:Image

moClass: ls:Server
Type: fsm
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fsmStFailLsServerConfigure:ApplyPolicies

Fault Code: F16770

Message: [FSM:STAGE:FAILED|RETRY]: Resolving and applying policies(FSM-STAGE:sam:dme:LsServerConfigure:ApplyPolicies)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: apply-policies-failed
mibFaultCode: F16770
mibFaultName: fsmStFailLsServerConfigureApplyPolicies
moClass: ls:Server
Type: fsm
```

```
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fsmStFailLsServerConfigure:ApplyTemplate

Fault Code: F16770

Message: [FSM:STAGE:FAILED|RETRY]: Applying configuration template [srcTemplName](FSM-STAGE:sam:dme:LsServerConfigure:ApplyTemplate)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: apply-template-failed
mibFaultCode: F16770
mibFaultName: fsmStFailLsServerConfigureApplyTemplate
moClass: ls:Server
Type: fsm
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fsmStFailLsServerConfigure:CommitStorage

Fault Code: F16770

Message: [FSM:STAGE:FAILED|RETRY]: committing storage for service profile(FSM-STAGE:sam:dme:LsServerConfigure:CommitStorage)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: commit-storage-failed
mibFaultCode: F16770
mibFaultName: fsmStFailLsServerConfigureCommitStorage
moClass: ls:Server
Type: fsm
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fsmStFailLsServerConfigure:EvaluateAssociation

Fault Code: F16770

Message: [FSM:STAGE:FAILED|RETRY]: Evaluate association with server [pnDn](FSM-STAGE:sam:dme:LsServerConfigure:EvaluateAssociation)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: evaluate-association-failed
mibFaultCode: F16770
mibFaultName: fsmStFailLsServerConfigureEvaluateAssociation
moClass: ls:Server

fsmStFailSysdebugLogExportPolicyConfigure:Peer

Fault Code: F17266

Message: [FSM:STAGE:FAILED|RETRY]: configuring log file export service on peer(FSM-STAGE:sam:dme:SysdebugLogExportPolicyConfigure:Peer)

Explanation: Cisco Firepower Manager could not set the configurations in the subordinate Fabric Interconnect (FI) for log file transfer to remote server. This fault typically appears for one of the following reasons:

- The subordinate FI is not reachable.
- The subordinate FI is experiencing an internal system error on applying the configuration.

Recommended Action: If you see this fault, take the following actions:

1. Check the FI cluster state to ensure that the subordinate FI is reachable and functioning correctly. If the subordinate FI is down, take appropriate corrective actions so that the Firepower cluster goes into HA ready state.
2. If the HA state of the primary and subordinate FIs are good, execute the show tech-support command and contact Cisco Technical Support.

fsmRmtErrFirmwareSystemDeploy:PollDeleteCurrentApplicationStatus

Fault Code: F77964

Message: [FSM:STAGE:REMOTE-ERROR]: Wait for Current Application Deletion to complete(FSM-STAGE:sam:dme:FirmwareSystemDeploy:PollDeleteCurrentApplicationStatus)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: poll-delete-current-application-status-failed
mibFaultCode: F77964
mibFaultName: fsmRmtErrFirmwareSystemDeployPollDeleteCurrentApplicationStatus
moClass: firmware:System
Type: fsm
autoCleared: true
Affected MO: sys/fw-system
```

fsmRmtErrFirmwareSystemDeploy:PollManagerActivationStatus

Fault Code: F77964

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for Service Manager Activation to complete(FSM-STAGE:sam:dme:FirmwareSystemDeploy:PollManagerActivationStatus)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: poll-manager-activation-status-failed
mibFaultCode: F77964
mibFaultName: fsmRmtErrFirmwareSystemDeployPollManagerActivationStatus
moClass: firmware:System
Type: fsm
autoCleared: true
Affected MO: sys/fw-system
```

fsmRmtErrFirmwareSystemDeploy:PollNpuActivationStatus

Fault Code: F77964

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for NPU Image Activation to complete(FSM-STAGE:sam:dme:FirmwareSystemDeploy:PollNpuActivationStatus)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: poll-npu-activation-status-failed
mibFaultCode: F77964
mibFaultName: fsmRmtErrFirmwareSystemDeployPollNpuActivationStatus
moClass: firmware:System
Type: fsm
autoCleared: true
Affected MO: sys/fw-system
```

fsmRmtErrFirmwareSystemDeploy:PollStartupServiceManagerStatus

Fault Code: F77964

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for Setting Service Manager Startup Version to complete(FSM-STAGE:sam:dme:FirmwareSystemDeploy:PollStartupServiceManagerStatus)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: poll-startup-service-manager-status-failed
mibFaultCode: F77964
mibFaultName: fsmRmtErrFirmwareSystemDeployPollStartupServiceManagerStatus
```

```
moClass: firmware:System
Type: fsm
autoCleared: true
Affected MO: sys/fw-system
```

fsmRmtErrFirmwareSystemDeploy:PollSystemActivationStatus

Fault Code: F77964

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for System Activation to complete(FSM-STAGE:sam:dme:FirmwareSystemDeploy:PollSystemActivationStatus)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: poll-system-activation-status-failed
mibFaultCode: F77964
mibFaultName: fsmRmtErrFirmwareSystemDeployPollSystemActivationStatus
moClass: firmware:System
Type: fsm
autoCleared: true
Affected MO: sys/fw-system
```

fsmRmtErrFirmwareSystemDeploy:RebootSystemForImageUpgrade

Fault Code: F77964

Message: [FSM:STAGE:REMOTE-ERROR]: Activating System Image(FSM-STAGE:sam:dme:FirmwareSystemDeploy:RebootSystemForImageUpgrade)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: reboot-system-for-image-upgrade-failed
mibFaultCode: F77964
mibFaultName: fsmRmtErrFirmwareSystemDeployRebootSystemForImageUpgrade
moClass: firmware:System
Type: fsm
autoCleared: true
Affected MO: sys/fw-system
```

fsmRmtErrFirmwareSystemDeploy:SetStartupServiceManagerVersion

Fault Code: F77964

Message: [FSM:STAGE:REMOTE-ERROR]: Setting Service Manager Startup Version(FSM-STAGE:sam:dme:FirmwareSystemDeploy:SetStartupServiceManagerVersion)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: set-startup-service-manager-version-failed
mibFaultCode: F77964
mibFaultName: fsmRmtErrFirmwareSystemDeploySetStartupServiceManagerVersion
moClass: firmware:System
Type: fsm
autoCleared: true
Affected MO: sys/fw-system
```

fsmRmtErrFirmwareSystemDeploy:ValidateApplicationPack

Fault Code: F77964

Message: [FSM:STAGE:REMOTE-ERROR]: Validating the application pack(FSM-STAGE:sam:dme:FirmwareSystemDeploy:ValidateApplicationPack)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: validate-application-pack-failed
mibFaultCode: F77964
mibFaultName: fsmRmtErrFirmwareSystemDeployValidateApplicationPack
moClass: firmware:System
Type: fsm
autoCleared: true
Affected MO: sys/fw-system
```

fsmRmtErrFirmwareSystemDeploy:WaitForDeploy

Fault Code: F77964

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for Deploy to begin(FSM-STAGE:sam:dme:FirmwareSystemDeploy:WaitForDeploy)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: wait-for-deploy-failed
mibFaultCode: F77964
mibFaultName: fsmRmtErrFirmwareSystemDeployWaitForDeploy
moClass: firmware:System
Type: fsm
autoCleared: true
Affected MO: sys/fw-system
```

fsmRmtErrFirmwareSystemDeploy:WaitForSystemReady

Fault Code: F77964

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for System Ready(FSM-STAGE:sam:dme:FirmwareSystemDeploy:WaitForSystemReady)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: wait-for-system-ready-failed
mibFaultCode: F77964
mibFaultName: fsmRmtErrFirmwareSystemDeployWaitForSystemReady
moClass: firmware:System
Type: fsm
autoCleared: true
Affected MO: sys/fw-system
```

fsmRmtErrFirmwareSupFirmwareDeploy:ActivateFirmwarePack

Fault Code: F77965

Message: [FSM:STAGE:REMOTE-ERROR]: Activating SUP Firmware(FSM-STAGE:sam:dme:FirmwareSupFirmwareDeploy:ActivateFirmwarePack)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: activate-firmware-pack-failed
mibFaultCode: F77965
mibFaultName: fsmRmtErrFirmwareSupFirmwareDeployActivateFirmwarePack
moClass: firmware:SupFirmware
Type: fsm
autoCleared: true
Affected MO: sys/fw-supfirmware
```

fsmRmtErrFirmwareSupFirmwareDeploy:CompleteFirmwareUpgrade

Fault Code: F77965

Message: [FSM:STAGE:REMOTE-ERROR]: Complete Firmware Pack Upgrade(FSM-STAGE:sam:dme:FirmwareSupFirmwareDeploy:CompleteFirmwareUpgrade)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: complete-firmware-upgrade-failed
mibFaultCode: F77965
mibFaultName: fsmRmtErrFirmwareSupFirmwareDeployCompleteFirmwareUpgrade
moClass: firmware:SupFirmware
Type: fsm
autoCleared: true
Affected MO: sys/fw-supfirmware
```

fsmRmtErrFirmwareSupFirmwareDeploy:DebundlePort

Fault Code: F77965

Message: [FSM:STAGE:REMOTE-ERROR]: Debundle the ports(FSM-STAGE:sam:dme:FirmwareSupFirmwareDeploy:DebundlePort)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: debundle-port-failed
mibFaultCode: F77965
mibFaultName: fsmRmtErrFirmwareSupFirmwareDeployDebundlePort
moClass: firmware:SupFirmware
Type: fsm
autoCleared: true
Affected MO: sys/fw-supfirmware
```

fsmRmtErrFirmwareSupFirmwareDeploy:PollActivateOfFirmwarePack

Fault Code: F77965

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for Firmware Activation to complete(FSM-STAGE:sam:dme:FirmwareSupFirmwareDeploy:PollActivateOfFirmwarePack)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: poll-activate-of-firmware-pack-failed
mibFaultCode: F77965
mibFaultName: fsmRmtErrFirmwareSupFirmwareDeployPollActivateOfFirmwarePack
moClass: firmware:SupFirmware
Type: fsm
autoCleared: true
Affected MO: sys/fw-supfirmware
```

fsmRmtErrFirmwareSupFirmwareDeploy:PollDebundlePort

Fault Code: F77965

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for Ports debundle complete(FSM-STAGE:sam:dme:FirmwareSupFirmwareDeploy:PollDebundlePort)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: poll-debundle-port-failed
mibFaultCode: F77965
mibFaultName: fsmRmtErrFirmwareSupFirmwareDeployPollDebundlePort
```

```
moClass: firmware:SupFirmware
Type: fsm
autoCleared: true
Affected MO: sys/fw-supfirmware
```

fsmRmtErrFirmwareSupFirmwareDeploy:UpdateImageVersion

Fault Code: F77965

Message: [FSM:STAGE:REMOTE-ERROR]: Updating Image Version(FSM-STAGE:sam:dme:FirmwareSupFirmwareDeploy:UpdateImageVersion)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: update-image-version-failed
mibFaultCode: F77965
mibFaultName: fsmRmtErrFirmwareSupFirmwareDeployUpdateImageVersion
moClass: firmware:SupFirmware
Type: fsm
autoCleared: true
Affected MO: sys/fw-supfirmware
```

fsmRmtErrFirmwareSupFirmwareDeploy:UpdatePackageVersion

Fault Code: F77965

Message: [FSM:STAGE:REMOTE-ERROR]: Updating Package Version(FSM-STAGE:sam:dme:FirmwareSupFirmwareDeploy:UpdatePackageVersion)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: update-package-version-failed
mibFaultCode: F77965
mibFaultName: fsmRmtErrFirmwareSupFirmwareDeployUpdatePackageVersion
moClass: firmware:SupFirmware
Type: fsm
autoCleared: true
Affected MO: sys/fw-supfirmware
```

fsmRmtErrFirmwareSupFirmwareDeploy:ValidateFirmwarePack

Fault Code: F77965

Message: [FSM:STAGE:REMOTE-ERROR]: Validate the firmware pack(FSM-STAGE:sam:dme:FirmwareSupFirmwareDeploy:ValidateFirmwarePack)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: validate-firmware-pack-failed
mibFaultCode: F77965
mibFaultName: fsmRmtErrFirmwareSupFirmwareDeployValidateFirmwarePack
moClass: firmware:SupFirmware
Type: fsm
autoCleared: true
Affected MO: sys/fw-supfirmware
```

fsmRmtErrFirmwareSupFirmwareDeploy:WaitForDeploy

Fault Code: F77965

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for Deploy to begin(FSM-STAGE:sam:dme:FirmwareSupFirmwareDeploy:WaitForDeploy)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: wait-for-deploy-failed
mibFaultCode: F77965
mibFaultName: fsmRmtErrFirmwareSupFirmwareDeployWaitForDeploy
moClass: firmware:SupFirmware
Type: fsm
autoCleared: true
Affected MO: sys/fw-supfirmware
```

fsmRmtErrFirmwareSupFirmwareDeploy:WaitForFirmwareVersionUpdate

Fault Code: F77965

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for Firmware Version to update(FSM-STAGE:sam:dme:FirmwareSupFirmwareDeploy:WaitForFirmwareVersionUpdate)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: wait-for-firmware-version-update-failed
mibFaultCode: F77965
mibFaultName: fsmRmtErrFirmwareSupFirmwareDeployWaitForFirmwareVersionUpdate
moClass: firmware:SupFirmware
Type: fsm
autoCleared: true
Affected MO: sys/fw-supfirmware
```

fsmRmtErrFirmwareSystemApplyCatalogPack:ActivateCatalog

Fault Code: F77966

Message: [FSM:STAGE:REMOTE-ERROR]: Activating Catalog(FSM-STAGE:sam:dme:FirmwareSystemApplyCatalogPack:ActivateCatalog)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: activate-catalog-failed
mibFaultCode: F77966
mibFaultName: fsmRmtErrFirmwareSystemApplyCatalogPackActivateCatalog
moClass: firmware:System
Type: fsm
autoCleared: true
Affected MO: sys/fw-system
```

fsmRmtErrFirmwareSystemApplyCatalogPack:ResolveDistributable

Fault Code: F77966

Message: [FSM:STAGE:REMOTE-ERROR]: Resolve distributable from operations manager(FSM-STAGE:sam:dme:FirmwareSystemApplyCatalogPack:ResolveDistributable)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: resolve-distributable-failed
mibFaultCode: F77966
mibFaultName: fsmRmtErrFirmwareSystemApplyCatalogPackResolveDistributable
moClass: firmware:System
Type: fsm
autoCleared: true
Affected MO: sys/fw-system
```

fsmRmtErrFirmwareSystemApplyCatalogPack:ResolveDistributableNames

Fault Code: F77966

Message: [FSM:STAGE:REMOTE-ERROR]: Resolving distributable name(FSM-STAGE:sam:dme:FirmwareSystemApplyCatalogPack:ResolveDistributableNames)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: resolve-distributable-names-failed
mibFaultCode: F77966
mibFaultName: fsmRmtErrFirmwareSystemApplyCatalogPackResolveDistributableNames
moClass: firmware:System
Type: fsm
autoCleared: true
Affected MO: sys/fw-system
```

fsmRmtErrFirmwareSystemApplyCatalogPack:ResolveImages

Fault Code: F77966

Message: [FSM:STAGE:REMOTE-ERROR]: Resolve images from operations manager(FSM-STAGE:sam:dme:FirmwareSystemApplyCatalogPack:ResolveImages)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: resolve-images-failed
mibFaultCode: F77966
mibFaultName: fsmRmtErrFirmwareSystemApplyCatalogPackResolveImages
moClass: firmware:System
Type: fsm
autoCleared: true
Affected MO: sys/fw-system
```

fsmRmtErrIdentIdentRequestUpdateIdent:Execute

Fault Code: F77968

Message: [FSM:STAGE:REMOTE-ERROR]: Update identities to external identifier manager(FSM-STAGE:sam:dme:IdentIdentRequestUpdateIdent:Execute)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: execute-failed
mibFaultCode: F77968
mibFaultName: fsmRmtErrIdentIdentRequestUpdateIdentExecute
moClass: ident:IdentRequest
Type: fsm
autoCleared: true
Affected MO: metaverse/metasys/IdentQ-[id]
```

fsmRmtErrIdentMetaSystemSync:Execute

Fault Code: F77969

Message: [FSM:STAGE:REMOTE-ERROR]: Synchronise ID universe to external identifier manager(FSM-STAGE:sam:dme:IdentMetaSystemSync:Execute)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: execute-failed
mibFaultCode: F77969

fsmRmtErrSwExtUtilityConfPortBreakout:PortInventorySw

Fault Code: F78121

Message: [FSM:STAGE:REMOTE-ERROR]: Performing port inventory of switch [id](FSM-STAGE:sam:dme:SwExtUtilityConfPortBreakout:PortInventorySw)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: port-inventory-sw-failed
mibFaultCode: F78121
mibFaultName: fsmRmtErrSwExtUtilityConfPortBreakoutPortInventorySw
moClass: sw:ExtUtility
Type: fsm
autoCleared: true
Affected MO: sys/switch-[id]/ext
```

fsmRmtErrSwExtUtilityConfPortBreakout:VerifyBreakoutConfig

Fault Code: F78121

Message: [FSM:STAGE:REMOTE-ERROR]: Verifying physical port breakout config on switch [id](FSM-STAGE:sam:dme:SwExtUtilityConfPortBreakout:VerifyBreakoutConfig)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: verify-breakout-config-failed

mibFaultName: fsmRmtErrSwExtUtilityConfPortBreakoutVerifyBreakoutConfig
moClass: sw:ExtUtility
Type: fsm
autoCleared: true
Affected MO: sys/switch-[id]/ext
```

fsmRmtErrSwFcSanBorderActivateZoneSet:UpdateZones

Fault Code: F78122

Message: [FSM:STAGE:REMOTE-ERROR]: fc zone configuration on [switchId](FSM-STAGE:sam:dme:SwFcSanBorderActivateZoneSet:UpdateZones)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: update-zones-failed
mibFaultCode: F78122
mibFaultName: fsmRmtErrSwFcSanBorderActivateZoneSetUpdateZones
moClass: sw:FcSanBorder
Type: fsm
autoCleared: true
Affected MO: sys/switch-[id]/border-fc
```

fsmRmtErrCallhomeEpConfigCallhome:SetLocal

Fault Code: F78158

Message: [FSM:STAGE:REMOTE-ERROR]: call-home configuration on primary(FSM-STAGE:sam:dme:CallhomeEpConfigCallhome:SetLocal)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: set-local-failed
mibFaultCode: F78158
mibFaultName: fsmRmtErrCallhomeEpConfigCallhomeSetLocal
moClass: callhome:Ep
Type: fsm
autoCleared: true
Affected MO: call-home
```

fsmRmtErrCallhomeEpConfigCallhome:SetPeer

Fault Code: F78158

Message: [FSM:STAGE:REMOTE-ERROR]: call-home configuration on secondary(FSM-STAGE:sam:dme:CallhomeEpConfigCallhome:SetPeer)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: set-peer-failed
mibFaultCode: F78158
mibFaultName: fsmRmtErrCallhomeEpConfigCallhomeSetPeer
moClass: callhome:Ep
Type: fsm
autoCleared: true
Affected MO: call-home
```

fsmRmtErrAdaptorExtEthIfPathReset:Disable

Fault Code: F78167

Message: [FSM:STAGE:REMOTE-ERROR]: Disable path [side]([switchId]) on server [chassisId]/[slotId](FSM-STAGE:sam:dme:AdaptorExtEthIfPathReset:Disable)

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: warning
Cause: disable-failed
mibFaultCode: F78167
mibFaultName: fsmRmtErrAdaptorExtEthIfPathResetDisable
moClass: adaptor:ExtEthIf
Type: fsm
autoCleared: true

fsmRmtErrSysdebugLogExportPolicyConfigure:Local

Fault Code: F78706

Message: [FSM:STAGE:REMOTE-ERROR]: configuring log file export service on local(FSM-STAGE:sam:dme:SysdebugLogExportPolicyConfigure:Local)

Explanation: Cisco Firepower Manager could not set the configurations in the primary Fabric Interconnect for log file transfer to remote server.

Recommended Action: If you see this fault, take the following actions:

1. Execute the show tech-support command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: local-failed
mibFaultCode: F78706
mibFaultName: fsmRmtErrSysdebugLogExportPolicyConfigureLocal
moClass: sysdebug:LogExportPolicy
Type: fsm
autoCleared: true
Affected MO: sys/sysdebug/log-export-policy
```

fsmRmtErrSysdebugLogExportPolicyConfigure:Peer

Fault Code: F78706

Message: [FSM:STAGE:REMOTE-ERROR]: configuring log file export service on peer(FSM-STAGE:sam:dme:SysdebugLogExportPolicyConfigure:Peer)

Explanation: Cisco Firepower Manager could not set the configurations in the subordinate Fabric Interconnect (FI) for log file transfer to remote server. This fault typically appears for one of the following reasons:

- The subordinate FI is not reachable.
- The subordinate FI is experiencing an internal system error on applying the configuration.

Recommended Action: If you see this fault, take the following actions:

1. Check the FI cluster state to ensure that the subordinate FI is reachable and functioning correctly. If the subordinate FI is down, take appropriate corrective actions so that the Firepower cluster goes into HA ready state.
2. If the HA state of the primary and subordinate FIs are good, execute the show tech-support command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: peer-failed
mibFaultCode: F78706

Affected MO: sys/license/file-[scope]:[id]
```

fsmFailLicenseInstanceUpdateFlexlm

Fault Code: F999791

Message: [FSM:FAILED]: sam:dme:LicenseInstanceUpdateFlexlm

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: critical
Cause: fsm-failed
mibFaultCode: F999791
mibFaultName: fsmFailLicenseInstanceUpdateFlexlm
moClass: license:Instance
Type: fsm
autoCleared: true
Affected MO: sys/license/feature-[name]-[vendor]-[version]/inst-[scope]
```

fsmFailLicenseSmartConfigSetConfig

Fault Code: F999792

Message: [FSM:FAILED]: sam:dme:LicenseSmartConfigSetConfig

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: critical
Cause: fsm-failed
mibFaultCode: F999792
mibFaultName: fsmFailLicenseSmartConfigSetConfig
moClass: license:SmartConfig
Type: fsm
autoCleared: true
Affected MO: sys/license/license-config-[operation]
```

fsmFailLsServerConfigure

Fault Code: F999810

Message: [FSM:FAILED]: sam:dme:LsServerConfigure

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: critical
Cause: fsm-failed
mibFaultCode: F999810
mibFaultName: fsmFailLsServerConfigure
moClass: ls:Server
Type: fsm
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fsmFailComputeBladeDiag

Fault Code: F999820

Message: [FSM:FAILED]: sam:dme:ComputeBladeDiag

Explanation: None set.

Recommended Action: None set.

Fault Details

```
Severity: critical
Cause: fsm-failed
mibFaultCode: F999820
mibFaultName: fsmFailComputeBladeDiag
moClass: compute:Blade
Type: fsm
```

autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]

fsmFailMgmtControllerExtMgmtInterfaceConfig

Fault Code: F999843

Message: [FSM:FAILED]: sam:dme:MgmtControllerExtMgmtInterfaceConfig

Explanation: None set.

Recommended Action: None set.

Fault Details

Severity: critical
Cause: fsm-failed
mibFaultCode: F999843
mibFaultName: fsmFailMgmtControllerExtMgmtInterfaceConfig
moClass: mgmt:Controller
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/adaptor-[id]/mgmt

Affected MO: sec-svc/slot-[slotId]/app-inst-[appName]-[identifier]
```

CHAPTER 4

Troubleshooting Transient Faults

Transient faults can occur during initial set up and discovery or when a server or virtual machine starts up. You can typically ignore these transient faults, as FXOS clears them automatically.

This chapter includes the following sections:

- Initial Setup and Discovery Faults, on page 619
- Virtual Machine Startup Faults, on page 620

Initial Setup and Discovery Faults

The following table describes the transient faults that you may see during the initial setup and discovery process. FXOS clears these faults. If you see them during the initial setup or discovery process, you can safely ignore these faults.

Table 5: Transient Faults that Occur during Initial Setup and Discovery Process

Fault Code	Fault Text	Description
F17254	[FSM:STAGE:RETRY:]: user configuration to secondary(FSM-STAGE:sam:dme:AaaUserEpUpdateUserEp:SetUserPeer)	The FSM could not send the user configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.
F17253	[FSM:STAGE:RETRY:]: realm configuration to secondary(FSM-STAGE:sam:dme:AaaRealmUpdateRealm:SetRealmPeer)	The FSM could not send the security configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.
F17252	[FSM:STAGE:RETRY:]: external aaa server configuration to secondary(FSM-STAGE:sam:dme:AaaEpUpdateEp:SetEpPeer)	The FSM could not send the security configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.
F78107	[FSM:STAGE:RETRY:]: internal network configuration on B(FSM-STAGE:sam:dme:SwAccessDomainDeploy:UpdateConnectivity)	The FSM could not send the internal network configuration to the fabric interconnects during the initial cluster configuration or the setup.

Fault Code	Fault Text	Description
F78109	[FSM:STAGE:RETRY:]: Uplink fc port configuration on B(FSM-STAGE:sam:dme:SwFcSanBorderDeploy:UpdateConnectivity)	The FSM could not send the fibre channel uplink configuration to the fabric interconnects during the initial cluster configuration or the setup.
F78933	[FSM:STAGE:RETRY:]: Enable virtual interface on local fabric interconnect	The FSM could not send the virtual interface configuration to the fabric interconnects during the initial cluster configuration or the setup.
F17251	[FSM:STAGE:RETRY:]: keyring configuration on secondary(FSM-STAGE:sam:dme:PkiEpUpdateEp:SetKeyRingPeer)	The FSM could not send the security configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.
F17477	[FSM:STAGE:RETRY:]: Fabric interconnect mode configuration to primary(FSM-STAGE:sam:dme:FabricLanCloudSwitchMode:SwConfigPeer)	The FSM could not send the end-host mode configuration on to the primary fabric interconnect during the initial cluster configuration or the setup.
F16520	[FSM:STAGE:RETRY:]: Identify pre-boot environment agent on server 1/2 (FSM-STAGE:sam:dme:ComputeBladeDiscover:PnuOSIdent)	The FSM failed to identify the pre-boot environment on the server during discovery.

Virtual Machine Startup Faults

When you power on a virtual machine on a server that has network adaptors connected to a distributed virtual wwitch through a port profile, the **Events** tab of the VMware vCenter may display the following event:

```
Virtual machine powered On with vNICs connected to dvPorts that have a
port level configuration, which might be different from the dvPort group
configuration.
```

If you see this event, you can safely ignore it.
